Looks like you fucked up as usual, it wasn't any "accident" on your
part, fucktard.

Like it was when you tried to claim an Alabama ARES website was one for
an ARES organization in West Virginia.....
...

Knock. Knock.

Democrats don't embrace morality, what makes you think they'll embrace honesty in elections. It's a bankrupt party.

That license of yours is pretty special, the FCC doesn't send out CB
licenses anymore except no-code ones. You must be proud.

You should know your callsign by now too. What is it?

I would strongly suggest you check out the reviews for these radios on
eham.net and Amazon.com - the SRIII's switches fall off and the S350
has severe tuning backlash. I opened up the back of the S350, before
returning it to RS (it was not sealed) and I could not believe that
this mostly-hollow piece-of-shit was made by Grundig - but now,
Grundigs are made in China, not Germany. Consumer beware !

Forgot to mention, that the S350's switches have tape on the shafts to
hold them tightly !

The Wellbrook loops are not shielded. The exposed metal is the loop.

The 1530+ high bandwidth version looks ineresting. You could justify
the cost if you use it for FM broadcast. Otherwise, get the ALA 100 and
roll your own loop.

< Snip >

I won't be selling my RX340 anytime soon. The IP3 could be better but I
expect that your friend made the switch for other reasons seeing as he
went for a computer radio. The G313E would be the way I would go if I
had the inclination to purchase a computer based radio.

Well, judging from my ALA1530, which I have partially disassembled,
there is wire running inside the Aluminum so the aluminum is not the
loop. The indoor version doesn't have any aluminum on it either as far
as I can tell, just a plastic outer covering.

But they aren't made by Grundig.

"Grundig" is now a name rented out to companies that want to use
it. So those "Grundig" radios sold in North America are put out
by some other company, who pay for the rights to use the name.

Where the radios are made is fairly irrelevant, where it's designed
is far more important.

Michael

That was a mistake. That Troll usually posts off topic political crap.

> As far as I can tell, having looked at their site several times,
> Wellbrook makes no such claims and points to the loop configuration

The loop configuration is a reason that the antenna design will be
helpful in reducing local interference.

> This is also born out by the fact that they also sell an Indoor
> version of the antenna which is packaged in a sort of plastic hula
> hoop, rather than in Aluminum tubing.

You and I both do not know what is inside the plastic tubing. It might
be shielded or it may not.

Externally the antenna design is good way to go but it would depend on
how it was executed.

"""

I have had both of these radios and kept the S350 for its portability and gave the GEIII away because for some unknown reason I didn't like it. I also have a GE II which I do like. If I could only have one for AM listening, I would choose a GE II. If my choice was between a GEIII and the drifty 350 I would pick the 350. They both seemed to have the same sensitivity on AM, more or less, but the sound quality is better with the GE. The GE is rather a pain to cart around, being big and heavy, and I find the 350 quite convenient in that respect. The battery drain on the GE is very low but it plugs in to the AC. Actually, I took no pleasure in the GEIII but I have found the 350 to be trouble-free and handy, but I still use the GEII quite often. If you can find a good GEII on ebay or some such, that is the one I would pick. Actually, I hated the GEIII : it had a sort of clockwork orange quality about it that drove me nuts.

I was driving on one of Northern Ontario's lonely roads yesterday at 5:30 am. No traffic and all there was to do was plod along and watch for moose. Moose are road-colored, weigh a ton, and like to stand invisibly in the middle of the road. It is not good to hit a moose: they demolish cars, derail trains, and last winter, knocked a Greyhound bus into the ditch. Being bored, I switched on my AM radio. The radio stations at that time of night are mostly from the US as many Canadian stations have migrated to FM. From 530 to 1700, every channel is filled with something at night, but the clear channel stations are the only ones useful; I tuned in 760 WJR but got only noise. I tuned in WBBM 780 same thing. Then I went to 770 WABC-clear as a bell. The noise didn't sound like the usual power-line rasp but it was rather like gently falling rain.

I knew it couldn't be IBOC interference because promoters on this very website have assured us that the sidebands were so weak that they wouldn't bother disant listeners. Well, I have news. They were lying through their teeth. WCCO 830 Minneapolis took out 820 and 840, 700 WLW Cincinatti took out 690 Montreal and 710, 1180 WHAM took out 1170 and 1190, and 1110 took out 1100 and 1120. These were identified before morning fade-out. The most irritating point is that the stations that were obliterated were clear channel stations that one can listen to in the boonies. Most of the stations were about 600 miles away. If IBOC grows, they will all be taking out each other and leaving drivers to sort through 1400 to find a station. However, they are profit maximizers and hix in the stix don't count in their metro-zone demographics. Will this be the death of am radio?

It's unfortunate he doesn't have the distinguished military record
that your god Bill O'Reilly has. I heard Bill was busy working
undercover saving the East Coast from a Vietcong attack while
appearing to be shit faced in nearly every bar in and around Marist
College. Bill called; he needs his balls massaged by you because no
else can do it as well as you.

First of all, he was accused of sexual harassment. Anyone who has worked for a large organization knows just how easy it is to run afoul of a weirdo and be accused of same. A friend of mine was once accused of sexual harassment by "ogling" some gal, because she thought he had stared at her too often. He was moved to a new group, and the complaint went on his personnel record, all without any witnesses or any due process.

He finally had to get a lawyer to file a formal complaint against his boss with the EEOC before higher management finally put an end to the whole thing and had his personnel records cleared. The woman involved eventually filed similar complaints against other males in the organization, and was finally recognized as a troublemaker. Eventually, she was forced out of the company, but not before my friend had to spend two years of grief dealing with what amounted to a nut case.

Bottom line: I always assume that someone accused of harassment could very well be a victim instead. The assistant director in the O'Reilly case came across as very possibly one of those feminuts who use sexual harassment policies as either a weapon or as a means of extortion. Her lawyer at the time was a very shady character.

I know of no "molestation" or "stalking" accusuations at all against O'Reilly. Those seem to be a words you intentionally used in an attempt to smear the man.

And you should like O'Reilly. He gave Dan Rather a pass, and he just defended John Kerry's anti-soldier remarks. O'Reilly is getting to be more and more left wing with each passing month. Soon, he'll be ready to work for CBS.

dxAce wrote:
> I wasn't aware that anyone was running IBOC overnight.

I was going to say "well, he was listening at 5:30am - and if he was west of Thunder Bay then he'd have been on Central Time". The numbers still don't work out for most stations:

Station October "FCC sunrise"
WABC 0500 CST
WCCO 0630 CST
WLW 0645 CST
WHAM 0530 CST
KFAB 0630 CST

(that WLW figure doesn't make sense, I think I made a typo somewhere. Probably 0545 or 0600.)

So it would have been "daytime" at WABC & WHAM but not at any of the other stations. I am making the rash assumption the unnamed station on 1110 was KFAB -- maybe it was WBT? (which probably would have indeed been in "daytime")

We do occasionally observe major stations running IBOC at night. It must be some kind of FCC-sanctioned test as it happens far too often to be explained as technical errors at some of the country's best-engineered stations. Usually that doesn't happen at this many stations at the same time though.

WABC's HD *can't* interfere with reception of WJR and WBBM in Canada,
because you can't get WJR or WBBM (or for that matter, WABC) in Canada.

Well, at least that's the official line. US stations aren't protected
from interference in Canada, and vice-versa.

'Course, if you were driving on the US side of the border - say, between
International Falls and Pembina - you'd have experienced the same thing...

Are there any local AM stations left in Northern Ontario? (<grin>, kinda)

I was up in Sudbury last fall & 790 was the only local AM left, I did
see (and hear) a French LPRT somewhere between there & Sault Ste. Marie
-- Iron Bridge, I think. IIRC there aren't any AMs in Thunder Bay
anymore, and the ones in Kenora & Fort Frances have both moved to FM.

47. Passports review of Redsun RP2100

Newsgroup: rec.radio.shortwave
Date: 2006-11-01 14:52:32 UTC
From: John Plimmer <plimmer@nospamtelkomsa.net>
Message-ID: <eiaccpqto1@ctb-nnrp2.saix.net>
Source record: 96287

My Passport 2007 arrived in twelve days, dropped from the Boeing from 30,000 feet as it's severely mangled condition attested to.
They have a comprehensive three page review of my Redsun RP2100, most of which I agree with.

Here are some of the things they say with my comments:
"AM MW signals from powerful stations ghosting into the SW band"
I haven't experienced that as the MW stations around here are not too strong.

"Weak images from powerful SW stations reappear 910 Khz further down the band"
I have not experienced this and the nightime signals on the six meg band are pretty fearsome around here. Even when the radio is connected to the main antenna and the signals are really strong I have not experienced this.

"Slightly annoying chuffing when using the tuning knob"
It really is very slight - not an issue to me after my lousy Sangean 818.

"Tuning knob wobbles and volume control has minor play"
Mine are as firm as a maidens breast and finely engineered.
No play or wobbles in mine at all.

eBay seller "tqchina" packed well and it arrived quickly.
My experience with this seller as well = excellent.

"Crave better front end selectivity and dynamic range & overloading disrupts reception"
The nightime six and seven meg signals from the local SW transmitters are really powerful, but even when I connect the radio to my very powerful DX 1 Pro antenna I got no overloading or dynamic range problems at all.

"FM reception is a delight"
Yes, a strong point of this radio, especially if you are trying to get a far distant FM station that is out of range to ordinary portables - it's reception on FM is really quite awesome.

They don't mention the excellent AM BCB band reception which I find the best of any portable radio I have ever owned, including my GE SRIII. Regularly picks up clearly DX from MW stations 4/5000 miles away = quite amazing in a portable.

They conclude:
"Yet for supremely pleasant listening to major world band stations it's right up there among the very best."
They rate it two and three quarter stars.

I can only think that they tested a much earlier model than mine, and that the manufacturer has improved on the factors complained about by Passport in later production models.

I remain supremely happy with my Redsun RP2100 and like them, also find the lack of keypad entry a major flaw which may account for it's relatively low rating, plus of course the other problems they experienced, which I have not.

Passport is a good read and well worth the twenty bucks.

I was in the Eastern Time zone. It might have been a test as I have never noticed this interference before. I thought it might have some connection to the switch from Daylight saving time. All the am stations you hear in Sault Ste Marie are from the US side although they tend to be buried by skip. I remember passing through Iron Bridge one day years ago when it was an am station. They had an antenna strung between two telephone poles and a kid was doing a remote at the Dairy Queen from a volkswagon bus using an old Garrard record changer. A real operation bootstrap. I gave them and A++ for effort. Now that it is a French staion, I noticed that they have a proper tower on a hill above the town but the local charm is gone. One thing is for sure: those so-called weak little IBOC sidebands completely covered the adjacent stations.

Hi Mike,

The RX-340 seller is a very good friend of mine since 1986, and he and I both experimented with AC inverters at various times. The verdict: thumbs-down, due to RFI.

My last attempt was with powering a modded Racal RA6790/GM with a "pure sine" inverter for DC-only DXpedition purposes. The AC supplied by the inverter to the radio was indeed very clean, but the case & cable radiated hash to the MW and HF bands despite all my attempts to shield and choke off the noise.

I used large torroidal cores on the input and output leads of the inverter (a mod I did inside the inverter's case). I placed the pure sine inverter inside a galvanized steel container, moved it 50 feet away from my DXpedition setup, and also grounded the case with two 4-foot ground rods. I was also using a "medical-industrial grade" shielded 3-wire AC cable between the shielded inverter and the receiver.

All of these attempts only served to put a small dent in the noise that was audible on the bands, in the RF-quiet DXpedition setting.

I looked into using linear voltage regulators to supply all the different DC voltages the RA6790/GM requires, and using 24 VDC as the input to the regulators. If I recall correctly, it would have taken 7 or 8 positive and negative supplies of various voltages. I'm convinced this would have worked, but I didn't want to do further mods to the receiver... too risky in my opinion.

This hassle with powering the Racal on DXpeditions led me to switch to a ICOM IC-756Pro, which was my first taste of what a good DSP receiver can do. I fell in love with the spectrum display and filters, and then moved on to a SDR-1000.

My friend selling the RX-340 and I both find the real-time, high resolution displays of the Winradios and the Flex-Radio product to be highly useful for trans-Pacific (TP) medium wave DXing. The resolution of my SDR-1000's display is as fine as 16 Hz, and can "zoom" out as far as 200 kHz, given the correct sound card that supports 192 kHz sampling. My current external sound card is the Presonus Firebox, which supports half that total amount (96 kHz of spectrum display in real time). More useful than the widest view, though, is a display of around 20 kHz total...this is the setting I use most of the time while DXing.

73,

Guy Atkins

The following is a link to a photo of the KTRB new transmitter site:

http://i88.photobucket.com/albums/k172/bpnjensen/KTRBpano.jpg

The view is west toward the east, looking "down the barrel of the gun," so to speak. The main radiating element is the third tower back, with the two foreground towers providing the main directionality. Each of these three has power to it, with about 30 kW going to the main radiator, and smaller amounts to each of the front two. The rear element gets some power, but much less, and contributes more to a reflectivity factor than radiation. The underground radial counterpoises cover about 18 acres, seen as disturbed dirt - but with the reseeding, it wil be a lovely Kelly Green next spring ;-)

From the theory stuff I read off the web, the worst IBOC interference
should be on the station 20 kHz away, as the sideband(s) for the primary
digital channel are on 15-25 kHz (on both sides) from the carrier.
Unless the IBOC station had reduced their analog bandwidth and were
using the second channel (which runs from 5-15 kHz, both sides).

Not sure how rugged you need it to be. Most of the small Degen,
Redson, Eton, etc., radios would easily survive being carried in a
backpack or pannier. If this is a multi-week trip consider that extra
batteries may take up needed space and add weight.

Hey,it's November the one.Last Monday of this week,I took me little doggy to Animal Medical Health place for her annual check up thangy.(she checked out A OK) And I spent over $212.00 dollars for a years supply of Heartguard and Advantage 55 for her.I won't woke her up right now,(because she is sleeping on her couch) but I needs to give her a Heartguard tablet thangy.I always do that on the first day of each month,and about two weeks later,I apply a tube of Advantage 55 to her neck.

Hi
I'm glad your pleased with your radio, I dont really take much notice of
these reviews myself to be honest, what one person likes another may not,
thats how I look at it.
I've got an old Sony 7600D and use it far more often than both my Sony sw77
and NRD-545
regards
Van

The 350 has better selectivity, to take out a strong station nearby in
frequency.

I'd not use either one for DX, rather using a MW loop with another
radio, like the 7600G, to get the daytime distance.

The GE seems more trouble free; the 350 has SW bands and tells you what
frequency you're tuned to. I dunno, either radio leaves you room to
move up. I think the GE is cheaper, which maybe would be a big
factor in satisfaction ; and more volume available. The 350
is marginal outdoors volumewise.

I suggest a MW loop as a first purchase and use it with whatever radio
you have already. (MW loop helps more the less sensitive your radio ;
almost not mattering with either of these radios, though helping a
little. Only matters in the daytime; at night, signals are strong
enough to hear already. Thousands of them.)

And at night, other issues come into play, like being able to receive
weak signals adjacent to stronger signals, and of course, fading.

People have mentioned in the past, I think rightfully, that not
enough people tune up and down the band with any old radio. So
they assume they need something good to receive distant stations,
and they go out and buy something (often the GE Superradio) before
getting a handle on what it's like with whatever radios they have
at home.

Sure... and Bush's grades were better than Kerry's grades at Yale. And, of course, George is President of the United States whilst John 'Fraud' is merely a bloviating Senator.

I'd say you're stupid. And of course you are, being a mere dumbass Liberal.

Gee, or maybe not huh? It wasn't O'Reilly's first time being accused.
And gee, he was his usual blowhard, arrogant, condescending self until
that nasty "feminut" informed habitual confabulator and sexual deviant,
O'Reilly that she had taped his calls. Then magically he settled and
not a word again. Congrats to the lady for taking some of O'Reilly's
whore money from him.

And your comment about the lawyer is a funny one. I'll bet you just
made that up like O'Really makes shit up, didn't you?

Interesting that you mention "Bush Worship".

Cindy Sheehan said "No WMDs", "No 9/11 connection", "No yellowcake" and therefore the Iraq "war" was bogus and a fraud.

For this, she was reviled, called a commie and worse.

Bush said "No WMDs", "No 9/11 connection" and "No yellowcake".

For this, he is worshiped. (Even though he is saying the exact same thing that Sheehan said).

Go figure.

Either the sheeple are asleep or hypnotized. :-(

Dear John,

As I wrote elsewhere, two and three-quarter stars from PASSPORT is
pretty darn good, especially when you consider that this is a new
design from a relatively new manufacturer and its price, including
shipping from China, is only about $100.00 US.

I'm waiting for the prospective new model the RP-3100 which is said to
feature a synchronous detection circuit. That ought to be really
something!!

Best,

Joe

That thing looks pretty bulky

I have to have small, compact and lightweight as I'm
riding this bike abt 1500 miles and every ounce saved
is worth it

This is not the PLUS version. The buyer should inquire as to the serial number/date of manufacture so he/she can ascertain whether certain modifications may be necessary or if they have already been effected.

Caveat emptor.

Best,

Joe

P.S. I NEVER buy "used." There is enough trouble with NEW items.

'''''''''''''''''''''

Of course I know what time zone I'm in. It's the readers who didn't
know what time zone I'm in. Some are sufficiently informed that they
know that Ontario spans both the Eastern and Central time zones. Since
most of the Ontario people live in the Eastern time zone the matter
rarely comes up but they are quite correct to enquire. The further
north you go, the shorter the days and the earlier the sunset.
Incidentally, I was driving around at 6:00 pm tonight and there was
not a trace of IBOC hash. Sunday night was the first and only time I
have ever heard it I noticed a full moon, we just finished
Halloween, and all the witches have been casting spells like crazy.
Could it be that IBOC is a creation of Satan? Just asking.

Me thinks you are the one stuck on stupid. We all heard what he
"said" not what he "meant" to say. It sure is funny he will be in damage
control for at least a week now. Its also funny how a half dozen people
he was going to go stumping for have cancelled his ass. They dont
want to be within 100 miles of this clown. BTW Bush had a higher
GPA in college than your hero Kerry did. So who is he calling stupid?
You libs are always good for a laugh.

What Our Troops think of John 'ff' Kerry and the Democrats :
"Halp Us Jon Carry - We R Stuck (backwards k) Hear N Irak"
http://www.bloggernews.net/11452

"Education, if you make the most of it, you study hard
and do your homework and you make an effort to be
smart you can do well. If you don't, you get stuck in Iraq."
- - - {Anti-US} Senator John F. Kerry (D-MA)
http://www.therealitycheck.org/StaffWriter/tlindaman110106.htm

John 'ff' Kerry is a shinning example of Democrat Elitism
"elitist and patronizing and demeaning to the troops."

John 'ff' Kerry's comments clearly demeaned the Education
and Intelligence of US Troops the men and women serving
this country with Honor in Iraq.

"John 'ff' Kerry needs to learn that the men and women serving in Iraq
aren't there because they didn't study hard or do their homework," "The
all-volunteer force represents the very best of this country. They're
smart, patriotic, exceptionally well-trained, and dedicated to their
mission. They are heroes, and they are the pride of the United States
of America." - - - Vice President Dick Cheney

What Our Troops think of John 'ff' Kerry and the Democrats :
"Halp Us Jon Carry - We R Stuck (backwards k) Hear N Irak"
http://www.bloggernews.net/11452

"Education, if you make the most of it, you study hard
and do your homework and you make an effort to be
smart you can do well. If you don't, you get stuck in Iraq."
- - - {Anti-US} Senator John F. Kerry (D-MA)
http://www.therealitycheck.org/StaffWriter/tlindaman110106.htm

John 'ff' Kerry is a shinning example of Democrat Elitism
"elitist and patronizing and demeaning to the troops."

John 'ff' Kerry's comments clearly demeaned the Education
and Intelligence of US Troops the men and women serving
this country with Honor in Iraq.

"John 'ff' Kerry needs to learn that the men and women serving
in Iraq aren't there because they didn't study hard or do their
homework," "The all-volunteer force represents the very best of
this country. They're smart, patriotic, exceptionally well-trained,
and dedicated to their mission. They are heroes, and they are
the pride of the United States of America."
- - - Vice President Dick Cheney

kerry the anti-american hero of the democrats ~ RHF

Who gives a fuck what the troops think? They're obviously not hired
to think but a faux genius like you hasn't figured that out yet.
They're hired to fight and die. And given the lowered education
standards for recruits since Iraq, Kerry was right on the money. There

aren't many Harvard or Yale candidates getting their asses blown off in sub-standard Humvees fighting for Halliburton and Exxon now are there? To paraphrase: "Patriotism is the last vestige of crooked chickenhawk pussies" like yourself.

Selectivity is a very big issue. Most any radio will do well at night
on MW but sometimes turning the radio to null out a stronger station
over a weak one just isn't enough to pull out the small one.

The digital frequency readout of the Grundig is a big plus. I have
some great little MW radios but its a pain not knowing the actual
frequency its on.

Very interesting looking radio - I wonder, what's up with the switches on the front panel ? I am a bit leary of these types of radios, after my experience with the Grundig S350 - the S350 and SRIII are touted as being high-performance, but my RS model 12-898 (discontinued) is about the size of a Sony 7600GR and gets just as good reception as my now returned S350. Obviously, the RS 12-150 has about an 8-inch ferrite-bar, as the S350, but at this point, it doesn't really seem to matter that much. I looked up my zip-code, but there are no 12-150s available anywhere in stores - too bad, I'de like to check one out. Good catch, I hadn't heard of this radio. Anyway, if AM nighttime IBOC gets approved, we can throw our DXing radios in the trash. The 12-150 doesn't have a user manual online, yet - too bad.

Stay focused and try to respond to the comments about Harvard, Yale,
sub-standard Humvees, Exxon and Halliburton...

We'd like to hear your answer---except there isn't one , as the above
statement is sadly on the mark.

I read somewhere that larger ferrite-bar antannas help with
sensitivity, but smaller-ferrite bars are better at selectivity
(nulling out)...

I've never heard of it either, thanks for the tip. I'll pick one up
this weekend as my local RS lists it as in stock. Good thing they have
the 30 day return policy just in case its not what its billed to be.
If it doesn't tune in 1 kHz increments its not even leaving the store!
Any idea of who actually makes it? It doesn't look anything like the
current RF-2200-wannabe Chinese radios on the market.

Awww, now the little retard boy thinks I'm Mr. Foley.

Your confusion might end if you'd take your meds, boy.

That is exactly what happened to me - after I got my S350, I tried my
little RS PLL radio and my PLL car radio and was able to get exactly
the same stations - I guess, I fell for the S350's pretty face and all
the hype. I'de love to be able to check out the new RS 12-150, but it
is not available in stores in Maryland, yet. But, if AM nighttime IBOC
gets approved, all these are moot points !

Ten bucks it's from China ! I did luck out with my RS 12-898, being
Chinese-made, but it was "custom made" for RS, and is pretty decent
quality. Are all RS radios "custom made" ? :-)

152. Why Do Cons Hang On Misinterpretation Of Kerry Statement?

Newsgroup: rec.radio.shortwave
Date: 2006-11-02 13:39:37 UTC
From: smacktalk@netscape.net
Message-ID: <rrsjk2dgnbtko6nbveacdhg00bu8k30mfv@4ax.com>
Source record: 96391

Because the reality is as ugly as they are...

"Indictments, investigations and allegations of wrongdoing have helped put at least 15 Republican House seats in jeopardy, enough to swing control to the Democrats on Tuesday even before the larger issues of war, economic unease and President Bush are invoked.

With just five days left before Election Day, allegations are springing up like brushfires. Four GOP House seats have been tarred by lobbyist Jack Abramoff's influence-peddling scandal. Five have been adversely affected by then-Rep. Mark Foley's unseemly contacts with teenage male House pages. The remaining half a dozen or so could turn on controversies including offshore tax dodging, sexual misconduct and shady land deals.

Not since the House bank check-kiting scandal of the early 1990s have so many seats been affected by scandals, and not since the Abscam bribery cases of the 1970s have the charges been so serious. But this year's combination of breadth and severity may be unprecedented, suggested Julian E. Zelizer, a congressional historian at Boston University.

At least nine GOP seats have been affected by scandals and are highly vulnerable to Democratic takeover next week. Foley's abrupt resignation has jeopardized a Florida House district that had been on no one's radar screen. Under indictment and amid a swirl of ethics investigations, former House majority leader Tom DeLay (Tex.) resigned from Congress earlier this year, forcing Republicans to mount a long-shot write-in campaign for their chosen candidate. Rep. Robert W. Ney's guilty plea last month on corruption charges still hangs over the Ohio campaign of his would-be Republican successor, Joy Padgett, especially because Ney still has not resigned from Congress.

The GOP has all but abandoned longtime Rep. Curt Weldon (Pa.), as federal investigators examine charges that he steered lobbying contracts to his daughter. Weldon went on television yesterday with an ad featuring actors pleading, "Would you give a friend the benefit of the doubt? . . . Today, Curt Weldon needs our support."

Republican campaign strategists fear they have also lost the seat of Rep. Don Sherwood (Pa.), who has been dogged by the settlement of a lawsuit filed by a mistress who charged that Sherwood had throttled her.

Congress watchers once saw the swing seat of Rep. Rick Renzi (R-Ariz.) as a missed opportunity for Democrats. But now, as the U.S. attorney's

office in Phoenix examines his role in a land deal for a business partner and political benefactor, Renzi's race with political neophyte Ellen Simon (D) has tightened.

Farther west, Rep. Jon Porter (R-Nev.) has had to contend with charges lodged last month by a longtime former aide, Jim Shepard, that the lawmaker made dozens of illegal fundraising calls from his congressional offices. And two reliably Republican districts in California are under assault by Democrats because Reps. Richard W. Pombo and John T. Doolittle have been linked to Abramoff, the lobbyist who pleaded guilty in January to fraud, tax evasion and conspiracy to bribe public officials..."

My Internet connection is too slow to read the .pdf file in the second
link, but... I wonder if the iPod connection is an *audio* jack, for
playing the iPod audio through the radio's speakers?

My DAB radio has a iPod connection, and that's what it is - for playing
the iPod audio through the radio's speakers.

Maybe, but his daddy (Kerrys) didn't get him (Kerry) out of serving in
Vietnam!
All the rest of the "bushies" got deferrments instead, alot of them
were college deferrments - hence Kerry's statement.

Yeah it wiped out WFAN 660 without even trying to null WFAN. Just the opposite,
I was trying to hear WFAN.

I think one of their towers isn't getting the right feed, ruining their eastward
null.

I scanned the band at 6:00 am this morning (thurs 5) and actually, only WABC and its sidebands were there, taking out WJR and WBBM. By 6:30, WABC had faded enough that the adjacent stations were audible, if a bit hissy. There were no other IBOC stations observed this morning.

Here on the East Coast of North America I can still hear Deutsche Welle
quite well even though they supposedly stopped transmissions to North
America.

I suspect, that just like the BBC, I am catching the fringe of a
transmission meant for some third world country.

What I was hearing yesterday afternoon (from a very NOT PRIME listening
location - my office in Washington DC) sounded like a basic German
instructional tape, very slow pronunciation, much repetition, etc. And
it was coming in very clearly.

I personally think that broadcasts intended for the third
world/underdeveloped countries are far more interesting than those
intended for fat american consumption. Although Radio Taiwan and Radio
China International and Radio Australia have some interesting English
formats, almost like "drive time" chatter in the US but about
international issues.

I'd would like to know why IMPEACHED Clintoon didn't fix the education
problem during his disasterous 8 years?
The students who were in school under his watch are now VOLUNTEER ENLISTEES
in the military.

How is Komrade Jiang Zemin?

I know WHA on 970 KHz runs IBOC up to an hour after sunset and starts up
about an hour before sunrise.

I had read somewhere that this is authorized for stations under certain
circumstances which I do not recall.

smacktalk@netscape.net wrote:

>And given the lowered education
> standards for recruits since Iraq, Kerry was right on the money.

You may wish to check your facts about this. Since the draft ended, it's been an all volunteer Military in the US. Court-ordered service ended at the same time because, in the word of one Army General, "we are tired of taking on society's rejects and putting them where their inability to function can cost lives."

The standards for military acceptance have evolved, it's true.

The Marine Corps have raised their standards of acceptance in physical and education criteria 5 times since the end of the draft. And once since 9/11. Primarily because of the number of recruits standing in line to sign up to stand with the finest and turn back an enemy who brought the fight to US soil.

And, since it sounds like your understanding of the Military is a bit on the low side, it's the Marine Corps that takes the beach first. (figuratively and literally.) They catch the first bullets. They take the first casualties. They serve with a pride and an honor that's unsurpassed in the world. But they're the first killed in any conflict. And even with that, the Corps are turning away potential recruits because the numbers volunteering are so many, and the Corps standards are SO high.

Similarly, the US Navy has also raised it's standards.

And even the Army is turning out a dramatically better trained, educated, and committed soldier than before the draft ended.

The proportion of college educated, degreed and post graduate, signing up for the Military in the US is higher than that entering the corporate workforce.

So get your facts straight, and have a little respect for those who lay their lives on the line to insure your right to behave like an ass.

Lower Standards Help Army Recruit More
By Lolita Baldor
The Associated Press

Tuesday 10 October 2006

"The U.S. Army recruited more than 2,600 soldiers under new lower aptitude standards this year, helping the service beat its goal of 80,000 recruits in the throes of an unpopular war and mounting casualties.

The recruiting mark comes a year after the Army missed its recruitment target by the widest margin since 1979, which had triggered a boost in the number of recruiters, increased bonuses, and changes in standards.

The Army recruited 80,635 soldiers, roughly 7,000 more than last year. Of those, about 70,000 were first-time recruits who had never served before.

According to statistics obtained by The Associated Press, 3.8 percent of the first-time recruits scored below certain aptitude levels. In previous years, the Army had allowed only 2 percent of its recruits to have low aptitude scores. That limit was increased last year to 4 percent, the maximum allowed by the Defense Department.

The Army said all the recruits with low scores had received high school diplomas. In a written statement, the Army said good test scores do not necessarily equate to quality soldiers. Test-taking ability, the Army said, does not measure loyalty, duty, honor, integrity or courage.

Daniel Goure, vice president of the Lexington Institute, a private research group, said there is a "fine balance between the need for a certain number of recruits and the standards you set."

"Tests don't tell you the answer to the most critical question for the Army, how will you do in combat?" Goure said. But, he added, accepting too many recruits with low test scores could increase training costs and leave technical jobs unfilled.

"The absolute key for the Army is a high-school diploma," Goure said.

About 17 percent of the first-time recruits, or about 13,600, were accepted under waivers for various medical, moral or criminal problems, including misdemeanor arrests or drunk driving. That is a slight increase from last year, the Army said.

Of those accepted under waivers, more than half were for "moral" reasons, mostly misdemeanor arrests. Thirty-eight percent were for medical reasons and 7 percent were drug and alcohol problems, including those who may have failed a drug test or acknowledged they had used drugs.

I hope this isn't too much for you to read- it's a little different from watching the headline ticker under the talking heads at Fox...

LOWERED STANDARDS

Quality personnel are the key to any modern military, particularly in an all-volunteer force. Yet recruiting shortfalls are forcing the Pentagon to compromise its standards in a number of areas.

Fewer High School Grads in the Army: The Army announced that as of the beginning of fiscal year 2005 (Oct. 1, 2004) at least 90 percent of new recruits should be high school graduates, down from 92 percent the previous year. Up to two percent of recruits can be enlisted even if they scored in the lowest acceptable range on a service aptitude test, compared with 1.5 percent last year. This was the first relaxing of Army recruiting standards since 1998, which were the result of the strong economy. ["Its Recruitment Goals Pressing, The Army Will Ease Some Standards," New York Times October 1, 2004.]

Army Accepting Lower Overall Educational Levels: According to the U.S. Army Recruiting Command, during the first five months of fiscal year 2005 (through February, 2005), about 3.3 percent of the recruits who either signed a recruiting contract or shipped to basic training passed the General Educational Development (GED) high school equivalency test rather than graduate and scored between 31 and 49 points (out of a possible 99) on the service's general aptitude test. Only 1.5 percent of recruits in 2004 fell into that category. Further, over that same five-month period 1.8 percent of recruits were classified as "Category 4"; the lowest classification consisting of those recruits scoring below 30 points on the general aptitude tests. In 2004 only 0.6 percent of the Army's recruits were rated Category 4. ["Army Worries About Quality," Baltimore Sun, March 7, 2005, page 1.]

Army Guard and Reserve Raise Maximum Enlistment Age: In March 2005 the Army raised the maximum age for recruits for the National Guard and the Army Reserve from the current 34 years old to 39. The change was estimated to increase the potential applicant pool by 22.6 million possible enlistees. The change for the Army Guard and Reserve does not affect recruits for the active-duty Army, the Marines, the Navy or the Air Force, all of whom must still be no older than 34. ["Reserve, Guard Raise Recruiting Age," USA Today, March 22, 2005, page 1.]

Army Plans to Raise Maximum Enlistment Age: An Army memo of May 25, 2005 states that the service plans to raise the maximum age for officer recruits from 30 to 42, and to permit recruiters more flexibility to waive their minor criminal or civil offenses. The Army hopes to attract 300 soldiers up to age 42 to attend Officer Candidate School and become second lieutenants, and an additional 300 civilians with college degrees as officer candidates. Currently candidates over the age of 30 are eligible, but the Army requires a waiver. According to the memo, these candidates cannot require a "medical waiver" or have a "permanent profile that would prohibit doing push-ups, sit-ups, running and taking the normal" fitness test. ["Army To Set New

Criteria For Officers," Baltimore Sun, June 9, 2005, page 1.]

Army Recruits Enter Training Sooner: Compared with last year, the Army has cut by 50 percent the average number of days between the times a recruit signs up and enters boot camp. ["Army Having Difficulty Meeting Goals In Recruiting," Washington Post, February 21, 2005, page 1.]

Lower Army Standards for Personal Behavior of Active Troops: More of the new Army recruits are washing out of the service before completing their first enlistment. To keep more soldiers in the service, the Army has told battalion commanders that they can no longer bounce soldiers from the service for poor fitness, pregnancy, alcohol and drug abuse or generally unsatisfactory performance, but instead must refer such cases higher up the chain of command. ["To Fill Ranks, Army Acts To Retain Even Problem Enlistees," Wall Street Journal, June 3, 2005, page B1.]
RECRUITING IRREGULARITIES

Recruiters are clearly feeling the pressure. As a result, incidents of recruiter misconduct are increasing.

In preparing a May 2005 story, the New York Times conducted interviews with more than two-dozen recruiters in 10 states. Several recruiters spoke of concealing health conditions, mental-health histories and police records, the use of falsified documents, and recruiter-assisted cheating on the military's general aptitude test. According to the Army, there were 320 substantiated cases of what it calls recruitment improprieties in 2004, up from 213 in 2002 (the year before the war in Iraq started) and 199 in 1999 (the last year it missed its active-duty recruitment goal). The number of recruiters investigated for improprieties rose to 1,118 in 2004, or nearly one in five of all recruiters, up from 913 in 2002, or one in eight. The Army also admits that it is punishing serious recruiting offenses less often than it has in the past. In 2004, 3 out of 10 recruiters found to have committed serious improprieties were relieved of duty. In 2002 the ratio was 5 out of 10. ["Army Recruiters Say They Feel Pressure To Bend Rules," New York Times, May 3, 2005.]

In May 2005 the Army announced that it's recruiters would "stand down" for one day to review their recruitment policies, discuss ethical recruiting, and renew their oaths of office following allegations of underhanded enlistment practices. It is believed that this is the first time any service has taken a day to review its recruiting standards. Referred to as a "stand-down" because normal operations are suspended, this practice is usually associated with events arising from major safety concerns. ["Army Recruiters To Stand Down," San Diego Union-Tribune, May 19, 2005.]

Army lowers recruit
Recruiters say the lower Department of Defense standards won't hurt the quality of the soldiers.

By Urja Dave email
Collegian Staff Writer

This year more than 2,600 soldiers were recruited into the Army under lower aptitude standards, but State College recruiters said this won't hurt the quality of the armed forces.

"The first factor is the war. They need soldiers to go over there. People are injured, and you need to fill the spots," said Scott Mark, an Army recruiter in State College.

Previously, the Army had only accepted two percent of recruits that had lower aptitude scores, The Associated Press reported.

The new standards, set by the Department of Defense, allow four percent of the recruits to qualify. This year the Associated Press reported 3.8 percent of Army recruits fell into that category.

Mark said as soon as the war is over, the standards will return to normal.

The revised standards come a year after the Army missed its recruitment target by the widest margin since 1979, according to the Associated Press.

Colonel Karen Ward, Penn State ROTC recruiter, said the lower standards are necessary now that fewer people are willing to sacrifice a comfortable way of life.

"It's difficult to recruit quality people," she said. "It takes a special person to leave the comforts of America and suffer for a year."

Sgt. Brian Gibson, an army recruiter in State College, said every month there are about two qualified people who walk into the office, compared to about seven unqualified people.

Ward said she realizes the new standards may decrease the Army's prestige, but the new recruits are just as qualified.

To be eligible for Penn State ROTC, students must be accepted to Penn State and have a minimum SAT score of 920, Ward said.

"Some people freeze up on tests," Gibson said. He added it is unfair to disqualify some people just because they are poor test-takers.

Penn State ROTC has seen a spike in interest, Ward said. She contributed it, in part, to the winning football season. "A lot of people come to Penn State from out of state and pay the tuition. Students then join the ROTC to help pay for college," she said.

Gibson said the new standards also allow for a wider variety of people. The maximum age was 35 but has been changed to 42, allowing for people who are older but equally qualified with more life experience to enter into the army.

These new standards leave many students unfazed. "I'd rather have that than a draft," Jennifer Morelli (junior-finance) said. "People willing to fight do a better job than those not willing to fight."

13,600 recruits -- about 17 percent of first-time recruits -- were accepted under waivers, including criminal problems, misdemeanor arrests or drunk driving. "The Army is a reflection of society," Ward said. She said people don't usually connect the Army with real world problems.

"We're a country, we're a people, we make mistakes," Renee Lauser (sophomore-hotel restaurant and institutional management) said.

The Associated Press contributed to this report.

The smallest and best portable shortwave radios ever made:

The Sony ICF SW-100 is very good but needs the AN-LP1 antenna to perform
well.

Waters & Stanton ships to the US. My orders have been received in as little
as 1 week.
http://www.wsplc.com/acatalog/Sony_Portable_Receivers.html (no active
antenna)
http://www.ogormans.co.uk/shortwav1.htm#SONY ICF-SW100 (no active antenna)
http://www.unitedbuy.com/icfsw100s.html (includes active antenna AN-LP1)

The SW-07 is sweet and includes the automatic AN-LP2 active antenna.

http://parkaveelectronics.com/product.asp?itemid=SONICFSW07
http://www.pmelectronix.com/sony-personal-audio-world-band-receiver-radio-p-708.html
http://www.unitedbuy.com/icfsw07.html

Except for Waters & Stanton I would call these places to confirm item is in
stock.

Both of these radios are very desireable and have a high resale value.

If you check the weight, it is only one pound and the same size as the Grundig S350 - that make me very suspicious of the quality. My little RS radio, about the size of the Sony 7600GR, weighs 15 ounces.

As far as I know, all the IBOC stations have a maximum audio bandwidth of 5
kHz. 8 kHz AM audio bandwidth is supposed to be an option, but that
degrades the IBOC performance.

Kerry certainly showed that he had no guts at all in Vietnam. He faked the purple hearts to get his sorry ass outta there. Then after returning home he became even more traitorous.

J. 'Fraud' should have been tried for treason back in the 70's and then shot. Instead, he winds up alongside ol' Teddy who should have at least been jailed for a significant period of time.

219. Candle shortwave radio

Newsgroup: rec.radio.shortwave
Date: 2006-11-02 22:26:17 UTC
From: Lou <voter@gmailREMOVE.com>
Message-ID: <regtxn3hf4es$.1m1jpi3qrj5cc$.dlg@40tude.net>
Source record: 96309

I have a radio that my mother gave to my father as a gift in the late 1970's (or there abouts, she thinks). It's a Candle made by the Tokyo Transistor Industry Co., LTD., model TK-2653.

I did an online search and found very little information on it and wonder if anyone in this group could provide some additional info, such as history, quality, worth, etc.

I have a Grundig S350 DL I use for general listening, and comparatively speaking, the Candle doesn't do too bad in pulling in stations, although the sound is not as good as the Grundig.

Any info is appreciated.

224. Eton E10 on Sale at the Source

Newsgroup: rec.radio.shortwave
Date: 2006-11-03 00:48:39 UTC
From: "ve3..." <ve3iut@hotmail.com>
Message-ID: <1162514919.441190.243140@e3g2000cwe.googlegroups.com>
Source record: 96314

The E10 is on sale for C$99 at the Source in Canada. It is quite a nice package including a case, charger, 4 NimH rechargeable AA's, a portable wind-up antenna, and earbuds. The radio is quite sensitive, has 555 memories, and sounds good. It is probably reviewed on rec.radio under another brand name but I don't know what it is. It fit ncely under the dash and I listened to WBCQ on the way home while I figured out how to sneak it into the house. One can never have too many radios.

I've never used the GE radio, but I have used the Grundig S350 and now the S350DL. which is marketed by Eton, but still carries the Grundig name.

I found a difference in both sound and AM sensitivity between the two, Both are better in the S350DL, with the sound being the biggest difference.

For the money ($99 at a local Radio Shack) I have no complaints.

The site led me here:
==========
3. 6A2 converter tune down on the floor and their corresponding components in the settlement of about 20mm. likely to be more effective in line with the variable condenser bars, this arrangement is relatively rare, but also very special, from the plane to look back at the beginning, only 6A2 Airenyijie, to end the use of a special machine to do so small peanuts;

http://tinyurl.com/plhlo
==========

It all makes perfect sense now.

mike

You are welcome as all I did was answer (once) for each of your
repeatedly ignorant posts. I figure for you to get a clue would require

it to be hammered into your very impenetrable skull.

Get a clue yet? Doesn't cost any money but it does require an
investment in thinking. Good luck with that.

266. OT - HDTV NTSC/ATSC/QAM

Newsgroup: rec.radio.shortwave
Date: 2006-11-03 04:47:54 UTC
From: Somebody Somewhere <YCTHULHU@aol.com>
Message-ID: <1162529273.943065.5030@b28g2000cwb.googlegroups.com>
Source record: 96456
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

OK, I know this is OT, but I'm going crazy surfing google trying to find a straight answer, and I figure someone in this NG probably knows the answer.

I'm shopping for an LCD TV. It will be fed via my local cable system. I do not currently subscribe to digital cable, just the normal analog stuff on the normal "cable ready" frequencies. I understand that all analog TV will be going away in a few years so obviously I should buy a TV that already has built-in digital signal reception capability via cable input. Some of the TVs on the market have different combinations of NTSC tuners and/or ATSC tuners and/or QAM tuners. I know ATSC is for off-the-antenna analog channels, but which built-in tuner(s) must my TV have to receive the current analog cable channels, the upcoming digital signals from local stations (presumably available via cable), and any digital cable channels?

Help!

The fcc mandate digital mandate only applies to ota (over the air). What your local cable company may or may not do varies.

QAM or cablecard tuners allow you to load a card into your tv and avoid having to use a set-top box for decoding/decrypting digital tv over cable. Its not a bad thing to have, don't have to mess with a second remote or trying to hookup a set-top box.

ATSC tuners, are for digital ota broadcasts like you said. NTSC is the video format we use. I would assume they are just talking about normal analog ota reception.

The majority of cable companies that provide hd channels downsample the hell out of the video and compress them. If you have a good signal, you are really better off watching ota digital. Any lcd tv these days should have support for HD/digital (atsc) for ota reception. The question is, do you want a cablecard slot or stick with the set-top box.

> have to receive the current analog cable channels, the upcoming digital
> signals from local stations (presumably available via cable), and any
> digital cable channels?

ATSC: off-the-antenna *digital* channels. Also works on *some* digital
cable systems.

NTSC: off-the-antenna *analog* channels. Also works with analog cable.
(but not scrambled/premium channels)

QAM: for many (most?) digital cable systems.

If you get a cable box from the cable company then the tuner is
irrelevant - the cable box *is* the tuner. You connect it to the TV
with component or HDMI cables and bypass the TV's tuners altogether.
Likewise for satellite. Though if you have a decent antenna available
you might be able to use off-the-antenna ATSC digital reception for your
locals for better picture quality and to save a few $$$. (you might
also get a few channels that way that aren't on cable)

The end-of-analog mandate applies only to off-the-antenna broadcasts;
cable systems are not required to force all their customers to digital.
I'm sure a NTSC-only TV will work with cable for a long time to come.

ATSC tuners are required by law in newer TVs above a certain screen
size. The mandate is gradually phased in. Eventually *all* new TVs
will be required to have ATSC tuners.

Issaquah bus driver appeals firing for "flipping off" President Bush
By Manuel Valdes
Seattle Times Eastside bureau
An Issaquah school bus driver fired for allegedly "flipping off"
President
Bush during a visit to Seattle in June is appealing her termination.
According to Issaquah School District officials, the incident happened
when
a district school bus stopped for the president's motorcade while
returning
from a field trip in Seattle.
As the president waved to the school children from his limousine, the
bus
driver made an obscene gesture, said Sara Niegowski, a spokeswoman for
the
district.
Bush was in Seattle attending a fundraiser for Congressman Dave
Reichert,
who was riding in the same limousine.
Reichert campaign officials confirm that Bush told Reichert about the
gesture and that the congressman later called Issaquah's superintendent
to
let her know about the incident.
But the district had been informed by other staff the same day it
happened,
Niegowski said. It investigated and found evidence pointing to
"unprofessional conduct" from the driver, she said.
The 43-year-old driver, with the district since 1999, was fired in
September. "This incident has to do with the responsibility of an
employee
who is supervising students to act professionally and serve as a role
model
for appropriate behavior," said Issaquah Superintendent Janet Barry.
"This
was part of a pattern of behavior with this particular bus driver, not
an
isolated incident."
The fired bus driver filed a union grievance last month for wrongful
termination. She has declined to be identified or interviewed.
Chris Dugovich, a spokesman for the Washington State Council of County
and
City Employees, said it wants the district to re-evaluate its decision.
"There's only one individual who saw this and it happens to be the
president

of the United States," Dugovich said. "We're interested in saving her employment."

Barry said she personally knows Reichert from his days serving as King County Sheriff when they discussed school resource officers. Reichert called
as a courtesy, Barry said.
"He never discussed his view or suggested what action he thought would be
appropriate to take," Barry said. "He reported the incident believing - rightly - that I would want to know this occurred, that as a steward of children and public resources, one of my employees had acted inappropriately
in her job capacity."
Barry reiterated that the decision to terminate the employee was not motivated by any political reason.
"If the bus driver had made the gesture to a driver who cut her off on a local road, we would have taken the same action," Barry said.
Times reporter Jonathan Martin contributed to this report.

Sorry for the off topic post, but, with all the fighting on this newsgroup, i felt this was too good to pass up. and me; i'm Apolitical. i try to vote with my heart, and it secret, so I keep my vote to myself. I keep my political ideas to myself, I will not add to the troubles on this group.

Father Michael.

You don't understand. When you are driving around in the boonies in the North there are no local stations to listen to. You can drive miles and never see another car. There are more moose than people. At night all the channels are filled with US stations with strong signals from the clear channels. To add insult to injury, the few Canadian stations that can be heard are covered up by the skip and if IBOC spreads the sidebands will block them as well:. In the daytime, short wave provides good signals. Just imagine tuning from 530khz to 1700 khz and hearing nothing but hiss. This is the price you willingly pay to live far away from cities. I think many city-dwellers would like to live in the country if they could figure out a way to do it.

WHAT: Extension 720 Program with Milt Rosenberg
WHEN: 9 PM CST Monday, November 6th (0300 UTC Tuesday, Nov. 7th)
WHERE: The Voice of Chicago - WGN Radio AM 720 KHz

Listen Live here - http://wgnradio.com/listen/index.htm

THE ROAD TO 9/11
Just about two months ago, America and the world remembered the horrific terrorist attacks of September 11, 2001. As part of our own commemorative program, we spoke briefly with LAWRENCE WRIGHT, a noted journalist and author of the recent book The Looming Tower: Al-Qaeda and the Road to 9/11. Tonight, he returns to the program for the full two hours, to discuss the intelligence missteps that led to 9/11 and how the restructuring of the CIA and FBI since the attacks has helped-or perhaps hindered-the hunt for Osama bin Laden and his cohorts.

THURSDAY, NOVEMBER 9TH
THE GROWING INFLUENCE OF ISLAM IN EUROPE
Many demographic prognosticators foresee that Europe will have a Muslim majority in just a few decades, as Islamic immigration into Europe increases and the European birthrate declines. In addition to this great demographic shift, a rising tide of anti-Semitism has swept across Europe, and this has affected many European countries' foreign policy stances. Tonight, we will be examining the possible consequences of this greater Muslim influence in the western world, as well as the reasons for growing anti-Semitism with DAVID PRYCE-JONES, senior editor at National Review magazine and author of the new book Betrayal: France, the Arabs, and the Jews.
http://www.amazon.com/Betrayal-France-Arabs-David-Pryce-Jones/dp/1594031517/
He will be joined in-studio by ROGER KIMBALL, editor of The New Criterion, who will be on hand to discuss this book and other related matters.

THURSDAY, NOVEMBER 16TH
FAMILY, RELIGION AND SOCIETY
Many observers of American society have observed that the traditional family

is in decline. With divorce and single parenthood on the rise, how can the American family be preserved? We will be examining this question tonight with two representatives of the Howard Center for Family, Religion and Society. ALLAN CARLSON, president of the Howard Center, and GEORGE MARLIN, chairman of its board of directors, will both be on hand to analyze the current state of the American family and offer some strong prescriptions for its ills.

MONDAY, NOVEMBER 20TH
A NIGHT WITH LOU DOBBS
Perhaps best known as the anchor and managing editor of Lou Dobbs Tonight on CNN, LOU DOBBS has also become a passionate advocate for tougher immigration laws, checks on what he terms "the excesses of capitalism" and more legal consideration for the average American. His latest book is War on the Middle Class: How the Government, Big Business, and Special Interest Groups are Waging War on the American Dream and How to Fight Back, and he is our guest tonight on Extension 720 as we discuss immigration, globalization, taxation and many more topics with one of America's most respected journalists.

TUESDAY, NOVEMBER 21ST
EDUCATION IN AMERICA
Noted public intellectual Allan Bloom once defined education as "the movement from darkness to light." But in modern American public schools are students achieving true enlightenment? Or are classes too large and teachers too overworked and students too distracted to achieve important educational goals. Tonight, we will be exploring what's wrong with American public schools and how these problems can be reformed with SOL STERN. One of the leading voices for educational reform, Stern is a senior fellow at the Manhattan Institute and the author of a number of books on education, his most recent being Breaking Free: Public School Lessons and the Imperative of School Choice.

WEDNESDAY, NOVEMBER 22ND
WALKING ACROSS EUROPE
Acclaimed German filmmaker Werner Herzog has said that aspiring filmmakers should skip film school and simply walk across Europe because "the volume and depth and intensity of the world is something only those on foot will ever experience." Chicagoan LEE KAZIMIR took Herzog at his word and decided to walk from Madrid to Kiev. He began his journey in March, completed it in August, and is now back in Chicago. He will be on our program for the first hour tonight to talk about his journey and the documentary he hopes to make from the footage.

COSMOLOGY
How was the universe formed? And what will happen to it as it ages? These are questions that remain unanswerable, even as scientists probe the innermost depths of the universe and come ever closer to explaining much about its origins and organization, including the potential role of an ultimate creator. Tonight, we will gather a panel of cosmological experts to attempt to unravel these mysteries, including OWEN GINGERICH, who is professor emeritus of astronomy and the history of science at Harvard

University, senior astronomer emeritus at the Smithsonian Astrophysical Observatory, and author of the new book God's Universe.

I read the 2002 speech and noted that she had missed her deadlines. I
recall going to Expo 67 and visiting the French pavilion. I was shocked
when I saw the clarity of French television compared to our crappy
picture. I think they used about 800+ lines. We have had 60 years of
crappy tv picture and now the programming is getting pathetic. If they
don't improve the content, nobody will but the thing. We still watch
Magnum PI reruns and admire the writing, acting, and production values.
But with their drive to profit maximization, corporations don't want to
pay for quality or serve people outside the urban demographic zone.

Go to a Walgreen's store in your area and see what they have in the way
of a small AM/FM/Shortwave radio.I am guessing you want something
inexpensive and if it gets dropped or wet,you won't be out much
money.Happy Biycling.

I am still doteing on buying meself (and Blueberry doggy,sometimes she watches tv for a few minutes) a Lyngsat satellite dish. www.lyngsat.com No monthly fees with Lyngsat.Lots of American and furrin tv stations and radio stations too.

Yeah,living wayyyyy out in the sticks beats living in the cities all hollow.
Somebody ought to invent and put on the market a device which instantly translates them furrin movies furrin languages on tv into the English language.Just think what a boon to tv movie viewers that would be.No more looking/reading them subtitles to know what them furriners are saying.

Dude, let me try to explain something to you.
I sent George W. Bush $500 in 2000 - and (of course) voted for him.
I sent GWB $25 in 2004 - ditto.
Chuck Harder says (paraphrased), "George W. Bush loves illegal
immigrants and hates the middle class."
Ergo, by Chuck's logic, I supported and voted for - twice - someone who
is trying to destroy me and my way of life.
Well ... that fits very neatly into your caricature of me - that I'm a
crazed Jew who's apparently still trying to avenge for the Holocaust
(oh, sorry, that didn't happen) - and that I should go away.
Oh, I forgot ... Michael Savage is Jewish, too. And I am very well
aware of what you've been saying about him.
You are an ANTI-SEMITIC BASTARD, cuhulin.
How do you like that?

Now if we could just get them to feel that way about the terrorists we
might have something working for us instead of against us.

As to the comment further above about radio, radio is about
communication and getting information to form your own opinion not
about accepting other's thoughts. There are plenty of stupid people in
the world like John Kerry for example and I do not feel the need to
agree with them. After all what is the value of the perverted point of
view? It is up to me to figure out what the truth is and what is BS.

They're ALL putting on a show. It's schtik!! It's supposed to grab
you and keep you listening - hopefully through the commercials.

How can people not realize this?

And at least Savage - when he launches into a diatribe and then
abrubptly switching to some ego-masturbation with his "I'm a pariah"
lines - is more transparent than a plate-glass window.

So does the Super-radio 3. When fixing some old radios, I've had to do similar kludges to tighten the knobs on slippery shafts - sometimes the knob's bushing gets worn.

Works quite well, actually.

Doing just fine. Work's been going well lately, and we're getting some of the credit card debt paid down.. will be nice to lose all of that one day. :)

Hope all is going well for you as well.

Interesting blog :0) Some souls, or group of souls, really need to
get a decent, humane, hobby. Anyone without fog in front of their
eyes nor cotton wool where their brain cells should be knows that
the Iraq adventure was one great unholy mistake that will rebound on
America and her friends for years, maybe decades, to come. It is
very unlikely that the US and the UK will have any friends left in
the middle east except for Israel and that may turn out to be a
friend too many.

I am not anti American (my wife is American and I really like
America) nor am I anti British. But as I attempt to be honest about
my actions I expect my country's government and those of it's allies
to be honest about theirs. Call me idealistic if you want but until
they at least attempt to be honest you won't find me singing their
praises. What really scares me is the blind allegiance that I see
expressed here and in other forums. What is that about?

Charlie.

bob,

I am afraid that it doesn't work like that, we bring who we are to
what we do and human beings are consistent. You can bet that those
that are bigots here are bigots in all areas of their lives. Like I
said, we humans are consistent.

How many republicans does it take to changer a light bulb?
"I'm not touching that commie, bustard, leftie, liberal, homo,
Edison screw."

and so it goes :)

Watch where you're pointing that thing John.

Canadian mental hospitals really need to try harder to keep the patients
off the computers.

I think I'm hearing Omega One on 13.556 today! Yaaaaaaaaa!!

Haven't heard an I.D. yet, but it's got to be Omega One, the music is
shitty.

Yes, you are indeed a perfect example of an unemployed government handout
leech who contributes ZeRo to society.
You're a menace to society and should have lived under Hitler's Nazi
Germany.

Source record: 96525

Yes, I am prepared to accept that, and the input transistors of my Grundig seem to have been blown since I took delivery of it: But this Degen company, - which has a reputation for continuously improving their models, - has just brought out this completely new and attractive-looking KA11 or DE11 model with a VERY interesting feature which lets it seek and automatically store virtually all locally available stations simply by pressing a button. So you can automatically adjust for whatever is going on in the tropopause every time you turn on the unit!

No one seems to know yet if it incorporates the circuitry of the already extant models or if they have ventured into the cheapie no-frills piece of junk end of the market and stuck a few bells and whistles on it (like Phillips).

I would just go out and buy one as it is relatively inexpensive but there are some snobbish reports of it not being dual conversion (meaning it clearly isn't just the old trusted circuitry updated), and some reports of that meaning nothing IN PRACTICE so I am wary.

Easy way to end this conversation???

Why look at the Trailer Trash Lyndie England of West Virginia!

God damn were talking the dregs of society here people!

But TYPICAL of most ARMY and NAVY/MARINE Recruits

Being a 22 year ARMY vet (And a stupid ex coal miner from Ky) I can vouch for the poor ignorant souls that couldnt get jobs otherwise....mostly black and hispanic poor and uneducated.

John Kerry said it.....for the most part its true....Mostly its people that couldnt get anything else.

95% of the troops arriving at their permanent duty assignments are already sick of the military and wanna go home.

It isn't fear. An expectation that people should treat us the way we treat them is probably what does it. A small amount of respect for your fellow man gives very good results.

It is indeed a very good thing that most people are civilized enough not to go around calling their neighbours or fellow human beings "tards".

< Snip >

You really think playing nice-nice with the terrorists and the people
that support them will make friends?

It was no mistake but a tough decision that had to be made and this
country will stand by that decision because that is the kind of people
we are. The squabbling you read of in the news is just the politics of a
few stupid people that have managed to gain some notoriety.

The right thing to do is usually the hard thing to do and Americans know
how to hang tough. Solders and this nation will pay a high price but we
will all be better off in the end for it.

These days the Democrats are always wrong. Makes knowing what to do a
piece of cake as you just have to do the opposite of what the Demo's
want and there you have it.

What kinds of friends do you want? The kind that stand by you or stab
you in the back when they have a chance.

Nobody has ever called me a tard. That I can remember? I have been called a lot of things though. I do have a fondness for people inspite of ourselves. Never really ever hated anyone except for ..... No I shouldn't say it.

I don't think they do, but if they did, it would be because he's not
Presiduhnt Bush {Con}.

Besides, he's nowhere near as frightening as Hilary. She may well turn
out more of a warmonger than the cretin Prince.

those weren't urban legends. The last one to surrender was in 1974

==========
Hiroo Onoda holds the honor of the last Japanese soldier to surrender,
finally packing it in in 1974. Attempts were made to persuade Hiroo to
surrender, including appeals from relatives. It took his former
commanding officer to convince Hiroo the war was over. He had been
holding out Lubang Island in the Phillipines.

406. Radio St. Helena Day - Nov. 4

Newsgroup: rec.radio.shortwave
Date: 2006-11-04 08:04:10 UTC
From: dxAce <dxAce@milestones.com>
Message-ID: <454C497A.69B7EE66@milestones.com>
Source record: 96546

That's right! Today is Radio St. Helena Day.

Radio St. Helena will transmit on 11092.5 KHz in Upper Side Band mode
on Saturday, 04. November 2006 at:

1800 - 1930 UTC to New Zealand (via short path)
2000 - 2130 UTC to JAPAN (via short path)
2200 - 2330 UTC to Europe
2330 (Sat.) - 0100 (Sunday) UTC to North America

NEW address of QSL-MANAGER Radio St. Helena:

Radio St. Helena
P.O.Box 24
Jamestown
St. Helena Island
STHL 1ZZ
South Atlantic Ocean

Send your reception reports with 3 IRC's or 3 dollars.

News on http://www.news.co.sh/ and http://www.sthelena.se/radioproject/

Charlie,

You are right - this guy is pretty much a plonker. It'll be fun to watch
his sanity slide down especially by the end of next Tuesday. After that,
I can toss him into the can.

At least the 'home front' doesn't suck like Canuckystan.

Run along now little boy, and take your CanaDuh Health prescribed medication.

And Johnny, maybe mommy will get you a radio for Christmas, then you can play with the big boys.

Radio St. Helena 11092.5 USB heard here at 1800 sign on. Very, very weak.
Surprised to hear them as they are beaming due south to New Zealand.

Currently using the Drake R8 and 200' W-E wire.

Well it's a total daylight path to you right now and if they are using a beam Yagi beamed to New Zealand that won't favour you. Will keep listening and hope things improve for you later when they beam to N. America.

I phoned in at 1820 and they put me on the air - first report they had and sent greetings and congratulations to them.
Nice signal, about "S5" with the preamps off - well modulated but a bit muffled.

I have "a" question regarding "Canada". I went to McDonalds last night and when I bought a meal, they had something referring to a "survey" listed - they wanted folks to participate in and have chances to win prizes. In that text, they made mention of "Canadians" being welcome also - except for the Providence of Quebec - I believe. BUT - they had also stated someting to the effect that the "Canadians" had to submit to a "special skills question". What the hell is up with that? Is McDs claiming Canadians are stupid? I'm curious as to WHAT type of "special skills question" AND WHY? That text made NO mention of Americans having to be subjected to the same "skills". Why didn't they include say China, Japan, Russia, etc.... where other McDs may be? Why not the Americans? WHY single out the Canadians?

That has to be one of the "dumbest" things I've ever heard of - and for a "major" corporation to be doing so - is downright weird as hell. It wouldn't surprise me if the Canadians started to "Boycott" McDs. I sure wouldn't blame them!

McDs, not only have I been growing tired of your food and last night may have been my last visit, now you're going to chase people away with your "Bias". THAT was PLAIN IGNORANT.

How did nigga's picking cotton make America the richest country on
earth?
>If that's actually true, we gotta get'em back in the fields pick'en cotton
>again. They can show the Mexicans the best way do it.

SC

OK, here's your answer

King Cotton: The Fiber of Slavery
By Jean M. West

"It was work hard, git beatins and half fed ... . The times I hated
most was pickin' cotton when the frost was on the bolls. My hands git
sore and crack open and bleed."--Mary Reynolds, Slave Narrative from
the Federal Writers' Project, 1936-1938

One of the first images of slavery that leaps into everyone's mind is
the scene of slaves stooped over, picking cotton, and hauling huge
cotton-stuffed bags behind them. Unlike many first reactions, this one
is correct. At the height of the plantation system in 1850, when
cotton had become the dominant cash crop of the South, 1.8 million of
the 2.5 million slaves in the United States (nearly 75 percent) were
involved in the production of cotton. Yet, cotton was a relative
latecomer in the story of slavery in America. Between the arrival of
the first slaves in Jamestown in August 1619 and the ratification of
the Thirteenth Amendment prohibiting slavery (December 6, 1865),
cotton only becomes a significant factor after the invention of the
cotton gin in 1793. Nonetheless, during that 72-year period, an
estimated one million individuals were enslaved in the service of
"King Cotton," either by transatlantic or by domestic slave traders.
How did tiny little fibers ensnare Africans and their descendents and
bind them to slavery? And, what part did that play in helping cotton
to become, as the Cotton Incorporated slogan says, "the fabric of our
lives," found in our blue-jeans and bandages, tee-shirts and
bed-sheets?

You'll probably do all right at 2330 or earlier. Plenty of recognizable tunes and station ID's at least in the 1800-1930 broadcast, and I expect they'll do the same later on.

Seems to sign off with anthem, "My Saint Helena Island", and announcements by a man and woman.

Just playing what seems to be filler music after 1930, getting ready for the 2000 broadcast to Japan, with an occasional ID tossed in.

You "could" be right, but it still seems weird, in that you're not "technically" gambling. Just "replying" to a "survey" and are made eligible to win prizes by doing so. I guess it is a matter of how thin you want to split the hair.

Got 'em here in Brooklyn as well. Just played a short piece of "The
Locomotion". I'm also using the old ANC-4 to cut through some noise.

Steve

20:42 in Seattle. There's a sideband voice signal there, but it's
down in the mud. Strong FAX signal around 11090 kHz. ;-(

>2200 - 2330 UTC to Europe

22:14, a bit stronger

>2330 (Sat.) - 0100 (Sunday) UTC to North America

0:00 still there, weak with deep rapid fading

I'm hoping that's a sign that they will come in like gangbusters for the
North American transmission. I've heard nothing yet and the transmission
to Japan would have been one of my better chances.

How so? The path doesn't even come close to North America. The long path comes back to St. Helena through South America.

That occurs often. It may have something to do with Quebec regulations
on the issue f draws. At the very least, participants cannot be
employees of the company or their family members.

BUT - they had also stated someting to the
> effect that the "Canadians" had to submit to a "special skills question".

It's not the fault of McDonalds but it is a Canadian statute. Any
Canadian entering a draw is usually required to answer a time-limited
skill-resting question usually a simple mathematical question.

Dear Friend,

It has been my dream to start a mailing list where the prophetic predictions of James Lloyd, Randy Maugans, and Sue Patterson can be examined in an unfettered environment without all the personal attacks and name calling.

My dream is a reality now because I have started a new Yahoo email group entitled "Christian Media Talk"

To join the group send an email to the address below:

Christianmediatalk-subscribe@yahoogroups.com

Sincerely,

John Ashcraft

At 17:07EST/13:07UTC I am receiving them but they are so weak I can
only get about every third word. I hope reception improves.

Using a R2000, R8B, AOR7030+ and for grins a DX398, all with a WinRadio
dual transformer 9:1
and 50' of wire tacked between to tree stubs. Antenna is running south
to north and it is about
15' off the ground.

We are having the large Chinese elms in our yard removed so all my real
antennas are
down for the duration.

Located in central Kentucky, about halfway between the city and the KY
river.

Terry

Clear but I guess weak in Ohio; using a battery of filters, a couple notches and an Amcom inc Clear Speech, cleans it up a lot.

As to content, these guys struck me as morons in 1999 and they still impress me as morons.

It is, however, a rare one, sort of.

what major change?
you mean that the dems are liekly to win control of the of the house
and maybe the senate

here your being canadian (or most any non amercian coutry) has an
effct Dem congress means nothing the president does not loss his
office like your PM wouldand the Dem can't do that much about Iraq
even if they want realy want to

Here in SF Bay Area, CA, weak but barely readable at 22:30 onward on
11092.50 kHz USB. Basically doesn't move the needle, but the frequency
is quiet, and modulation is pretty good. Would be fairly easy to read
if the local noise levels around here weren't so high.

Was listening last night at around 1000UTC (plus or minus), and looking around for activity on 80m. Didn't find any hams, but I did find the Voice of Korea on 3560KHz.. they were just signing off their English service and giving frequencies for the next one, and then commenced to broadcast in French. I'm presuming that they are not shooting for France on that frequency... perhaps Vietnam or one of the old French colonies in Asia or Africa? I didn't know that they even used the tropical bands that far north..

--
Say no to institutionalized interference.
Just say NO to HD/IBOC!

Yepp, that's what I"m doing! Very exciting! Wish the voice were not
quite so muffled/hollow sounding, bvut maybe 23:30 will help that too.

For what it's worth, I associate Candle radios with the late 50s and early 60s, but I'm no expert.

The few Candle radios I'm aware of are shirt pocket AM only transistor radios.

I have a copy of Shortwave Receivers Past and Present and there's no mention
of any Candle radios.

Indeed, thats wath the techi explained. Signal is much much better here
now in Scotland then when they targeted to europe.
(another song of Peter Gabriel?)

I'll buy your reasoning as to the Canadians having to do that "skill test",
but I still think it is STUPID! Oh well.
As to the food, I'm less tolerant of it as of late, thus fewer trips.

I don't doubt it, but I don't try to daytime DX near IBOC stations. Mark's information is consistant with my observations from the early days of IBOC, when IBOC was commonly used at night and there was a hole between the AM channel and each of the IBOC sidebands in which a first adjacent might punch through the interference.

In southeast Texas, I heard them better at 2002-2208 than the North American beam at 2330.

A lower frequency might have been better for an all-dark path at the bottom of the sunspot cycle.

I'm hearing them about the same. Must be the side-lobes of the antenna and that
they are beaming about 345 degrees now.

You did better than I did here in San Jose, California. Tried off and on from 1800 to 2130, and listened continuously from 2200 to 0100. Might have heard some hints of voices or music under the noise, or it could have been my imagination. Using a Drake R8 with a 10m longwire running N-S. Got RSH on two out of five previous attempts.

Ugly as sin and like sin it is very addictive.

The nested menus are a PITA!

But the performance is fantastic.

Very good internal noise floor, very good audio, great filters.
The sync detector is funky, tends to unlock during slow deep
fades.

I am watching it for a friend who will be back in the USA sometime
after Christmas. As ugly and ungainly as it is I would sell my left
nu^H er something for one.

It is much better then the R2000. Slightly better then the R8B.
Under PC control the AOR is almost user friendly.

I just wish I had a real antenna up and that I wasn't operating from
the
kitchen table. Should have my radio room reassembled by next weekend.

548. Good speaker for radio

Newsgroup: rec.radio.shortwave
Date: 2006-11-05 02:01:31 UTC
From: r2000swler@hotmail.com
Message-ID: <1162692091.778015.5390@f16g2000cwb.googlegroups.com>
Source record: 96687

I stopped by the local GoodWill (thrift) store last night and picked up a pair
of JBL "ProPerformers" I think the model is J225.

These likely were part of a dolby 5.1 system. No bass below ~100Hz, and the highs stop between 7 and 8K.

I have been using a pair of Minimus 7s with a switch to kill the tweeter.
I don't really need ~10KHz response for radio reception.

The JBLs required about 20% more power for the same perceived SPL.

During todays RSH reception I ABed between a JBL and a Minimus with the tweeter turned off and a H pad added to keep the levels the same. The JBLs
are better for very weak signals. For arm chair copy the Minus 7s are better.
I can't do any real tests as my radio room is a mess.

For the $4 I paid these are a steal. For PC audio editing, especially music
the JBLs don't cut it. So I guess I will end up with 2 sets of speakers in
my radio room. My audio chain is going to be as complicated as my antenna
chain.

Early this morning I had to run over to my parents and I used one JBL with my IC28A and it would make a good speaker for mobile use.

I like good speakers and like them even more when they are cheap!

It had to be the noise at your QTH - although the RSH signal was weak,
it finally came through clear and readable after about 23:00. The
switch to NA was a bit wobbly at 23:30 - some cut outs reportedly due
to physical interference from an adjacent comm tower - but finally I
was able to nab better than 95% copy once they went to N. America.
This on a R75 with two antennas, both effective - a 15m random wire N-S
and a DX Ultra, separately and phased together. It really helped to
have all three preamps on to simply get the volume up, but it would
have been possible without them. Listened all the way through 01:10,
when their "sign-off music" finally quit :-)

And by the way, a BIG thanks to John Plimmer, Terry and DXAce who
brought this to my (our) attention - it really boosted the spirits on a
somewhat mediocre day :-)

You white guys are really something. :-)

So much for those worthless crime stats saying that black people commit more crime than whites. :-) I always knew it was a lie, but now Chris Hanson and dateline have made it visually obvious that whites are the greatest sexual perverts for sure.

I'm watching Dateline now where they are having another sting. for the fourth or fifth time they are trapping men trying to have sex with 13 or 14 year old girls.

Out of the nearly 100 people who have been caught so far, only about half a dozen have been black men. 90% of the rest have been white males! Even a cancer doctor from the Frisco area was caught last week.

Now I understand why white women find black men so desirable. If this show were my only source of knowledge about white males, I would have to conclude that they are only interested in underage girls.

This is really pitiful!

However! If any of you have any connections to DATELINE, tell them to stop being so biased.

It's time they need to flip the script and see how many women will talk to, meet, and have sex with underage boys.

I can't believe they haven't done that yet. They are really being unfair to men.

If I were a white man, I would file a class action suit against Dateline immediately.

I want 20% of the proceeds for making this suggestion that no one has thought about apparently.

Get crackin fellows! Sue Dateline!

the sixties (because I was too young), I have the feeling the label
did run into the seventies.

That said, my impression is that it isn't much more than a label,
that the radios were pretty generic and low end.

Given that, I wouldn't be surprised to find one of those portable
am/fm/sw and "public service" band radios with a Candle label on it.

Michael

the candle radio line were fairly cheap radios of program listening quality. they were primarily intended for reception of the big powerhouse stations and were not of dx quality. they were sturdy and functional. as you have stated it probably holds its own with the s350, a modern radio with a similar intended usage. both are analog radios with the coarse tuning and wide filters. those old 60's and 70's radios do have a certain nostalgia and charm and sometimes its amazing what they will sell for on ebay! do an ebay search and you might find one similar to yours. it would be great on the nightstand and it WAS your pops radio.............. seems very valuable to me!

Whether it's a Candle name on it or whatever,some of those old radios are worth a lot of money.If you still have the box the radio came in,hang on to the box too.

I saw this today at a local RS. It's quite a big radio, with handles.
It has two filters on AM (wide/narrow), and connections for an external
AM antenna, and FM antennas (both 75 and 300 ohms). The user manual is
nothing more than a large sheet of paper in English and Spanish, with
almost nothing useful on it by way of real specs (sensitivity,
selectivity, ...) ...

I am looking (along with lots of other people) for service info for the Bearcat DX-1000 receiver. its a a poor performer but I would like to see if it can be improved.
lots of people have looked for this info for at least 10 years and I am not aware of any service manual bureau that has it and Uniden/Bearcat has not had this info for many years.
if anyone has any new actual leads on this please post this info for all the DX-1000 seekers.

if you don't know of any factual leads, don't bother with suggestions. I think every major manual supplier has been contacted by one person or another.

So what. 10 years ago radios were from either Taiwan or Hong Kong,
which are for all intents the same as China.

[snip]

For what it's worth, I associate Candle radios with the late 50s and early
60s, but I'm no expert.

The few Candle radios I'm aware of are shirt pocket AM only transistor
radios.

Frank Dresser

I sold some Candle stereos... I still use one of them
today... and in
general they were a good brand name, although my $700.00 Candle micro-
wave oven went kaput after 4 years.

It was fun, but after over 7 hours of listening I find that today I'm suffering from RSH burnout!

I had the radio on 11092.5 here from 1700 and during that hour I could have sworn that they were testing the transmitter and indeed they confirmed that they were later on.

Not much of a signal here at 1800 sign on and audio a bit muddy but I soon discovered that switching to a narrower filter cleared that up nicely.

All in all an interesting bit of fun, though I would have liked to have seen just how much of a difference the directional antenna would have made here had they been able to rotate it this way without a problem.

Past transmissions as I recall used a fixed antenna aimed at Ascension Island which put it on a heading to North America all the time.

It seems as though they'll be back next year, or sooner? It would be nice I suppose if they just kept the equipment running and relayed their regular MW service.

So what ? Look what happened to the quality of Eton/Grundig, once they
started to be made in China. The 12-150, must be a re-packaged S350,
with it's light-weight design and large size. Speaking from experience,

these high-performance AM/FM radios are all fluff !

the original 9913 has a 9.5ga solid copper center conductor, the center
conductor has a spiral wrapped standoff insulator, a thin solid dielectric
layer then foil and braid shield. the od is .405" so it can't be easily
distinguished from regular rg8 without looking inside. though if it is the
original good stuff i would expect it to be well marked on the outside since
not just everyone made it. the problem is that there have been many
variations over the years on 9913, including stranded center conductors and
some variations in dielectrics.

Well, Tel, you've done it again...you just -insist- on responding to those off-topic posts, don't you?

Telamon wrote:

> It was no mistake but a tough decision that had to be made

No mistake??? 15 of the 19 9/11 bombers from Saudi Arabia, ZERO from Iraq and we attack IRAQ???

The Administration ADMITS:

- NO WMDs in Iraq

- NO 9/11 connection to Iraq

So based on essentially *nothing*, we invade a sovereign nation, kill 30,000 innocent civilians (as admitted to by the Administration), 3000 American kids killed and 19,000 maimed??? All for nothing!

And that's NOT a mistake???

Unfortunately, we are now stuck... I'm sure you heard of the book and movie "The Perfect Storm".

Sadly, Georgie has painted us into "The Perfect Corner"---big trouble if we stay and big trouble if we leave. We are truly in a no-win situation, no matter which way we turn.

Heck of a job, Georgie! (Too bad you weren't paying attention when your old man said "No exit strategy").

...and Heck of a job, H-Y-P-O-C-R-I-T-E...er, Telamon. Keep up those off-topic responses that you think only you are allowed to make.

Bijeljina I believe has at least 4 500 kW units.

Perhaps they will finally QSL one of my reports. While I do have a QSL from Radio Yugoslavia via their Stubline (Serbia-Montenegro) transmitter site I do not have one from Bijeljina (Bosnia-Hercegovina).

It was fun. Their signal to NA didn't sound too much better here than
their signal to Japan. When the signal was at its best, I was easily
able to ID the music they were playing and to partially copy speech,
but it certainly never became 'easy copy'--not for me, at least. I was
listening with the R8B using the 4 khz filter. I will listen for them
again next year.

I watched the S-meter on my radio climb during the music break at 2329
as they were swinging the antenna around. They were pumping out S9+
signal here for a few seconds until the 'technical difficulties'
began.

The re-aiming of the antenna seems to have really favored the northern
US/Canada, because once they came back the signal here in the lower
Midwest was significantly weaker than what I'd been listening to
during the European slot...even though 345 degrees should have been
more on-target. I guess I was picking up a side lobe that disappeared
with the re-aim.

Hopefully they can get it sorted out for next year.

If your seriously considering the SW-100E (E=European version), also consider the Sony AN-LP1 antenna. This antenna was included with the now discontinued SW-100S (S=System -N.A. version).

Without the AN-LP1/2 antenna, reception off the whip of either radio will be compromised but still very usable.

The SW-07 (includes AN-LP2 antenna) and the SW-100 are both digital tuning and both have a synch detector.

I personally like the ergonomics of the SW-100 but the SW07 automatically tunes the AN-LP2 (included). The AN-LP1 has a dial for band switching.

The SW-100's case is more rugged than the SW-07. But with either radio, or any radio for that matter, I would treat them with care.

Performance of these two radios with the AN-LP1/2 antenna are virtually identical. The performance edge is given to the SW-100 when comparing both radios off the whip. The SW-07 has more memory and also has a station memory ROM chip that can be updated annually. The SW-100 has 100 memories.

Yahoo groups has a group for each of these radios with lots of good info.

I thought I heard them say that microwave tower was just several meters
away from their antenna - does that sound right? Seems like they could
have hardly avoided the problem...

> I watched the S-meter on my radio climb during the music break at 2329
> as they were swinging the antenna around. They were pumping out S9+

Yes, it was frightening for a few moments - it almost seemed as though
the NA segment was about to collapse - but good luck prevailed! My
un-preamped signal never exceeded S-1, but with relatively quiet
background and no interference, it was never hard to "hear." Copy was
variable. Overall, a very good frequency for this location.

Interestingly, the best reception I had of the entire transmission (in
San Lorenzo, CA, USA)was the segment that followed the end of the
official broadcast at 01:00 - when they were playing "Knights in White
Satin" the S-meter gave its strongest reading and the signal was
clearest. Not a surprise, really, as that was the time when the path
was mostly darkness

If they have to avoid that microwave antenna tower to their northwest,
they may have to reposition either it or their own antenna.

Diebold is working on shellac prevention even as we speak. The secret is to allow their guys to win by only the slimmest of margins, That prevents suspicion. Conversely, I can hardly wait for a few of the polls to show Republicans winning by 120 percent. As always, there WILL be explanations as to why that was the will of the people. Computer glitches may yet save the US Constitution.

This is great news, and nice to see an English broadcast too (Albanian is not my strongest dialect ;-) - having said that, it is clearly aimed toward the regional audience (based on times and languages), and it will be tough getting these guys on West Coast NAm in broad daylight all the way, even with 500 kW pumping out. I won't even be home most of the time... :-(

www.walgreens.com (Electronics,Radios) If you are going to be
tuning a radio while riding a bicycle,unless you rig a good neckstrap to
the radio,chances are you will drop the radio on the road and it's a
goner.I don't know about the Walgreen's stores in your area,but the
Walgreen's stores in my area almost always has some electronic thingys
on sale and if they have any AM/FM/Shortwave radios on sale,you can buy
one for about one third to about one half price off of the regular store
price.

For Sale clean Kenwood R-5000 receiver in excellent condition. The unit has all the filter, The VHF board and the voice module. I have a copy of the manual and service manual. It comes with the AC power cord. The only flaw is a slight wear spot on the upper faceplate where the original owner rested his finger while he tuned. I can send pictures to interested parties. Asking $550 Shipped and insured in continental US.
Thanks
Jack

i use a rat shack dx399(sangean 606) in a dumptruck. its very durable! it even fell out and got run over in the mud once! it looks a little rough but still works perfectly. i also use a grundig mini 300 while working construction. it hangs off the back of my baseball cap in its little protective cover with the antenna sticking up above my head. that would work perfectly while riding a bike. battery usage is great! i get almost 2 weeks on two aa cells. (watch out that you dont poke any eyes out with the antenna sticking up!)

The SW radio will only be listened to at night while in
the tent.

No listening will be done while riding the bike.

At night in a tent? In that case if you want to spend a little more money,I suggest a Sony 7600GR Radio and a very good waterproof cover to keep it dry.

In central Pennsylvania with an indoor wire antenna, I heard nothing during the European segment and nothing intelligible during the North American segment. I had a high noise floor; I don't know whether it was local or atmospheric because I haven't been doing much listening lately.

During the last broadcast, I had a much stronger signal with a similar setup, intelligible and at times loud for at least half the broadcast.

How large are the JBLs? When you say that they're better for very weak signals, can you be more specific as to exactly how they're better (lower noise levels from static, better frequency range for voice,...)? I just sent for a pair of Minimus 7s so I haven't heard them yet; they have a good rep on this NG for being good SW speakers.

What about this receiver makes it a poor performer, and what would you
like to try and change on it? Just curious, as it has been dogged for
many years as a bad radio but I've never really heard exactly why. Is
there anything at all that's good about it, besides the fact that it
looks nice?

Turns out my local store didnn't have one, so I couldn't check it out this weekend. It tunes MW in 10 kHz steps, and with a button instead of a knob? Maybe its good that they didn't have one since I would have been very disappointed by that. Please post a review when you get one that works and compare it to other MW "DX" portables, if you could.

Quite true but that should be used more as a guideline as some people I
know north-east of Edmonton did hear the RSH broadcast directed to
Japan. I did say better but not my best chance. In theory, the broadcast
to North America should have been my best shot but it wasn't; my best
reception was with the transmission directed towards Europe.

How did it sound compared to the Grundig S350? What size speaker did it
have?

I just purchased the Radio Shack model that Rich included the link for,
but unfortunately, this is the first radio that I've bought to try and
pull in distant AM stations.

Are there any kind of performance tests that I can do to check the
quality of this radio? Like I said, I haven't used any of the other
popular models in order to make a comparison.

In the full _daytime_, look for a station on every frequency. (no problem at night, there are thousands.) Daytime absorption is what limits what you can hear, and the better the radio, the more it can pull up out of the noise it generates itself (ie. the less noise it generates itself).

Alternatively, and actually more interesting : get a MW loop (select-a-tenna or terk loop, or radio shack loop if you can find one) and see if the radio improves in the daytime.

Most will improve a lot ; a good radio improves only a tiny bit.

You need the loop anyway, so it's not wasted by any means.

The 12-150 has more bass than the S350 but less treble. I don't know what size speaker it had.

Sound quality is very subjective. I recommend that you take your favorite radio to a Radio Shack and try them together to see which you like better. Or better yet, take them both to the place (home, work, etc) where you would be using it most.

The tuning knob is the large black knob with the red mark at the 12:00 position. The knob doesn't turn all the way around, though. It just moves from 12:00 to 10:00 to go down and 12:00 to 2:00 to go up.
Here's a link to a picture of the radio:

AIR FORCE recruiters stopped by last week to talk to students. They will not take anyone with a GED. They only accept high school dipolmas. However, they did say something about if you went on to a community college after obtaining a GED and earned so many hours of college credit - then you could apply to the AIR FORCE. As for the rest of the branches, I can't say for sure, but the various recruiters that have visited - have almost always had various and sundry ways of getting around felonies, misdemeanors and lack of high school dipolma. There is one branch, can't remember which one - that will take you on a conditional, and then help you to get your GED if you are not a high school graduate.

Dipolmas say nothing of one's ability to serve our country. Whether or not a branch of armed service has stringent guidelines of high school degress for acceptance, says little about how the branch performs defending our country. We have the best military in the world. And the most committed individuals serving out country. It's not a job I would want, and I'm grateful for their sacrifice. High School Dipolma, GED or whatever.!!!!!

630. Good deal on 9:1 tranformer

Newsgroup: rec.radio.shortwave
Date: 2006-11-06 02:02:17 UTC
From: bill <gfreport@hotmail.com>
Message-ID: <1162778537.922371.294580@i42g2000cwa.googlegroups.com>
Source record: 96870

I have nothing to do with Grove and my unit did not come from them. It was given to me by a WinRadio owner who does not do any HF listening. Grove and WinRadio direct are the only places I found them listed for sale in the USA.

The WiNRADiO WR-LWA-0130 Long Wire Antenna Adapter has two 9:1 transformers made from,
I am guessing here, different ferrites to give good coverage from 100KHz to 30MHz. It passes RF
all the way up to FM BCB but a 100' antenna is not the best choice up there.

It is a sturdy little 35mm film canister sized unit made from aluminium and it has ears with 2 mounting holes. A stainless steel wingnut bolt are the input and a BNC female the output. I had a chance to compare it to a home made 9:1 and a RF Systems "Magnetic Long Wire Balun".

The WR-LWA-0130 gave much better LF performance then the RF systems unit. I could receive
about 3 times as many NDB and DGPS beacons. From 540 through 20MHz the RF systems
was about the same. Above 20MHz and especially in the US CB band the WinRadio trounced
the RF systems unit.

The WR-LWA-0130 also beat the home made transformer below 500KHz and above about 25MHz.
The bigest advantage, other then performance, is the robust and sturdy case. The home made
unit is about 4 years old and is really showing it's age and it needs a new case.

For those braver then me, the rf systems magnetic long wire is a two part case with a good
gasket and it can be opened and serviced or a diagram drawn if one is skilled enough to
do some minor disassembly.

At $39.00, from Grove's web page, it looks to be a pretty good deal for those like me with more thumbs then skill. The RF Systems is listed at $59.95 from Universal Radio. Having tried both, I would not hestiate to buy the LWA-0130. I may buy one for a antenna running right angles to my present antenna.

I used a DX398 and a stock R2000 for these tests.

William Fieldstone

Thanks for the information about this device. Never tried the MLB, but
I do like RF Systems' T2FD. I woulddn't hesitate to give any of their
products a try (though I will admit it'd cost a lot to try).

The Par Electronics EF-SWL also uses a 9:1 transformer with a 45 foot
wire antenna. Very good performance up to the 16 meter band, but I
rarely tune above that so I can't speak of higher frequency reception.
I'm in the process of reconfiguring the set-up, as I've been limited
with how I can hang it and my ground wasn't the best. Should work even
better when I'm done.

Good info! I use a homemade 6:1 Z-xfmr on an off-center, coax fed
Windom 30M long and the response is good down to about 1.8 MHz because
of the roll off for MW. I would like to make one to include LW but 30M
is insufficient and I'm concerned about local MW overloading if it is
in the bandpass.

What Kerry said probably was dumb. But John Kerry isn't running for anything.

However, Bush currently IS President. Maybe you might want HIM to explain a few of HIS past words, like...

- "Mission accomplished"

- "We will be greeted as liberators"

- "I'm a uniter, not a divider"

...rather than whining about non-issue Kerry.

Source record: 96878

The overall build appears solid although I wish it had a handle rather
than the carrying strap. I've carried it from the garage to my shed a
couple times, and I would have appreciated a handle. The metal braces
on the front feel pretty solid, but I wouldn't be surprised if they are
more ornamental than functional -- only time will tell, I guess.

The selector buttons for the AM/FM/WX setting and for the WIDE/NORMAL
setting have a cheap feel to them. The Treble and Bass knobs are
plastic. The other knobs and controls appear reliable, however.

Apart from concerns about the selector buttons, my only other complaint
is that there is no owner's manual or specs. I was curious about the
size and type of AM antenna (and the store employee was clueless), but
there's no specs anywhere on the radio, box or the lone piece of paper
that was in the box. That kind of makes me afraid of the quality.

I haven't experimented with the presets or memory yet.

The sound is nice for the stations that I've pulled in ... about 550
miles away.

I have really limited knowledge about these radios compared to the
other folks that I've seen post messages. So please take any of my
comments with a grain of salt!

Any other info that folks can share would be greatly appreciated!

Thanx.

Jim

Apparently the USA is the only nation on earth that has the balls to
fight these muslim pieces of shit, and that may soon come to an end
since the communists ---- er --- I mean democrats ----- will probably
take over congress.

Europe has totally surrendered to Islam. Just look at the mess you
have in Britain, muslims and other assorted mud people swarming all
over your once great nation. What a pathetic end to what used to be
the most powerful nation on earth barely 100 years ago.

Iraq may very well be the last stand of Western (White) civilization.
Too bad most European Whites today are a bunch of self-indulgent,
whiny, liberal, estrogen-filled cowards --- and would rather commit
racial suicide than fight for their race. And many USA Whites are just
as bad!

Either all White countries stop this cowardly liberal nonsense and
join together to fight Islam, or you can all bend over for Islam.

Victims of attack share their story
Crime: 10 arrested after attack on Halloween; $2,500 reward offered for information about other suspects still at large.

LONG BEACH - Several suspects including at least three men who savagely beat three young women in a horrific hate crime attack Halloween night remained at large Friday.

The three victims - two of whom are 19 and the third 21 - agreed to sit down with a Press-Telegram reporter and discuss the painful attack in the hope that someone who knows the culprits will turn them in to police.

The young women asked to be identified by only their first names of Laura, Michelle and Lauren because they and their families fear for their safety. The assault, they said, was so savage they thank God they are alive.

`A pack of hyenas'

The victims - along with throngs of other people - had gone to the 3800 block of Linden Avenue around 9:30 p.m. for a popular Halloween block party. As they walked up to an elaborate haunted house, they said, a group of about a dozen males began taunting them.

"They asked us, `Are you down with it?,' we had no idea what that meant so we didn't say anything and just walked by them up to the haunted house," said Laura, "They were grabbing their crotches - we didn't know if it was a gang thing or what."

After making their way through a maze at the house, the three girls said they were back in the same spot where they were confronted and next to the same guys, who again taunted them. Still saying nothing, the three victims tried to walk away but were pelted with lemons and small pumpkins that split the seams on their costumes and left lumps and bruises on their bodies.

The taunts and jeers grew more aggressive, the victims recalled, as did the size of the crowd. Now females joined in, and everyone began saying "We hate white people, f--- whites!"

At this point, the girls began to run, but the pack of assailants ran ahead of them and kept them surrounded.

"It was like animals, like a pack of hyenas," Michelle said.

She was trying to call 911 on her cell phone when the taunts began, but kept getting busy signals. She tried three times to call, she said, but never got through to an operator.

The suspects also began to gradually separate the girls, first by grabbing Laura by her long hair and yanking her backward.

She said she tried to fight off a group of girls who surrounded her and were clawing and hitting her, but then a man came up and slammed her in the head with a skateboard, knocking her unconscious.

"One of the witnesses told the police that he saw my legs go straight up in the air and I hit the ground face first," she said, accounting for the bumps and bruises on her forehead and around her nose and eyes.

Her friends watched, horrified as the man raised the skateboard over his head and slammed her again as she lay on the ground. Others in the pack also began to hit and kick her motionless body.

Fearing their friend would be killed, the other two girls rushed to her aid.

Saved by a Samaritan

Lauren was the first at Laura's side, and a group of people immediately jumped on her and began punching her in the face and back of the head simultaneously. Some kicked her in the back of knees, causing her legs to buckle. At one point, when they got her cell phone away from her, Lauren said she knelt down to try and retrieve the phone.

"Once I knelt down, there was too much of a force on top of me to get back up," she said. "They were pounding on my back, on my head. ... They were kicking at the ball that was me."

Lauren suffered 12 fractures in her face, including four to her eye socket, three to her nose and three to her cheek.

Doctors don't yet know if she will regain all of her eyesight. Until the swelling goes down, they won't know if she'll require surgery to repair the many broken bones.

Forced to drop her college photography classes this semester because she cannot see well enough to use the camera, Lauren also can't blow her nose or sleep lying down. The pressure, doctors told her, could cause any of the fractured bones to shift, which could lead to her eye becoming detached from the shattered socket.

Michelle said she saw the group drag Lauren down as she rushed up and knocked the man with the skateboard off Laura. But then he then turned on her, punching her in both sides of her face and in the ribs.

Her face, like Lauren's and Laura's, is bruised and swollen. The lining that surrounds her lungs is also bruised.

As the man beat on Michelle, Laura regained consciousness and tried to pull him off her friend. But others in the pack immediately began to hammer at her again, she said.

She, like Lauren, suffered a concussion as well as multiple contusions. The lumps and marks on the back of her head and her back show where she was stomped, kicked and punched as she lay on the ground.

In all, the attack lasted about 10 minutes, and it ended only when a Good Samaritan driving by the melee stopped and physically blocked the battered girls bodies while yanking the assailants off the victims.

Maybe because he was so tall and strong, the group broke up and scattered to several cars and fled, the victims said.

"If it wasn't for that guy, honestly, I don't think these two would be here today," Michelle said.

Shortly after the attack, police arrested 10 juveniles on a charge of felony hate crimes, including counts for assault with a deadly weapon, battery and robbery.

Some of the 10 youths - nine girls and one boy ranging in age from 12 to 17 - were found wearing the victim's earrings - which were ripped from their flesh - and had Lauren's cell phone.

Others still at large

The victims were able to identify all 10 but said there are several others who participated who remain at large. They estimated that at least 25 people took part in the attack, while witnesses who live on the block told police the crowd looked to have between 30 and 40 people.

"I heard these thumping sounds and all these people yelling "F--- whites, f--- whites!" said one resident who witnessed the attack.

She spoke on condition of anonymity, fearing the assailants might return to her neighborhood and attack her and other witnesses.

"I have such mixed feelings," she added. "I'm so ashamed that I didn't try to run out there and stop them, but it was terrifying."

"I've never seen anything like that in my life," she added. "I can't even describe it. I'm still terrified."

She said she called 911, along with several of her neighbors, and screamed frantically for help as a dispatcher tried to calm her down. North Division officers found the 10 youths not far from the scene of the crime in a grocery store parking lot.

One girl's mother said she doesn't blame witnesses who were too frightened to intervene.

And she and the other mothers said over and over how grateful they are to the man who saved their daughters' lives.

"I can't imagine," Barbara said, her eyes shining with tears. "I can't imagine anyone doing that to another human being, or even an animal."

Now the mothers are working with police and imploring the district attorney's office to prosecute the youths as adults and to seek the harshest sentences possible. They have raised $2,500 for a reward fund so far, and are taking more donations in the hope it will spur someone to turn those responsible in to authorities.

Most of all, the girls and their mothers want the three men - who appeared to be in their early 20s - to be arrested.

A team of detectives have been assigned to the case, and the police response has the victims and their families confident that the men will soon be found.

Anyone with information about the suspects or the incident is urged to call police at the Youth Services Division, at (562) 570-1426, or Violent Crimes Division, at (562) 570-7250.

"Anything anyone can do, please help," said one of the mothers. "These people ... they don't belong in society."

DIVERSITY --- HAD ENOUGH YET?

BLACKS DON'T BELONG IN AN ADVANCED WHITE CIVILIZATION. JUST IMAGINE HOW MUCH FARTHER WE COULD ADVANCE IF WE DIDN'T HAVE TO CONSTANTLY DEAL WITH AND PAY FOR THESE VIOLENT, LOW-IQ BLACK SAVAGES.

Hey m II,go buy me a deep plunge push up Wonder Bra,size C Cup.
www.wonderbra.com
I would buy one at a local Jackson store,but I don't want to look stupid looking/trying one on in the department stores around here.The Goodwill store I get to once in a while never has them.

"as always" WHAT, fatboy?

It's bad enough when literate people have to struggle through your poorly written, foul and mistyped dribble, but it's even WORSE when the words you DO spell correctly don't even make the least little bit of sense in the context of the reply.

Idiot.

Then I guess we can just save this letter and send it to the
Editorial Staff at Monitoring Times, Toiddie.

I bet your "uncle" isn't about to compromise his editorial
reputation on your illegal operations.

N9OGL alledges that Mr Zeller is his (Toiddie's) uncle.

It will be interesting to see, if proven true, if Mr Zeller will
compromise professional ethics and reputation so that Toiddie can play
illegal HF disc jocky...

I bet not.

That's because it ISN'T illegal FOOL! It legal part 95 transmitter
and field strenth meter prove it! When you own GR 2409A meter that
cost $5,000 new then you can talk. But then you dont know shit about
the law so STFU before I file complain against you for harassment.

Part 95?...You call ME a fool...?!?!?

IDIOT!

Or is this yet another Freudian slip? Got one of those "export
CB's" to use as the exciter for your illegal broadcast station,
mudlump?

> When you own GR 2409A meter that cost $5,000 new then you can talk.

I can talk right now.

I have YOUR words telling us how you're using power levels in
quantum leaps above what Part 15 is allowed to run, and into antennas
that will more than effectively radiate those power levels at field
strengths in excess of the aforementioned Part 15.

> But then you dont know ##### about
> the law so STFU before I file complain against you for harassment.

Be my guest, Toiddie. I'll just attach all the copies of your profanities, threats, and your bragging of violation of federal law, especially Part 15.

Have a nice day, mudlump. Sober up before you try to come back in here you little brat. Then you can tell us more about your threats of harrassment allegations and your author uncles.

Steve, K4YZ

I am sure he can.

And I will be glad to attach copies of OTHER N9OGL posts that were
forwarded via thge same pathway that were legitimate.

Toiddie's been TOS'ed from his ISP's before. The best he can hope
for is the use of remailers to keep from getting canned yet again.

> Come to think if it, you've acted upon forgeries before, haven't you?

Just once.

> Maybe we should rename you "Dan Rather."

Unlike Mr Rather, I recognized my own mistake and acknowledged it.

So now...About your fear of being archived...?!?!?

Thanks for your review, but this radio must be a re-packaged S350, or
the old "high-performance" radio RS used to sell. Being only one pound
for such a large radio, and having cheap switches, sounds just like the
S350. I am sure that the metal braces are just ornamental, too. The
S350's "metal" plate on the front, just turns out to plastic, as its
speaker grill. The RS radio looks nice, but don't drop it !

> output of 100 watts.

Been listening on and off since the original posting
above and NEVER heard it once. Just heard some
commercial USB around 13.551 that sounded like
marine traffic from Europe. Apart from that, it's been
dead air static on 13.556 LSB.

Conclusion: Omega One Radio exists in your head.
(The phone calls are comming from INSIDE the house
folks...)

Get help Todd. Or go back to the Legion Hall and drown yer sorrows
in those cheap suds at 10:00 AM like the rest of the barstools do....

677. ISIHAC new season

Newsgroup: rec.radio.shortwave
Date: 2006-11-06 16:13:32 UTC
From: Tester <teest@test.org>
Message-ID: <fenuk25evic7qmu4caj8fbjg1mec90jq5i@entropy.org>
Source record: 96767

Humphrey Lyttletonet alia begin a new season of I'm Sorry I Haven't a Clue on Nov. 13 on BBC Radio 4, according to an announcement on BBC7. They didn't mention a time but the last season's time, according to the ISIHAC website was Monday, 1830 (GMT) repeated Sunday at noon.

Streaming and audio on demand available.

I should guess this may be repeated on WS at some point.

Well - just sent off that reception report, airmail, with 3 IRCs and a donation - we'll see what happens. The RSH website (Radio News, Nov. 3) suggests that the last mail delivery to or from the island before Christmas is on November 8 by ship that also serves Ascencion out of Capetown, so it might even take awhile to get there, let alone process down the road. Patience, patience...

By chance, one of my good friends is on a cruise that takes him to Jamestown right aorund now - so I e-mailed him and suggested he check out the place, stop in and say howdy...

The AN-LP1/2 fold up into the provided flat pouch about 8" square.
Very easy to pack and well worth the money.

FYI: Used SW07 w/box, manual, antenna, $300

Hi Will -

Thanks for the info. If you ever need just a 1:1 isolation unit to
isolate coax shield grounds, I stumbled across what appears to be a
good unit for $24 at LF Engineering yesterday.

http://www.lfengineering.com/products.htm

Scroll down to the N-300 Ground Isolator; Strange (to me) choice of RCA
phono plugs, but appears OK. I'm going to get one and check it out.

Bob

The World Service has dropped "Light Entertainment" programming. As I
understand the logic (from "Write On", the old name of the feedback show,
now "Over to You"), a lot of rebroadcasters only go with the BBC for a
short block of time, and the audience wants something predictable from
day to day. So they don't want to use up these limited time periods
with half hour blocks of less serious/less popular stuff.

The 12-150 is definitely not the same radio as the S350. The only similarity between these two radios is their handles and their size.

There's absolutely nothing else that the two radios have in common.

WHO: Interview with the author LAWRENCE WRIGHT
WHAT: Extension 720 Program with Milt Rosenberg
WHEN: 9 PM CST Monday, November 6th (0300 UTC Tuesday, Nov. 7th)
WHERE: The Voice of Chicago - WGN Radio AM 720 KHz

Listen Live here - http://wgnradio.com/listen/index.htm

THE ROAD TO 9/11
Just about two months ago, America and the world remembered the horrific terrorist attacks of September 11, 2001. As part of our own commemorative program, we spoke briefly with LAWRENCE WRIGHT, a noted journalist and author of the recent book The Looming Tower: Al-Qaeda and the Road to 9/11. Tonight, he returns to the program for the full two hours, to discuss the intelligence missteps that led to 9/11 and how the restructuring of the CIA and FBI since the attacks has helped-or perhaps hindered-the hunt for Osama bin Laden and his cohorts.

The Looming Tower:

THURSDAY, NOVEMBER 9TH
THE GROWING INFLUENCE OF ISLAM IN EUROPE
Many demographic prognosticators foresee that Europe will have a Muslim majority in just a few decades, as Islamic immigration into Europe increases and the European birthrate declines. In addition to this great demographic shift, a rising tide of anti-Semitism has swept across Europe, and this has affected many European countries' foreign policy stances. Tonight, we will be examining the possible consequences of this greater Muslim influence in the western world, as well as the reasons for growing anti-Semitism with DAVID PRYCE-JONES, senior editor at National Review magazine and author of the new book Betrayal: France, the Arabs, and the Jews.
http://www.amazon.com/Betrayal-France-Arabs-David-Pryce-Jones/dp/1594031517/
He will be joined in-studio by ROGER KIMBALL, editor of The New Criterion, who will be on hand to discuss this book and other related matters.

THURSDAY, NOVEMBER 16TH
FAMILY, RELIGION AND SOCIETY
Many observers of American society have observed that the traditional family is in decline. With divorce and single parenthood on the rise, how can the American family be preserved? We will be examining this question tonight with two representatives of the Howard Center for Family, Religion and Society. ALLAN CARLSON, president of the Howard Center, and GEORGE MARLIN, chairman of its board of directors, will both be on hand to analyze the current state of the American family and offer some strong prescriptions for its ills.

MONDAY, NOVEMBER 20TH
A NIGHT WITH LOU DOBBS
Perhaps best known as the anchor and managing editor of Lou Dobbs Tonight on CNN, LOU DOBBS has also become a passionate advocate for tougher immigration laws, checks on what he terms "the excesses of capitalism" and more legal consideration for the average American. His latest book is War on the Middle Class: How the Government, Big Business, and Special Interest Groups are Waging War on the American Dream and How to Fight Back, and he is our guest tonight on Extension 720 as we discuss immigration, globalization, taxation and many more topics with one of America's most respected journalists.

TUESDAY, NOVEMBER 21ST
EDUCATION IN AMERICA
Noted public intellectual Allan Bloom once defined education as "the movement from darkness to light." But in modern American public schools are students achieving true enlightenment? Or are classes too large and teachers too overworked and students too distracted to achieve important educational goals. Tonight, we will be exploring what's wrong with American public schools and how these problems can be reformed with SOL STERN. One of the leading voices for educational reform, Stern is a senior fellow at the Manhattan Institute and the author of a number of books on education, his most recent being Breaking Free: Public School Lessons and the Imperative of School Choice.

WEDNESDAY, NOVEMBER 22ND
WALKING ACROSS EUROPE
Acclaimed German filmmaker Werner Herzog has said that aspiring filmmakers should skip film school and simply walk across Europe because "the volume and depth and intensity of the world is something only those on foot will ever experience." Chicagoan LEE KAZIMIR took Herzog at his word and decided to walk from Madrid to Kiev. He began his journey in March, completed it in August, and is now back in Chicago. He will be on our program for the first hour tonight to talk about his journey and the documentary he hopes to make from the footage.

MONDAY, NOVEMBER 27TH
COSMOLOGY
How was the universe formed? And what will happen to it as it ages? These are questions that remain unanswerable, even as scientists probe the innermost depths of the universe and come ever closer to explaining much about its origins and organization, including the potential role of an ultimate creator. Tonight, we will gather a panel of cosmological experts to attempt to unravel these mysteries, including OWEN GINGERICH, who is professor emeritus of astronomy and the history of science at Harvard University, senior astronomer emeritus at the Smithsonian Astrophysical Observatory, and author of the new book God's Universe.

It's not just the terrorists who are backing the Democrats, the Communists
are as well.
http://www.pww.org/article/articleview/10050/1/345/

Well, it's only fair since the Democrats back the communists.
http://ussneverdock.blogspot.com/2006/11/us-democrat-keith-ellisons-ties-to.html

Over two dozen arrested for anti-Communist text messages

The only similarity, is that the 12-150 is probably a light-weight
piece-of-crap like the S350 !

Dear Dumb fuck,

First off your talking to a fake, Since I just recently got on the web,
Secondly, Zeller isn't my uncle, I do however believe that he was one
of the persons who sent a request for a QSL card back when the station
first started. I really suggest Stebie that you check header before
responding to a fake.

Who's "stave" and what to what do you make reference in
"evedence"...?!?!

> but you sure sound jealous

Jealous of WHAT, fatboy?

Being known as an illegal broadcaster?

Hardly.

As for Toiddie being "heard across eastern North America"...guess
what...?!?! I already have DXCC and WAS with ALL of North, Central AND
South America confirmed.

So why would I be jealous of poor programming played into an SSB
signal, Mork?

Steve, I suggest you read Part 15, Part 15 has nothing to do with power (in Wattage) it has to do with the field strength (maininly the electrical field of the electromaganetic wave) you can put out 100 watts and still have the field strength as prescribed under part 15 (on 13.556 MHz it 15,848 microvolts per meter at a distance of 30 meters (90 Feet) CB radio's which run 4 - 5 watts is 10,000 microvolts per meter at 30 meters.....but you wouldn't know anything about that now would you??

I don't follow that logic. Looking back over the last six years in the
Republican administration I see mostly death, destruction and deficit.
Live, maybe, but live miserably.

I'd vote Republican if it made sense, but it just doesn't right now.

What about Republicans and ham radio?

That's the problem with ham operators, they are use to working with
wattage, under part 15 it's a little different. I know I guy who builts
part 15 device and has done for 15 to 20 years now and he tell you the
same thing I told steve, but again hey stebie is a ham and only mess

with wattage.

This is bad news.

==========
The new transmission season started on October 29, and as anticipated,
actual spectrum occupancy by major broadcasters has declined
substantially, as compared with the A06 season.

http://rvjp.blogspot.com/
==========

What I'd like to see in a portable MW receiver. A good audio section like the one in the GE SR III. Both 9 and 10 KHz digital step tuning with at least 1 KHz fine tuning. Good selectivity allowing for split-frequency DX. Very good sensitivity. Better than average image rejection. Synchronous detection. RF attenuator. Large ferrite bar which can be rotated separate from the main body of the radio. Switch allowing for disconnection of the internal ferrite bar antenna to allow for exclusive use of an external antenna. S-meter. Make it an MW or MW + SW only set and tailor its performance to get the most out of those bands. Oh, include stereo decoder. Is this asking too much?

Ordered from Ebay seller tquchina-couldn't be more pleased! It was shipped within 24 hours from China on 10/27 and I got it today in Pa. 11/6.

Forget the other portables-this thing kicks ass. The only downer I could find was that as you spin the tuning knob, you get a 'plink-plink-plink' sound as the encoder switches frequencies. Some won't like that, but, the audio is so nice-reminds me of a (real) Grundig I had once-that you'll probably wanna listen more than spin. This radio is for the broadcast listener. I bought it with that intention. No SSB in this unit.

Sensitivity on the 2100's whip makes me think my E1 might be broken with its uselessness on its whip. E1 audio response, while still nice, is more flat than the nice, bassy RP2100. In terms of "Hi-Fi," it's the best sounding portable I've had. AND!: the pots are nice and linear-nothing like the POS RF gain and volume controls on the S350.

I won't say much more-the review on radiointel.com pretty much has it right-best to go there and check it out.

Not to mention, that in person it's a really nice looking radio.

Rich

Al-Qaeda Wants Republicans to Win
By Robert Parry
October 31, 2006

George W. Bush's blunt assertion that a Democratic victory in the Nov. 7 elections means "the terrorists win and America loses" misses the point that Osama bin Laden stands to advance his strategic goals much faster with a Republican victory.

Indeed, as U.S. intelligence analysts have come to understand, there is a symbiotic relationship between Bush's blunderbuss "war on terror" and bin Laden's ruthless strategy of terrorist violence - one helping the other.

Last April, a National Intelligence Estimate, representing the consensus view of the U.S. intelligence community, concluded that Bush's Iraq War had become the "cause celebre" that had helped spread Islamic extremism around the globe.

In June, U.S. intelligence also learned from an intercepted al-Qaeda communiqué that bin Laden's terrorist band wants to keep U.S. soldiers bogged down in Iraq as the best way to maintain and expand al-Qaeda's influence.

"Prolonging the war is in our interest," wrote "Atiyah," one of bin Laden's top lieutenants.

Atiyah's letter and other internal al-Qaeda communications reveal that one of the group's biggest worries has been that a prompt U.S. military withdrawal might expose how fragile al-Qaeda's position is in Iraq and cause many young jihadists to lay down their guns and go home. [See below]

But a Republican victory in the Nov. 7 congressional elections almost certainly would end that concern. A GOP-controlled Congress would continue to give Bush a blank check, meaning the Iraq War would be prolonged and, quite possibly, expanded into other Middle East countries.

Bush would be tempted to double up on his Iraq wager by attacking Iran and Syria, two countries that U.S. officials have accused of aiding Iraqi insurgents. A number of U.S. military experts also believe that Bush would order the bombing of Iran if it doesn't agree to curtail its nuclear research.

An expanded war would thrill Bush's neoconservative advisers and other prominent Republicans, such as former House Speaker Newt Gingrich, who have lusted publicly over the idea of fighting "World War III" against radical Muslims around the globe.

But the continued war in Iraq and its regional expansion would serve bin Laden's interests, too, by proving to many of the world's one billion Muslims that the Saudi exile was right in his predictions of an aggressive Western assault on Islam.

As the violence worsens, Middle East moderates would be forced to choose between Washington and the Islamic extremists. Like any violent revolutionary, bin Laden knows that the greater the polarization the faster his extremist ideology can grow.

On the other hand, Bush realizes that his best chance to retain and consolidate his political power in the United States is to exploit the American people's fear and loathing of bin Laden and portraying his rivals as al-Qaeda's fellow-travelers.

So, in an Oct. 30 speech in Statesboro, Georgia, Bush said, "However they put it, the Democrat approach in Iraq comes down to this: The terrorists win and America loses."

Same Coin

The reality, however, is that Bush and bin Laden are the proverbial two sides of the same coin, both benefiting from the other's existence and actions. Indeed, in the six years of the Bush administration, bin Laden could not have found a more perfect foil - or some might say a more useful fool - than George W. Bush.

First, in summer 2001, when al-Qaeda was an obscure band of extremists hiding out in the Afghan mountains, Bush failed to react to U.S. intelligence warnings about al-Qaeda's plans for an impending attack.

After nearly 3,000 people were killed on Sept. 11, 2001,in the worst terrorist attack in history, Bush reacted by ordering U.S. forces to charge into the Middle East on what he called a "crusade" to "rid the world of evil." Bin Laden quickly jumped on the anti-Muslim connotation of the word "crusade."

Though U.S.-led forces ousted bin Laden's Taliban allies in Afghanistan and cornered bin Laden at Tora Bora, Bush failed to close the trap, allowing bin Laden and key followers to escape. Then, before Afghanistan was brought under control, Bush diverted U.S. military forces to Iraq.

There, Bush eliminated secular dictator Saddam Hussein, one of bin Laden's Muslim enemies, and repeated the Afghanistan mistake by celebrating "mission accomplished" without devoting sufficient U.S. forces to stabilize the country.

That blunder allowed al-Qaeda elements led by Jordanian Abu Musab al-Zarqawi to set up shop in the Iraqi heartland. Though the force never totaled more than about five percent of the anti-U.S. fighters in Iraq, it conducted dramatic attacks, especially against Shiite targets, that worsened Iraq's Sunni-Shiite sectarian strife.

Meanwhile, in the United States, bin Laden's murderous 9/11 assaults created a political climate that helped Bush establish one-party Republican dominance. Citing the "war on terror," Bush also asserted "plenary" - or unlimited - presidential powers for the conflict's duration.

In effect, Bush suspended the American concept of "unalienable rights," as promised in the Declaration of Independence and enshrined in the U.S. Constitution and the Bill of Rights. Under Bush's theory of presidential powers, gone are fundamental liberties such as the habeas corpus right to a fair trial, protection from warrantless government searches and prohibition of cruel and unusual punishments.

Then, whenever Bush has found himself in political trouble, he has conjured up the frightening spirit of bin Laden to scare the American people. Other times, bin Laden has stepped forward on his own to lend a hand.

Election Scheme

On Oct. 29, 2004, just four days before the U.S. presidential election, bin Laden took the personal risk of breaking nearly a year of silence to release a videotape denouncing Bush. Right-wing pundits immediately spun the videotape into bin Laden's "endorsement" of Democrat John Kerry. Polls registered an immediate bump of about five points for Bush.

However, inside CIA headquarters, senior intelligence analysts reached the remarkable conclusion that bin Laden's real intent was to help Bush win a second term.

"Bin Laden certainly did a nice favor today for the President," said deputy CIA director John McLaughlin in opening a meeting to review secret "strategic analysis" after the videotape had dominated the day's news, according to Ron Suskind's The One Percent Doctrine, which draws heavily from CIA insiders.

Suskind wrote that CIA analysts had spent years "parsing each expressed word of the al-Qaeda leader and his deputy, Zawahiri. What they'd learned over nearly a decade is that bin Laden speaks only for strategic reasons. ... Today's conclusion: bin Laden's message was clearly designed to assist the President's reelection."

Jami Miscik, CIA deputy associate director for intelligence, expressed the consensus view that bin Laden recognized how Bush's heavy-handed policies - such as the Guantanamo prison camp, the Abu Ghraib abuse scandal and the war in Iraq - were serving al-Qaeda's strategic goals for recruiting a new generation of jihadists.

"Certainly," Miscik said, "he would want Bush to keep doing what he's doing for a few more years."

As their internal assessment sank in, the CIA analysts were troubled by the implications of their own conclusions. "An ocean of hard truths before them - such as what did it say about U.S. policies that bin Laden would want Bush reelected - remained untouched," Suskind wrote.

However, Bush's campaign backers took bin Laden's videotape at face value, calling it proof the terrorist leader feared Bush and favored Kerry.

In a pro-Bush book entitled Strategery: How George W. Bush Is Defeating Terrorists, Outwitting Democrats and Confounding the Mainstream Media, right-wing journalist Bill Sammon devoted several pages to bin Laden's videotape, portraying it as an attempt by the terrorist leader to persuade Americans to vote for Kerry.

"Bin Laden stopped short of overtly endorsing Kerry," Sammon wrote, "but the terrorist offered a polemic against reelecting Bush."

Sammon and other right-wing pundits didn't weigh the obvious possibility that the crafty bin Laden might have understood that his "endorsement" of Kerry would achieve the opposite effect with the American people.

Bush himself recognized this fact. "I thought it was going to help," Bush said in a post-election interview with Sammon about bin Laden's videotape. "I thought it would help remind people that if bin Laden doesn't want Bush to be the President, something must be right with Bush."

In Strategery, Sammon also quotes Republican National Chairman Ken Mehlman as agreeing that bin Laden's videotape helped Bush. "It reminded people of the stakes," Mehlman said. "It reinforced an issue on which Bush had a big lead over Kerry."

But bin Laden, a student of American politics, surely understood that, too.

Bin Laden had played Brer Rabbit to America's Brer Fox as in the old Uncle Remus fable about Brer Rabbit begging not to be thrown into the briar patch when that was exactly where he wanted to go.

Iraq-Terror Ploy

By rhetorically merging the Iraq War and the "war on terror," Bush also has kept many Americans from understanding the true nature of the

Iraq conflict. From 2003 to 2005, Bush presented the worsening violence in Iraq as mostly a case of al-Qaeda's outside terrorists attacking peace-loving Iraqis.

"We're helping the Iraqi people build a lasting democracy that is peaceful and prosperous and an example for the broader Middle East," Bush said in one typical speech on Dec. 14, 2005. "The terrorists understand this, and this is why they have now made Iraq the central front in the war on terror."

But this analysis blurred the varied motivations of the armed groups fighting in Iraq. The main elements of the Iraqi insurgency are Sunnis resisting the U.S. invasion of their country and the marginalization they face in a new Iraq dominated by their Shiite rivals.

Non-Iraqi jihadists, a much smaller group estimated at about 5 percent of the armed fighters, are driven by a religious fervor against what they see as an intrusion by a non-Islamic foreign power into the Muslim world.

As U.S. military officers in the field recognized - and as new intelligence has confirmed - al-Qaeda's position in Iraq was far more fragile than Bush's rhetoric suggested.

Indeed, an intercepted letter, purportedly from bin Laden's deputy Ayman al-Zawahiri and dated July 9, 2005, urged Zarqawi, then al-Qaeda's leader in Iraq, to take steps to prevent mass desertions among young non-Iraqi jihadists, who had come to fight the Americans, if the Americans left.

"The mujahaddin must not have their mission end with the expulsion of the Americans from Iraq, and then lay down their weapons, and silence the fighting zeal," wrote Zawahiri, according to a text released by the U.S. Director of National Intelligence.

To avert mass desertions, Zawahiri suggested that Zarqawi talk up the "idea" of a "caliphate" along the eastern Mediterranean. In other words, al-Qaeda was looking for a hook to keep the jihadists around if the Americans split.

A more recent letter - written on Dec. 11, 2005, by Atiyah - elaborated on al-Qaeda's hopes for "prolonging" the Iraq War.

Atiyah lectured Zarqawi on the necessity of taking the long view and building ties with elements of the Sunni-led Iraqi insurgency that had little in common with al-Qaeda except hatred of the Americans.

"The most important thing is that the jihad continues with steadfastness and firm rooting, and that it grows in terms of supporters, strength, clarity of justification, and visible proof each day," Atiyah wrote. "Indeed, prolonging the war is in our interest." [Emphasis added.]

The "Atiyah letter," which was discovered by U.S. authorities at the time of Zarqawi's death on June 7, 2006, and was translated by the U.S. military's Combating Terrorism Center at West Point, also stressed the vulnerability of al-Qaeda's position in Iraq.

"Know that we, like all mujahaddin, are still weak," Atiyah told Zarqawi. "We have not yet reached a level of stability. We have no alternative but to not squander any element of the foundations of strength or any helper or supporter." [For details, see Consortiumnews.com's "Al-Qaeda's Fragile Foothold."]

What al-Qaeda leaders seemed to fear most was that a U.S. military withdrawal would contribute to a disintegration of their fragile position in Iraq, between the expected desertions of the foreign fighters and the targeting of al-Qaeda's remaining forces by Iraqis determined to rid their country of violent outsiders.

In that sense, the longer the United States stays in Iraq, the deeper al-Qaeda can put down roots and the more it can harden its new recruits through indoctrination and training.

Just as U.S. intelligence agencies concluded that the Bush administration's occupation of Iraq became a "cause celebre" that spread Islamic radicalism around the globe, so too does it appear that an extended U.S. occupation of Iraq would help al-Qaeda achieve its goals there - and elsewhere.

So, contrary to Bush's assertion that a Democratic congressional victory means "the terrorists win and America loses," the opposite might be much closer to the truth - that a continuation of Bush's strategies, left unchecked by Congress, might be the answer to bin Laden's dreams.

I didn't think there were any numbers stations that used phrases like
"this concludes message #69". I am no authority on it but I bet it is the
latter, not the former.

Robert Parry works with Socialist Norman Solomon

Who is Norman Soloman?

READ IT ALL TO UNDERSTAND THE DEPTH AT WHICH THE COMMUNIST PARTY INTERNATIONAL HAS INFECTED THE INTERNET WITH THEIR PROPAGANDA LIES AND AGENDA.

Made eight visits to Moscow in the 1980s
Founder and Executive Director of tax-exempt, media-left-spinning Institute for Public Accuracy (IPA)
Took actor Sean Penn and others to Saddam Hussein's Iraq to provide propaganda against U.S.
Former executive of left "media watchdog" organization Fairness and Accuracy in Reporting (FAIR)
"There are ways that the U.S. government could legitimately reduce the negative coverage it gets on al-Jazeera. For instance, if President Bush wants al-Jazeera to stop airing grisly footage of dead Iraqi civilians, as commander in chief he could order U.S. troops to stop killing them." -- Norman Solomon, 2004

Norman Solomon is founder and Executive Director of the Institute for Public Accuracy (IPA).
[Noam Chomsky was keynote speaker at its 15th Anniversary party.]
http://www.discoverthenetwork.com/groupProfile.asp?grpid=7092
While the "media watchdog" group Fairness and Accuracy in Reporting (FAIR) - of which Solomon was President in the mid-1990s - complains of lack of left views in the news, the Institute for Public Accuracy instead pro-actively provides leftwing "experts" and spin to influence journalists.

Born in 1952, Norman Solomon grew up in the suburbs of Washington, D.C. in Montgomery County, Maryland. In June 1966, when he was 14, Solomon began to be watched by the FBI (as he later wrote of learning through a Freedom of Information request) for his radical activism with the Montgomery County Student Alliance.

In the 1970s Solomon lived in Portland, Oregon, where he became an activist against nuclear power and nuclear weapons. An aspiring writer, he served as

chief researcher for the Committee for Veterans of Hiroshima.

In November 1981 Solomon and journalist Duncan Campbell co-authored a sensationalist article in the British socialist newspaper New Statesman that inaccurately claimed that a U.S. Navy Poseidon missile accident that month at a Scottish naval base nearly caused a mushroom cloud and radioactive disaster in Great Britain.

In 1982 Solomon and fellow left-activist Harvey Wasserman co-authored the book Killing Our Own: The Disaster of America's Experience with Radiation, which gave the most negative view they could devise of the effects of radiation from nuclear tests, weapons manufacture, nuclear waste storage and atomic reactors.

In September 1984 a District Court judge sentenced Solomon to 10 days in jail for being one of 30 protestors who had obstructed railroad tracks in Vancouver, Washington. These protestors blocked a train carrying U.S. Department of Energy cargo from a weapons manufacturing facility in Amarillo, Texas bound for the U.S. Navy Trident submarine base in Bangor, Washington. Solomon at the time was "disarmament director" for the interfaith "peace" organization Fellowship of Reconciliation.

"Peace" was not necessarily the only agenda of left activists during this era. President Jimmy Carter during the late 1970s had desperately weakened America by helping topple the key U.S. ally the Shah of Iran, who was succeeded by medieval Islamist fanatics. This precipitated war between Iran and neighboring Iraq that needlessly claimed half a million lives. The Soviets invaded Iran's neighbor Afghanistan, where other Islamists (including a Saudi former-playboy named Osama bin Laden) developed guerrilla tactics to oppose the invaders.

A frightened world watched as the United States under President Carter appeared to be a weakening, unreliable ally - and the Soviets, following their triumph in Vietnam and invasion of Afghanistan, appeared to be a superpower destined to dominate the future.

But in 1980 the American people ejected Carter and elected as President Ronald Reagan, who reasserted U.S. greatness. One of President Reagan's key decisions was to reassure America's wavering allies by putting U.S. intermediate range nuclear missiles into Western Europe. (Such weapons were the only way nations of the North Atlantic Treaty Organization NATO could offset the numerical superiority of the Soviet Red Army and its puppet allies in Eastern Europe's Warsaw Pact.)

The Soviets launched a massive effort to block President Reagan's missile plan. The U.S.S.R. mobilized and funded huge leftwing protests across Europe and spread scare propaganda to persuade Europeans that American nuclear weapons and their radiation were worse than Soviet hegemony.

Norman Solomon's writings and protests dovetailed perfectly with the Soviet propaganda to stop U.S. missiles and push for nuclear disarmament. (The Soviets made endless treaty offers to immediately dismantle their nuclear weapons if America did likewise - but these Soviet offers always included a

refusal to permit any inspections to verify Soviet disarmament.)

Norman Solomon made eight trips to Moscow during the 1980s. He traveled with press credentials as a reporter working for the Pacific News Service and Pacifica Radio. But in Moscow he behaved in ways far beyond accepted journalistic ethics - acting as an anti-American propagandist and political protestor.

In February 1986, Solomon and U.S. military veteran Anthony Guarisco staged a sit-in at the U.S. Embassy in Moscow, demanding that the U.S. join the Soviet Union in a nuclear test ban. As journalist Mark Hand reported, "Two Marines eventually carried Solomon out of the embassy, while Guarisco walked out on his own."

During their Soviet sojourn Solomon and Guarisco met to lend additional propaganda support to two Soviet government-run front groups pushing the disarmament line, the Soviet Peace Committee and the Soviet Veterans' Committee, as well as with the "independent" Committee to Establish Trust Between the U.S.S.R. and the U.S.A.

In 1988 Solomon moved back to the District of Columbia, where he worked as spokesman for Guarisco's anti-military, anti-nuke group the Alliance of Atomic Veterans.

Was Solomon a mere idealist seeking a nuclear-free world? Or were his Soviet-supporting words and actions instead tactics used to advance a far-left ideology? One clue can be found in a 1992 anti-nuclear, anti-American speech Solomon gave at the University of California Santa Cruz. "I often think of a statement attributed to the Italian anti-fascist Antonio Gramsci," said Solomon, "who spoke about what he called the need for 'pessimism of the mind and optimism of the will.'"

Gramsci, as Solomon clearly knew, was more than an "anti-fascist" of the 1930s. Gramsci was a Marxist and a Stalinist. The words quoted by Solomon - familiar to Marxist acolytes but to few others - were Gramsci's definition of the "revolutionary temperament." By quoting these deceptively-attributed code words, Solomon was winking to comrades in his audience that he was a fellow hard-left revolutionary.

Gramsci's major contribution to Marxist thinking is the idea that radicals should seek "cultural hegemony" by capturing "the institutions that produced society's governing ideas." Solomon learned this lesson well from his Marxist mentor Gramsci, and has devoted himself to radicalizing society by shaping and controlling the media through which people acquire ideas and information.

In August 1988 Solomon was hired to run the new Washington, D.C. office of FAIR, a group founded two years earlier by radical activist Jeff Cohen with the aim of helping America's already-liberal establishment media move even farther left.

In 1990 Solomon and Martin A. Lee co-authored Unreliable Sources: A Guide to Detecting Bias in News Media. In 1992 Solomon published The Power of

Babble: The Politician's Dictionary of Buzzwords and Doubletalk for Every Occasion. In 1994 he wrote False Hope: The Politics of Illusion in the Clinton Era.

From 1992 until 1997 Solomon and Cohen co-wrote a newspaper column, "Media Beat." Soloman has continued the column solo since then. It is presently distributed by Creators Syndicate, whose wide spectrum of columnists includes leftists Molly Ivins, Alexander Cockburn and Robert Scheer. Solomon's column is carried by some establishment newspapers such as the Cleveland Plain Dealer and counter-cultural publications such as San Francisco's Bay Area Guardian and the Noam Chomsky-worshipping radical "Z" outlets Zmag and Znet (which between them have published and archived more than 120 of Solomon's articles and columns).

Solomon and Cohen co-authored three books published by Common Courage Press. One was Adventures in Medialand: Behind the News, Beyond the Pundits (1993). Another was Through the Media Looking Glass: Decoding Bias and Blather in the News (1995). The third was Wizards of Media Oz: Behind the Curtain of Mainstream News (1997).

Solomon and Cohen in 1994 also began a continuing tradition of giving annual FAIR awards called "The P.U.-litzer Prizes" for examples of what they deemed right-wing or capitalist bias in media.

But although he has continued to work closely with Cohen and FAIR, Solomon soon moved from Washington, D.C. to San Francisco. From there he has written articles for many liberal-left publications and for such left outlets as The Progressive, the National Catholic Reporter, and The Nation. Solomon for a time was an "associate" of the liberal Center for Investigative Reporting. He has appeared widely on radio and television, including BBC radio and CBC radio and television.

A harsh critic of Israel as well as of the United States, Solomon has also written for the Saudi-backed Arab News and been a featured guest on anti-American Al-Jazeera satellite television. "There are ways that the U.S. government could legitimately reduce the negative coverage it gets on al-Jazeera," wrote Solomon in 2004. "For instance, if President Bush wants al-Jazeera to stop airing grisly footage of dead Iraqi civilians, as commander in chief he could order U.S. troops to stop killing them."

In 1997 Solomon published The Trouble with Dilbert: How Corporate Culture Gets the Last Laugh, a neo-Marxist interpretation of the popular comic strip. This odd book includes an introduction by leftwing cartoonist Tom Tomorrow.

Norman Solomon's 1999 collection of columns titled The Habits of Highly Deceptive Media: Decoding Spin and Lies in Mainstream News won, aptly enough, the "George Orwell Award for Distinguished Contribution to Honesty and Clarity in Public Language" from the left-liberal National Council of Teachers of English. This book's introduction by leftwing educator Jonathan Kozol characterizes Solomon as in "the tradition of Upton Sinclair, Lincoln Steffens, and I.F. Stone." All three, like Solomon himself, engaged in the

Orwellian doublethink that peace is war and that freedom is to live under an all-powerful socialist government.

In the mid-1990s Solomon and David Barsamian co-founded a weekly syndicated radio news program called Making Contact. Barsamian, whose own longstanding radio show Alternative Radio originates from his home base in Colorado, is closely affiliated with Michael Albert and Albert's radical "Z" publications. Barsamian is author of several books with left political cult leader and Holocaust-denier Noam Chomsky and of others with Marxist historian Howard Zinn. Several of these books are published by Albert's radical publishing house South End Press. One of the most recent of these is Barsamian's Propaganda and the Public Mind: Conversations with Noam Chomsky (2001), which carries a dust jacket quote by Norman Solomon that this book "will inspire readers.."

SSMaking Contact continues today as an "international radio program" produced and syndicated to as many as 165 radio stations by the left National Radio Project in San Francisco. Since the late 1990s Solomon has eased back from being a regular co-host of this show to being its "senior advisor." One of this program's current media "collaboratives" is on the pivotal South American nation Colombia, now fighting a Marxist insurgency backed by Fidel Castro ally Hugo Chavez, dictator of bordering Venezuela. Two of the three left groups in charge of Making Contact reporting about Colombia are FAIR and the Institute for Public Accuracy (IPA).

In 1997, with seed money from $200,000 in grants from the Stern Family Fund and at least $100,000 from Moyers' Schumann Foundation, Solomon spun off his own leftwing organization based in San Francisco called the Institute for Public Accuracy (IPA). IPA has also received significant funding from the Solidago, Arca, Threshold and New World foundations and the Open Society Institute, created and bankrolled by radical international billionaire financier George Soros.

IPA [a tax-exempt 501(c)(3) charitable organization] has an implicit symbiotic relationship with FAIR. When FAIR accuses a media entity of conservative bias, IPA rushes to offer far left "experts" and database information to provide "balance." IPA acts as a pseudo-authoritative source of "objective" information that FAIR and other left-of-center groups can cite to bolster their arguments and credibility.

IPA "'roster of experts' represents extensive knowledge and insights that routinely go untapped in the mass media..[that] does not ordinarily get through the various media filters..," reads IPA's own web site. "Reachable on short notice, these policy analysts include experts from academia, public-interest groups, and grassroots organizations" that "widen the bounds of media discussion."

"IPA places a high priority on continual outreach to a variety of news media, from the Washington press corps to talk show producers in every region of the country.." IPA's web site continues. "Overall, producers and journalists have been very receptive when we contact them."

Those in the media are, of course, bombarded constantly with press releases designed to get free publicity for a product or company. Most are ignored by journalists, who recognize that this information is sent to sell something through the equivalent of free advertising.

But, in effect, the Institute for Public Accuracy is doing the same thing, using spokespeople labeled as "experts" to sell leftwing ideology as its product. IPA nearly admits this, writing that "For the most part, IPA's experts and colleagues with similar perspectives have little access to the mass media." But IPA follows the news cycle, looks for topics about which some of its left-leaning experts can speak, and relies on the laziness, liberalism and, ironically, capitalist competitive pressure of TV, radio and newspaper journalists and editors to wangle IPA "experts" into stories the media is reporting.

IPA, as part of the far left's anti-Iraq War coalition, arranged and funded activist actor Sean Penn's winter 2002-03 trip to Baghdad to provide propaganda supporting Saddam Hussein and attacking Republican President George W. Bush. As the handler who accompanied Penn on this junket, Solomon proclaimed that the actor's "visit could inspire many Americans from various walks of life to explore how they can impede the momentum toward war, whether in Baghdad or at home in the United States."

IPA in 2002 likewise arranged and funded travel for two veteran Democratic lawmakers, both Arab-Americans - West Virginia Congressman Nick Rahall and former South Dakota U.S. Senator James Abourezk - to Saddam Hussein's Iraq.

"IPA's press office," wrote investigative reporter Jean Pearce in March 2003 at frontpagemagazine.com, "has become the central media clearinghouse for the peace movement, building credibility for former socialist and Communist radical organizers now striving to pass themselves off as moderate.."

In 2003 Solomon and Reese Erlich co-authored Target Iraq: What the News Media Didn't Tell You (Context Books), a book that includes an introduction by Marxist historian Howard Zinn and afterword by actor Sean Penn.

In a 2002 column urging Democrats to remain strongly anti-war, Solomon wrote: "Inside the amphitheater in Philadelphia at the 2000 Republican National Convention, I was struck by the blood-curdling joy that delegates expressed when speakers voiced enthusiasm for past and future wars. The Democrats will never be able to equal such mind-numbing fervor for military madness. It's tragic that so many seem to be trying."

In 2004 Norman Solomon joined Noam Chomsky, Howard Zinn, David Barsamian and other former supporters of radical presidential candidate Ralph Nader to urge "progressive" voters to cast their ballots instead for Democratic Party presidential candidate Senator John F. Kerry of Massachusetts. Senator Kerry had voted to authorize the use of military force in Iraq but voted against supplemental spending on body armor and other supplies for American troops sent there.

In June 2005 Norman Solomon's latest book, War Made Easy: How Presidents and Pundits Keep Spinning Us to Death (Wiley & Sons) is scheduled for publication.

This Norman Solomon - a radical critic of capitalism, America and Israel - is not to be confused with renowned scholar of Judaism and author Norman Solomon.

Fortunately mine came in English and ready for 115 VAC-with the reputed
battery life, I just run on batteries. (I try not to leave any of those wall
warts plugged in anyway)

I emailed tquchina and asked about the RP3000 they're supposed to be
releasing. Not 'till mid-2007. :(

Hi Cuhulin & others,

Yes, OT, but important. I voted first thing this morning. I didn't
like a bunch of em on the ticket -mostly dems- so I wrote in my friends
and family. I wonder if their names will show up in the paper. Heheh.
This is going to be exciting to see what happens. The talking heads
are in heaven today.

This is off-topic (OT) - find a political Usenet.

Wow, short-memories.

Remember the 1980s and Reagan administration's fight against the
Sandinista Revolution (1980 - 1990) in Nicaragua ?

Of course, most people remember the Iran-Contra affair with Oliver North.
It involved several members of the Reagan Administration who in 1986 helped
sell arms to Iran, an avowed enemy, (1 of 3 "axis of evil" countries) and
used the proceeds to fund the Contras, an anti-communist guerrilla
organization in Nicaragua.

12 years of Republican administration sure did not solve that problem.
BTW, remember Jose Daniel Ortega ? -- received majority of votes this week

But the problem is that what is the market?

The GE Superradio carries a nice label, which likely sells more radios.
But it really isn't that much more than an average portable AM/FM radio.
It could be argued the bigger speaker (ie better sound for local reception)
is as much a factor as the the heralded ability to receive distant stations.

The things the previous poster wants is quite available in a receiver. A lot
of portable shortwave receivers have most of those features. But, they also
carry a higher price. The cost is a reflection of the better circuitry, but
it also reflects a more limited market.

Just about everyone will spend ten dollars to get a portable AM/FM radio.
Some will pay a bit more to get one with a bigger speaker (and maybe better
DX ability). But the number of people who want an AM/FM radio for DX is
a much smaller number. Development cost has to be spread over that smaller
population. The cost reductions of mass production can't kick in, as it
does at the ten dollar radio level.

Once the features are added, you have an AM/FM radio that costs quite
a bit, but for most people doesn't give them any extra ability (because
they aren't interested digging signals out of the mud). Many of the
people who might be interested would look at the price and say "but at
its core, it's still just an AM/FM radio". They might be more tempted
by the addition of shortwave bands, but that adds more cost, and those

already exist.

That seems pretty late and pretty low in frequency for a North
American pirate. They're usually on much earlier (maybe 2000-0300),
and more in the range of 6850-6950. I'm no authority either, but it
seems like it would be a wasted late-night 'out of band' effort for a
pirate to be doing that.

Source record: 96995

Hi,

since a view days I own an TTrx350D, second hand. I notice an annoying beep / hetrodyne in the background when I'm listening to amplitude modulated stations in ssb mode: AMU-AML and ECSS.
Strange but SAM sounds oké! When I'm listening to hams everything is also ok.

So, there is always a hetrodyne tone when I'm listening that way. Very annoying!!
Is there someone else how recognise this problem and knows how to cure it?

Thank you in advance,
grtz.

Hans

:
: Steve, I suggest you read Part 15, Part 15 has nothing to do with power
: (in Wattage) it has to do with the field strength (maininly the
: electrical field of the electromaganetic wave) you can put out 100
: watts and still have the field strength as prescribed under part 15 (on
: 13.556 MHz it 15,848 microvolts per meter at a distance of 30 meters
: (90 Feet) CB radio's which run 4 - 5 watts is 10,000 microvolts per
: meter at 30 meters.....but you wouldn't know anything about that now

Odd. If you take the formula for an isotropic radiator emitting P
watts and solve it for the electric field, e, you come up with
e = sqr(30*P)/r at a distance of "r" meters (see my earlier posts).

For a power of 5 watts at a distance of 30 meters, that becomes

e = sqr(30*5)/30 = 0.408 volts/meter = 408,000 microvolts/meter.

That number is 400 times larger than the value you quoted. Where in the
heck are you obtaining figures like 10,000 microvolts/meter? Have you
been consulting Woger again?

And then normally, Markie's gibberish is so stupid it's funny, and someone else follows-up and teases him, which causes Markie to fire back with more gibberish and the whole point of my post to save ham radio from becoming like CB is lost under all the turds piled on it.

But that's OK. I'm not whining. I'll just make more threads.

Tnx, 73, and keep on Crappin.

I agree with all you said. I enjoy the hobby of DX listening and most who do will pay a bit extra for a good radio. However, DX enthusiasts tend to be a bit weird, not to mention far and few between. I include myself in that group. I don't have lots to spend on radios. If I did, I would probably own a Drake R8, which I understand, is an awesome radio!

I have a love-hate relationship with my GE SR III. It's such an odd radio. It shines in ways one would not expect for a $50 radio. I was enamored by its audio quality the moment I hear it. It just sounds great! As for its DX ability, it sure is a sensitive set but lacks in the selectivity department particularly on the top end of the dial. But it sounds great! I am amazed at how inaccurate its dial calibration is! But it sounds great! It looks and feels like it may fly apart at any moment. But it sounds great! I truly believe that if better quality control and craftsmanship were put into that set, it would really be an attractive radio. But then the price would have to go up. I have set my GE SR III aside other high-performance portables and it gets pretty much anything all others pick up and with superior sound. My GE SR III benefits quite well from the Select-A-Tenna set alongside especially on the lower end of the band. Could someone explain to me why the SAT when introduced to a radio causes the tone of the signal to change. The treble seems to drop off a bit, but the bass and midrange become stronger and louder resulting in a richer sounding signal. It's almost as if the receiver is somehow more selective and concentrating the signal into a smaller or more narrow area.

Wayne

Air and vacuum have nearly identical permittivity and permeability -
the properties which control the impedance of air and of free space
and which in turn relate electric field strength to the spatial power
density. It sounds to me as though you are simply blowing smoke and
have no real understanding of what you just attempted to write.

Todd is operating illegally. No amount of bloviating can make that
fact go away. Deal with it.

Assuming you are treating the AM signal as an SSB signal (ie using
an SSB filter and the product detector for demodulation), the beat
is hardly unexpected. The AM signal has a carrier, and then you've
got a "locally generated carrier" in the receiver.

The point of tuning the AM signal as SSB is that the narrower filter
knocks out the unwanted sideband, and attenuates the carrier of the incoming
signal enough that it is too weak to cause a noticeable beat against
the receiver's BFO.

But if things aren't tuned properly (be it the BFO in the receiver
isn't adjusted properly, or the main tuning isn't adjusted properly)
then there will be a beat note, and that's expected.

The whole point of synchronous detectors is to take this a step
further, keeping with the advantages of beating a locally generated
signal against the incoming signal. But the actual bit that synchronizes
things ensures that the locally generated "carrier" is right where the
incoming signal's carrier is, and then there can never be a beat between
the two.

Source record: 97071

I posted earlier after buying the Radio Shack 12-150 ... and I'll be the first to admit that this radio was my first foray into DX ... but I've been disappointed in the radio overall. It has a simplistic attractiveness to it, and it has PLL, but the knobs are real cheap plastic (and will probably have a short lifespan!) and the reception hasn't been as great as I'd hoped for a radio that was boasted as being "extreme range." The SW capabilities are very weak, but that might be my inexperience.

I have spent hours navigating through this message board and getting advice, and I've decided to return this radio and spend a lot more than I'd planned and get the Sony 7600gr. I sure appreciate all the knowledge and experience that people share on these message boards! I'm going to hang onto the 12-150 a couple more days so I can try them side by side for my own curiousity to learn how different radios function.

For the earlier posts, I enjoy a good sound, but it's not my driving factor ... it probably was when I was a teen and was dialed into FM, but I'm mostly listening to talk radio programs, so to get a weaker speaker from a radio with stronger reception is a trade that I'm willing to make.

That's just my humble opinion!

833. Sony 7600gr newbie questions

Newsgroup: rec.radio.shortwave
Date: 2006-11-08 04:13:01 UTC
From: jamman <luke19v10@gmail.com>
Message-ID: <1162959180.954508.9170@m7g2000cwm.googlegroups.com>
Source record: 97073

I have just ordered a Sony 7600gr after having a bad first experience with another radio that wasn't all that great. I decided on this model after reading a lot of the industry and consumer reviews, and -- more importantly -- reading a lot of the suggestions on this message board. If anyone can help me with a few basic questions, it would be greatly appreciated!

Is there any difference between using a power cord and using batteries?

In trying to boost reception on my first radio, I relied on a longwire antenna. Can this be used to boost the AM reception on the 7600gr too? Or are there better suggestions for an antenna -- if one is even suggested.

Any quirks that I should be aware of also would be greatly appreciated.

I'm looking forward to getting the 7600gr, so thanx for all the great information on these boards!

Jim

What you may be experiencing is the high Q of the antenna. This results in a low bandwidth passed by the antenna. For example, if the Q is 200, then the bandwidth at 600 kHz is only three kHz. Anything above 1.5 kHz in the audio will be attenuated.

(note: I've assumed a value for Q. I don't know the real number for the SAT.)

835. pa0rdt-Mini-Whip

Newsgroup: rec.radio.shortwave
Date: 2006-11-08 05:08:48 UTC
From: Al Arduengo <al.arduengo@gmail.com>
Message-ID: <pan.2006.11.08.05.08.47.841109@gmail.com>
Source record: 97075

I ordered one of these things after reading a blurb about it while studying antennas. After placing the order I began to read reviews and was honestly somewhat skeptical. I need not have been.

I received it yesterday and finally put it up today. I attached it to an 8' section of PVC pipe and mounted the pipe at a 45 degree angle to the side of my house from a second floor window. I ran the coax down the pipe and into the window to my E1.

I really did not expect too much based on the reviews I had read which seemed luke warm most of the time. This thing utterly amazed me! I compared to the whip as well as my 75' long wire. It absolutely smoked the whip and performed significantly better than the wire. A quick gauge for me is how well I receive 5K, 10K, 15K. I have NEVER been able to hear more than one at a time. Today with the Mini-Whip, I heard 5,10 AND 15! Granted 15K was a little low but it was readable. Scanning the BC bands I found that compared to the internal whip (which is fairly good on the E1), I was able to pull up signals that were buried in a noise floor at about S4, to +20 over S9 in some cases. The average increase in strength for any frequency I checked was 2-4 S units and often to +30 over S9. And the really neat thing is that the signal was very quiet. RTI with the internal whip was about S6 which is readable but skirted in noise. With the mini-whip it was +20 and almost full quieting! I expected this thing to be a noise amplifier. It is indeed NOT that.

Anyway, that is my initial and not-so-scientific impression of the pa0rdt-Mini-Whip. I feel like I have just discovered SWL after doing it for 3 years.

Congrats to Roelof for a great work!

Best,
-Al

Hi Jim:

I have a SONY ICF SW7600GR and enjoy it. As with most portables, It's best to use batteries. I use rechargables in mine and they work great lasting around 30+ of play hours before recharging is necessary.

Some helpful hints: The RF attenuator works on both AM and FM. If you live in a city, you may need to attenuate the FM to avoid overloading and unwanted images.

You'll love the sync detect for AM. It allows you to dratically reduce interference from strong stations when listening to weak ones on a nearby frequency. For example; if you are trying to listen to a signal on 1200 KHz and there is an interfereing one on 1210 KHz, switch the set to lower sideband and turn on the sync detect. The interference from 1210 KHz virtually vanishes! If there is an interfereing signal on 1190 KHz, switch to upper sideband with sync detect on.

The SONY ICF SW7600GR has pretty good sensitivity on MW, but not excellent. It's a coat-pocket size set and obviously doesn't sport a big internal ferrite bar for MW. However, place it in the circumfrence of a proximate loop and its MW sensitivity becomes supercharged and will hear just about anything out there!

The SONY ICF SW7600GR does quite well on SW. I use mine with the optional SONY AN-LP1 amplified SW loop antenna. That combination works quite well. You can use a long-wire as well.

The audio is good for a radio of its size. But if you want bigger sound, you can feed it into an amplified speaker system or just listen through headphones. Speaking of headphones; the FM stereo simply sounds awesome through good headphones with this receiver. I find that there is a bit of amplifier hiss heard through good headphones, but most good headsets have an in-line volume control which one can reduce slightly to make the hiss unnoticeable.

Hope that helps,

Wayne

It's not so great. In looking at NH and MA only, I found several city names misspelled, and numerous PL's missing. There is no info at all on if repeater have PL out.

Hi Father Mike,

Thank you for your replay. Yes, since a view days I'm a member of de TT3x350 Yahoo group end yes I have already post the same message in the group. But no replay sofar.

I bought the rx350D with the keypad and the TT speaker and I find it an wonderful Radio. Compared to my TTrx340 it does an very good job! Filters of the rx340 are better but the sound of the rx350 is very good! The TT speaker is very good to my ears, so I'm happy with this radio.

My shack is totaly USA made: TT (rx350, rx340 and rx320) and Drake (r7 and r8b). And from Radio Shack the Realistic DX-160 with speaker, my very first radio from the seventies.

Thank you,

Hans from Scotland.

Thank you Michael Black:

> Assuming you are treating the AM signal as an SSB signal (ie using
> an SSB filter and the product detector for demodulation), the beat
> is hardly unexpected. The AM signal has a carrier, and then you've
> got a "locally generated carrier" in the receiver.

Yes that's the way I tuned the AM signal as an SSB signal. (ECSS ore
AMU - AML) In the passband of the filter I hear an carrier, even if I
have proper tuned! (LSB or USB = the same)
When I tune a AM signal in AMS (both sides) I can not hear this
carrier.

> The point of tuning the AM signal as SSB is that the narrower filter
> knocks out the unwanted sideband, and attenuates the carrier of the incoming
> signal enough that it is too weak to cause a noticeable beat against
> the receiver's BFO.

Even with a very narrow bandwidth I still hear the carrier!

> But if things aren't tuned properly (be it the BFO in the receiver
> isn't adjusted properly, or the main tuning isn't adjusted properly)
> then there will be a beat note, and that's expected.
> The whole point of synchronous detectors is to take this a step

> incoming signal's carrier is, and then there can never be a beat between
> the two.

Well that's the point I think, things are not proper tuned inside or
are not in line with each other.
There for the radio cannot attenuate the carrier because of that.

Question: is it better to send the radio to TT UK ore is this something
every techie (HAM techie) can fix this?
>
>
> Michael

Thank you Michael, and sorry for my bad english.

Hans

>> Both are superb!

The SW100 was my choice for backpacking and camping many years ago. I
was impressed enough to buy another when it got broken.

> The smallest and best portable shortwave radios ever made:

Agreed.

> The Sony ICF SW-100 is very good but needs the AN-LP1 antenna to perform
> well.

Many folk have suggested that Sony's little wire extension aerial,
about 15 feet of wire in a little plastic reel that clips onto the
aerial, gives as good results as AN-LP1 if erected vertically (e.g. up
into a tree), and sometimes better.

For home listening I've strung out a 25 foot nearly vertical wire,
which gives a good improvement over Sony's 15' reel. If reception was
a problem backpacking (which I've never found in the UK -- the fully
extended whip is nearly always good enough, and the reel for difficult
cases), I'd simply consider taking some extra wire along. Very thin
stuff is fine. With some string and a stone you can throw the string
over a branch and pull up a vertical wire.

That's true if operating the SW100 open. But if moving about you can
operate it closed, and it comes with a little pseudo-leather
semi-pouch which closes over the lid snap, which both cushions falls
and stops the lid opening in a fall. The volume control and an earphone
jack are accessible with the pouch thing closed. Pretty robust!

The performance of the SW100 and 7600GR are pretty much the same,
except that the SW100 is much smaller and has a squeakier speaker. The
SW100 os basically a miniaturised 7600. But on headphones they sound
the same (both extremely good). A ngelcted point of these radios is
that they not only have a phone socket, they have a line out socket,
and can deliver superb audio quality of FM to both earphones and an
external hifi.

Wrong. In the case of an electromagnetic field, Gauss' law is only
one of four equations (Maxwell's equations) that are needed to
determine the electric field strength. Since a changing magnetic
field can produce an electric field too (Faraday's law), Gauss' law is
not enough. The only time it is sufficient is in the electrostatic
case.
```

Fortunately, the case under discussion doesn't require the solution of a set of partial differential equations (Maxwell's equations), because the solution has been incorporated into the idea of the impedance of free space. That includes the permittivity of the medium (as used by Gauss' law) plus the permeability of the medium, and it allows one to express the power density in space with an Ohm's law type of equation that involves only the electric field and the impedance.

That simple equation says that 5 watts of radiated power will produce an electric field strength which is 40 times larger than that claimed by N9OGL. That's why I asked him if he'd been consulting with Woger again.

Perhaps he's been consulting with you instead. You just got an "F" in electromagnetics.

==========
God said, "div D = rho, div B = 0, curl E = -@B/@t, curl H = J + @D/@t," and then there was light.

Stanley, you don't know anything about it, you can't even find the
correct ARES website for Marshall County, WV. You are a know-nothing
fucktard, as always.

P.S., asshole, what's the make and color of Roger's car since you say
there is a webcam pointed at his garage. BWHAHAHAHAHAHA!

--
Saggytits Lee (Stagger Lee@houston-hunks.com) fails to back up his
"webcam story" when he changes the subject with lame excuses when asked
what type of car Roger drives and it's color in
<night.vision.woger@houston-hunks.com>:
"Those newer webcams include automatic switchover to night vision mode
when it gets dark, but the pictures are in that typical blue-green
monochrome mode, and it's tough to make out fine details."

Saggytits Lee steps on his own tiny dick when he tried to correct
somebody else's English use first by saying one "operates" a dictionary

instead of reading it, then uses "things" instead of "thinks" in
<jewish.reggae.roger@houston-hunks.com>:
"Translation: Woger can't figure out how to operate a dictionary, let
alone correct someone else's language.But that's not surprising from
someone
who things that..."

Saggytits Lee manages to fumble again when he tried to backpedal on his

improper use of words by once again mangling the sentence in reply
<gweasy.long.hair@houston-hunks.com>:
"The word "operate" can be a synonym "use" in certain contexts"

Saggytits Lee (SLee@houston-hunks.com) talks out of his fat ignorant
ass again in:<secwet.googley.woger@houston-hunks.com>:
"did you know, Woger, that some of the anonymous remailers are operated

by the CIA?"

Saggytits Lee fucks up again and thinks Roger Wiseman has "long hair"
in <st.paul.hates.wogers.hair@houston-hunks.com>:
"Long hair like yours"

Saggy tits Lee, unthinking fuckwit, apologizes and makes excuses for
his lack of rational reasoning ability in Message-ID:
<wogers.sig.cwacks.me...@houston-hunks.com>:
"an inability to "rationalize" is a highly desirable trait."

Backpedal Boy Faggot Lee admits he's a poor bastard in
<glen.dale.tunnel.woger@houston-hunks.com>:
"Unlike the rest of us poor bastards..."

Stagger Backpedal Boy Lee who claims to be an expert on everything
electronic/computer
reveals why he's such an "expert" because he plagiarizes from other
sources in <woger.steps.in.anotherpile@houston-hunks.com>:
"I finally quoted the Intel literature..."

BACKPEDAL BOY Lee <StaggerLee@houston-hunks.com> whined that he
celebrates his half-black heritage by
observing Kwanzaa, and validating the fact he is an illegitimate
whore's child in <it.was.something.to...@houston-hunks.com>:
"A holiday made up by a convicted felon? You bet I celebrate
it."

In article <stupid.imposters@houston-hunks.com>
Stagger BACKPEDAL BOY Lee <SLee@houston-hunks.com> the "BOY Blunder"
whined more netcopping
threats and erroneously got the idea I was on AOL in his stupid
statement:
"Stop impersonating Lloyd, Woger, or you could lose your AOL account
again. All Lloyd has to do is to complain."

BACKPEDAL BOY Lee <SLee@houston-hunks.com> whined that he celebrates
his half-black heritage by
observing Kwanzaa, and validating the fact he is an illegitimate
whore's child in <it.was.something.to...@houston-hunks.com>:
"A holiday made up by a convicted felon? You bet I celebrate it."

Plagiarising hypocrite BACKPEDAL BOY queefed his hypocrisy in
<slee.rulez.while.woger.dro...@houston-hunks.com>:
"I doubt that you copied his noriginal post, but suspect that
you both copied yet another post.
..the Google database has foiled you again and simultaneously
dashed my briefly entertained thought that you might be capable
of writing coherent sentences after all."

Blonde joke stealer Fuckup "BACKPEDAL BOY" LEE whined
and still manages to fuck up the word "it's" and manages never to learn
anything
in <a75t70$3b...@dosa.alt.net>:
"Just like a dog doing its job on the carpeting, your nose must
be rubbed in your plagiarism. Unlike a dog, you won't learn anything
from"

BACKPEDAL BOY admits his mommy was a WHORE from a Chicago brothel
where he was conceived by his drunken bastard father in
<get.on.the....@houston-hunks.com>:
"Mayor Daily [ed.note: <sic>] awarded him with the keys to the brothels

of Chicago when he
returned from the Pacific theatre, and that's how he met my mother."

Fuckup Stagger Lee <SLee@houston-hunks.com> proves he's as ignorant of

music as he is in everything else when he utters the following
stupidity in <k8mn.is.a.god@houston-hunks.com>:
"Eric Clapton even wrote a song about Leila!"

"Stagger Backpedal BOY Lee" <SLee@houston-hunks.com> blathered more
idiocy when he tried to backpedal out of his fuckup in message
<ab8mq.cant.touch.k8mn@houston-hunks.com>:

"On one of the most complete web sites of Eric Clapton music
(http://www.netmusicitalia.it/spot/archivio/v.html), we read that one
of the selections is:
2/01 Vidal bagnoschiuma Eric Clapton "Laila"
which is, of course, a different composition than the more familiar
"Layla" that SWR Boy was trying to discuss. Composed during a Clapton
visit to Helsinki, it was inspired by a gracious host named "Laila" --
the wife of then Assistant Ambassador David Heil."

Stupid Lee (Stagger Lee@ houston-hunks.com) provides yet another
example of his idiocy in
<way.way.beyond.woger@houston-hunks.com>:
"That's because transmission line loss and SWR are not directly
related."

BACKPEDAL BOY SLee@houston-hunks.com (Stagger Lee) talks tough, yet
fails to deliver
(I'm still waiting to lose my ISP) in
<pants.down.wiseman@houston-hunks.com>:
"Ready to lose that ISP too, mensa-boy, after trying to hide it for a
year?
Mess with me in real life, and you will always pay a price."

Fuckup BACKPEDAL BOY Lee PKB's to save his backpedaling ass
in <20031009200009.12137.qm...@houston-hunks.com>:
"You, on the other hand, always inject homosexual
content into every post you make. Psychologists would find that to be
an obvious case of projection; i.e., attributing your own internal
state to others.

Stagger Lee queefs his hypocrisy from his tiny testicles, since he
netcopped to
Zack Harvey himself in <3CE5A487.54059...@houston-hunks.com>:
"You lose, Shriveled Nuts, because you netcopped. It is in the
alt.flame FAQs."

Fuckhead Lee exhibits his hypocrisy, since he's the Google Queen
in <8474570...@houston-hunks.com>:
"Ah, I see that you are reposting old stuff by means of which you long
ago exhibited your profound ignorance"

Anonymous coward and all-around Fuckwit "Stagger Lee"
<SLee@houston-hunks.com> revealed his
hypocrisy and ironically admits he has no credibility by his own
definition in
message <3C36FDCC.76EC1...@houston-hunks.com> :
"Therefore, I find your story difficult to believe. Your own anonymous

status makes the story even less credible."

Faggot Lee slurps the ass of others, yet he fails to see the irony in
his blather of UKYABWAI in <3D17BD4C.8A1D1...@houston-hunks.com>:
"Pathetic sycophant."

Fuckwit Lee <S...@houston-hunks.com> proved he is a no-balls coward
when he added to his posts
in <news:3D1F8E0B.21B0D699@houston-hunks.com>:
"X-No-Archive: yes"

Fuckup Lee fucks up as usual getting his facts straight about a retest
letter which clearly indicated Wiseman was to retake the General exam,
the DCC letter gives no specific reasons why
and Fuckup Lee is too fucking stupid to notice Wiseman has an Amateur
Extra
ham license per several online databases in
<3F239C83.A22E1...@houston-hunks.com>:
"And you claim that you passed an amateur Extra class license exam? No

wonder the FCC had its doubts and forced you to retest."

"Fuckup Lee" <SLee@houston-hunks.com> wrote from his personal "hands on

knowledge" from being a rim jobber in message
<vroom.vroom.wo...@houston-hunks.com>:
"The human anal sphincter muscle is naturally contracted when relaxed"

"FUCKUP Lee" <SLee@houston-hunks.com> geography idiot and imbecile
fucks up as usual when he thinks Marshall County, Alabama
and Marshall County, West Virginia are the same place in message
<afvsc2$6a...@pita.alt.net>:
" Then what is at http://www.geocities.com/skywarncanwarn/ doodle
brain? It sure looks like the Marshall County ARES, and it even has a
place to
send email."

Fuckup Lee, unaware of the IRONY of his question, still fails to answer

whether or not he found the Marshall County WV ARES site which he said
was
http://www.geocities.com/skywarncanwarn/, a Marshall County, AL ARES
website in <3D4708C2.DD7E8...@houston-hunks.com>:
"Are you ever going to answer those questions, or are you going to keep

on running?"

Fuckup Lee lies and backpedals even though his article is archived at
http://news.interbulletin.com/
was caught in another one of his bungling fuckups.
in Message-ID: <aim734$73...@pita.alt.net>
"\FORGERYSTOMP/
Yes, as you just said "Google doesn't have it available." If no one
can look up the message by means of its ID, then the act of quoting
the ID is futile and meaningless.
Case closed, netkop."

Yes, you fucked up again....

: Dumbfuck, the Marshall County ARES doesn't have a webpage, try again,

Then what is at http://www.geocities.com/skywarncanwarn/ doodle brain?
It sure looks like the Marshall County ARES, and it even has a place
to send email.

"Fuckup Shemale Lee" <S...@houston-hunks.com> whined like a fucking
spoiled little girl (which he is) in
<3brnq721213nsld2n...@houston-hunks.com>:
" I dare you to..."

Fuckup Lee will have his hypocrisy pointed out to him again the next
time he posts my quotes in <aimrjv$l8...@pita.alt.net>:
"Didn't I say that your quoting of message IDs is pointless?"

Faggot Lee posts the following slobber, not realizing his own whining
and netKKKoping past in <3C8BA6A5.19219...@houston-hunks.com>:
"You don't like it? I suggest that you use your OE news filters, or
simply skip the thread. No one is forcing you to read it, and you sure

as hell aren't going to get any of the participants to stop."

Faggot Lee admits he and the other anonymous cowards being owned by
AB8MQ in <3C93E88F.932B5...@houston-hunks.com>:
"Wiseman (who, by the way, "owns" us)"

Faggot Lee <S...@houston-hunks.com> confirms his SPANKARD status with
the following whine but the BITCH still follows up like a good puppy
dog in <a9c75d$go...@dosa.alt.net >:
"Basically, Wiseman bores me now, and I won't waste time on his replies

[blah blah blah]"

AIDS INFECTED BABY RAPER "Fuckup Lee" <SLee@houston-hunks.com>
proud of his illiteracy states the obvious in message
<986143249...@huffs-on-houston-dicks.com>:
"I normally don't read"

Faggot Stagger Lee confesses he and his family get this way when the
prospect of licking testicles (something he doesn't have) is made
available in
< 12417$Y17.5...@houston-hunks.com>:
"We are overjoyed."

Fuckwit Lee finally admits his SPANK at AB8MQ's hands yet another time
in 3C4AE592.6A0CD...@houston-hunks.com:
"[Any followups by Wiseman will be ignored.]"

Fuckup Lee, who fails to "grasp" the concept that "slander" is
spoken and "libel" is written, would be better served if he just stuck
to grasping nutsacks, incoherently babbled
in <3C4AE592.6A0CD...@houston-hunks.com>:

"COTSE seemed to have the laughable notion that what Wiseman was doing
was exercising freedom of speech. Slander is of course not protected
speech in the US, but the concept that even free speech has its limits
seemed to be impossible for Steve Gielda -- COTSE's owner -- to grasp."

Chickenshit COWARD Faggot Lee pathetically tries to justify his hiding
behind anonymity in <3B8FFFF5.143FA...@houston-hunks.com>:

"...readers have already had uninvited people show up at their
homes, have had people subscribe them to magazines and book clubs, have

received hang-up calls in the middle of the night, have had poison pen
letters written to their neighbors and employers, and have had poison
pen email sent to their ISPs in an attempt to get their accounts
canceled. That's not a "what if" scenario either: It has happened
repeatedly to certain members of these news groups, yours truly
included (one person has emailed repeated lies to Altopia in an attempt
to learn
my identity). One of our readers has even had to go to the courts and
obtain an injunction against one of those nuts.
I choose not to give insane people like that any kind of edge in
physically locating me, and if you think that's "cowardice", you are
only demonstrating your profound ignorance of Usenet and of the kind of

people who read these posts."

Then the no-balls coward ends his feminine cuntly whining with:
"And do you know what else? I AM SICK TO DEATH OF THOSE WHO REPEAT
YOUR

TIRED OLD, IGNORANT REFRAIN. Until you learn a few things, you ought
to shut your arrogant mouth."

Staggering Drunk Lee, the "Pulitzer prize award-winning writer"
slobbered the following Ebonics in <9a56ue$hi...@dosa.alt.net>:
"I hope yourself takes the advice you are giving to yourself."

SPANKARD Faggot Lee admits he's cross posted in order to help his
pathetic, syphilitic ass win a flame war, if you can read his chicken
scratching
EBONICS in <3AA5A686.E2ACE...@some.net>:

"I *have* seen to it that some of JBO's irrational posts show up in
alt.2600, because the owner of cotse practically lives there (tell you
something?), and I wanted the owner of cotse to ?>xperience JBO's posts

first hand. Cotse is doing a service to no one when
t confuses freedom with license -- the typical error of the neophyte
do->ooder -- and Roger's posts are a prime example of the typical
esults that error."

Child abuser and FUCKUP Shemale Lee (SLee@houston-hunks.com) whined to
the newsgroups as usual and admitted his defeat with a SPANKING by
plonk
and his repressed wish to suck sperm by projecting it onto others in
<kc8jbo.sucks.sperm@houston-hunks.com>:
"You know what? I think I'm going to add cotse and mailandnews.com to
my filtering rules. I'm bored with you, Mr. Scatologist....<plonk>"

SLee@houston-hunks.com (Stagger Lee) confessed to his SPANKARD status
in <nuking.waldo@houston-hunks.com>:
"Waldo has the honor of being the first poster in this news group that
I've ever killfiled. To make sure he stays killed, all posts and all
followups to posts from mailusenet.com will be nuked before I ever see
them."

Fuckwit SLee@houston-hunks.com (Stagger Lee) supports illegal computer
activities and terrorism in MsgId:
<pimple.on.my.ass@houston-hunks.com>:
"But I *am* delighted that cotse was hacked and DOSed to the point that

it can't operate this weekend."

STUPID ASS "Stagger "king of wishful thinking" Lee"
<SLee@houston-hunks.com>
blathered out of his well-reamed ass his hope to regain some face

in message <0428120427.2...@houston-hunks.com>:
"One guess has it that KC8JBO lost his ability to post through cotse"

"Stagger Pee" <SLee@houston-hunks.com> whined like a little girl in

Seems to me the frequency is 6739 USB. It's a GCCS ex-GHFS frequency. I heard Andrews up with the frequency list at 1301. One will hear a lot of encrypted messages on the frequencies(s).

Hi

I would like to replace the power pack with something with a larger capacity. I followed the instructions to remove the two black trims and 5 screws, and can take out the power pack, but it consists of 3 AA(?) cells wrapped in a moulded plastic container, arranged in a triangular cross section, with a wire running to the motherboard. The question is, has anyone else experience of replacing this?

Are you in a rural, urban or suburban location? Have you grounded the
coax shield in any way where it meets the antenna? What kind of antenna
were you using before?

I tried the mini-whip and was disappointed, so I'm curious about why it works so much better for other people than it does for me.

I'll cast another vote for the DX-399. Mine came with a universal power supply. The wall wart can run on 110 or 240 volts AC, and there is an adapter that lets you use US- or European-style outlets. The big disadvantage is that they were discontinued years ago. I don't know if you can still buy the wall wart separately. If you can, it will work with the Sangean 606. You won't be in a tent every night.

I guess that every radio recommended will receive not just SW, but MW and FM as well, and maybe LW too. You will want to hear the local news and weather.

The proper power supply for Sony radios are expensive - $100. (I have one)
In my experience using both batteries and the Sony power supply, the power
supply is excellent.

> In trying to boost reception on my first radio, I relied on a longwire
> antenna. Can this be used to boost the AM reception on the 7600gr too?

No.
For shortwave consider the Sony AN-LP1 antenna. Highly recommended but
currently hard to find.

> Or are there better suggestions for an antenna -- if one is even
> suggested.

I use a the Terk AM Advantage loop with excellent results.
Cradle the 7600GR inside the Terk loop.

> Any quirks that I should be aware of also would be greatly appreciated.

None. It is the best portable shortwave receiver in its class, period.

Steve,

I am in a suburban neighborhood north of the DFW area (Allen specifically). I did not ground the coax shield. I have been using a 75 ft wire at a height of 8', or the internal whip until now.

I attached the mini-whip to a PVC pipe of about 8 ft length. I extended it out from a second floor bedroom window at about a 60deg angle which allows me to anchor it to the window sill and secure it to the roof overhang. This places the mini-whip at a height of about 20ft and a distance of about 4ft or so from the side of the house. I ran the coax down the pipe with cable ties straight to the power feed unit. The power feed is connected to a 12V deep cycle battery and directly to the radio via a 1ft coax. Roelof and other users have stated that it only works well if you get it high and as far away from noise sources as possible.

Honestly, I am very impressed. It has a much lower noise floor than using the wire and provides much more gain than the internal whip. The wire could pull in some stations that are, for me, pretty weak but I always struggled to understand through the noise. The internal whip is pretty quiet but just couldn't bring in anything much. Last night I heard dozens of stations I had never heard before, and the ones I had heard before were dramatically clearer.

Now I need to state that I am by no means a DXer. I simply do not have the antenna space or the wife's permission for a large loop or anything like that. I guess that makes me a BCB listener. That's ok though. I am very excited about this antenna and plan on spending a lot of hours re-exploring the bands.

If you want, I can take some pics of my setup and area to which you can compare your own. It might shed some light.

Good luck!
-Al

A Canadian take on the disaster the Democrats will bring, not only to America, but to the world.

"On the Baker-Hamilton plan, Congress will take the war in Iraq out of Mr. Bush's hands, as Congress took the Vietnam War out of Nixon's. Iraq will then be delivered to Iran's ayatollahs.

We can also expect Nancy Pelosi's Democrats in the new Congress to do everything in their power to recreate the Watergate environment, both for their own electoral prospects in 2008 and to make an example of the lame duck in the White House. The mainstream media will oblige with 24/7 coverage of whatever they allege."

Teaching Johnny about Islam - Coming to a school near you.

In our brave new schools, Johnny can't say the pledge, but he can recite the Quran. Yup, the same court that found the phrase "under God" unconstitutional now endorses Islamic catechism in public school.

In a recent federal decision that got surprisingly little press, even from conservative talk radio, California's 9th U.S. Circuit Court of Appeals ruled it's OK to put public-school kids through Muslim role-playing exercises, including:

Reciting aloud Muslim prayers that begin with "In the name of Allah, Most Gracious, Most Merciful . . . ."

Memorizing the Muslim profession of faith: "Allah is the only true God and Muhammad is his messenger."

This coming from a former BBC news camerman.

Like John Simpson, who this week leapt to the defence of BBC "impartiality",
I began my near 40-year broadcast career in BBC TV news. It was impartial
then; it certainly isn't now. I have seen my own visual material presented
in an entirely different timeline, totally distorting the actual event that
I witnessed, and at no time did the intellectually lazy journalists ask me
what I witnessed. I also have seen raw camera material destined for both BBC
and ITN come out in completely different forms on air.

Nick Cohen has written a new book. It's called What's Left? How the Liberals Lost their Way. It will be published in February. I have read it; it's excellent, and you should pre-order it now. The book dissects the oddity - and the scandal - of how segments of the Left, in their willingness to discern progressive qualities in the most reactionary causes, went over to the other side of the political divide. The subject is serious, but the personalities and opinions are often laughable, and there is much wit as well as eloquence in Nick's account.

I guess the vast majority of the American voters are now 'kooks,'
according to your definition.

Why is it that the vast majority of the right cannot intelligently
reply to any issue, but invariably resort to name-calling and
demonization of the opposition?

It's just one of a vast number of reasons that YOUR SIDE LOST, and LOST
BIG!!!

God Bless America!
She's waking up at last, and she's waking up pissed off at you guys.

http://consortiumnews.com/2006/110806.html

American Voters Just Say No
By Robert Parry
November 8, 2006

By a surprisingly decisive margin, American voters rejected George W. Bush's designs for transforming the United States into a one-party government run by an all-powerful executive waging endless war abroad and throttling constitutional liberties at home.

In essence, the voters asserted themselves as the final check and balance in the U.S. political system, giving the Democrats control of the House of Representatives and putting them within reach of a Senate majority as well.

The results were even more devastating for Bush and political adviser Karl Rove because the President had sought to turn the Democratic tide by nationalizing the election and taking to the stump with harsh attacks. Bush equated a Democratic win with a victory for the "terrorists" and a defeat for America. [See Consortiumnews.com's "Bush Will Say Anything."]

Initially, that Republican scare strategy, combined with the news media's obsession over Sen. John Kerry's botched joke about Iraq, seemed to be working. Over the last weekend, a Washington Post poll showed the Democrats' double-digit lead shrinking to six points. Just two days before the election, a Pew poll pegged the Democrats' advantage down to four points.

But, in the campaign's final hours, the American people appeared to have refocused on the frightening prospect of giving Bush and the Republicans another blank check. A pre-election CNN poll put the Democrats' lead back to 20 points.

That surge carried over into the actual voting, with the Democrats routing the Republican House majority, ousting vulnerable Republican senators and inching toward possible control of the Senate.

Constitutional Battle

The outcome sets the stage for a potentially historic fight over America's constitutional system. Bush has vowed never to give an inch on the Iraq War and Vice President Dick Cheney promised that Bush's "war on terror" policies will continue "full steam ahead" whatever the voters want.

In one interview, Cheney declared, "you cannot make national security policy on the basis of that [elections]. It may not be popular with the public. It doesn't matter, in the sense that we have to continue the mission [in Iraq]."

Without doubt, the White House would have read the significance of the voters' judgment differently if Republicans had been returned to control in Congress. Then, Bush would be boasting about a new mandate from the people and rolling over any remaining opposition.

But the significance of the Republican defeat cannot be easily brushed aside. Beyond the issues that popped up in exit polls - corruption, the Iraq War, etc. - the news media should have taken into account the American people's discomfort with Bush's assertion of "plenary" - or unlimited - power.

By rebuffing the Republicans, the American people were saying they want to keep their Republic. They were defending their quaint Constitution and Bill of Rights; they were embracing the clunky notion of checks and balances; they were endorsing that old-fashioned idea about the rule of law.

The nation's unease about Bush's thirst for dictatorial powers has always been an underplayed issue, troubling Americans across the political spectrum from liberal to conservative.

It remains to be seen what the Democrats will do with their new congressional clout. But it can't be disputed that the voters just said no to President Bush. The American people rejected Bush's grim vision of endless war and the end to the Republic.

Robert Parry broke many of the Iran-Contra stories in the 1980s for the Associated Press and Newsweek. His latest book, Secrecy & Privilege: Rise of the Bush Dynasty from Watergate to Iraq, can be ordered at secrecyandprivilege.com. It's also available at Amazon.com, as is his 1999 book, Lost History: Contras, Cocaine, the Press & 'Project Truth.'

Iraq has not been America's second Vietnam: It has been America's Iraq. The Americans have not lost the war there to al Qaeda or to an Islamic Jihad. The Iraqi people reject the belligerents-Al Qaeda and the U.S.-equally. Do not, however, be in too much of a hurry to admire the courage and wisdom of the heroic people of Iraq. For the most part, its glorious Shiite and Sunni sons are busily slaughtering each other with unbelievable cruelty and efficiency.

It is not easy to decide what their real motivation is: whether a theological dispute about the destiny of the Twelfth Imam, fond memories of the unity of their communities under Saddam Hussein, or a fight to control future oil revenues. With every new mass murder, however, the spiral of violence is given another twist, which makes fresh bloodshed inevitable.

They seemed almost to have forgotten about the Americans during the summer. American losses were very low at that time, but increased sharply in October to over 100 deaths when America tried to interpose its troops as a kind of shield between rival militias in Baghdad.

The absurdity of the present mission of American troops in Iraq is now evident. They are dying in an attempt to prevent two groups of fanatics, which equally hate America, from killing each other.

Shortly after the Nov. 7 mid-term elections this absurdity will be terminated irrespective of which party is the more successful. The likelihood is that the Americans will reduce their military contingent and redeploy it to a more or less loyal and even friendly Kurdistan, leaving the Sunnis and Shiites to slug it out.

Almost inevitably, the confrontation between Sunnis and Shiites will spread in one way or another, drawing in most of the countries of the region.

These highly probable developments in the coming months will also have consequences for Russia.

The Russian political elite (and, indeed, its counterpart in Europe) will view the collapse of America's attempt to advance democracy in the Middle East with profound gloating satisfaction. There will be a very considerable financial windfall for Kremlin rulers due to Russia's new found status as an "energy superpower." This will come from the inevitable surge in oil prices when such oil-producing countries as Iran and Saudi Arabia are drawn into the conflict on different sides.

For these psychological and financial pleasures of its "elite" our country is likely to pay a high geopolitical price. Let us not forget that other war in Afghanistan where there seems to be a great coming together of all the drug-producing forces of society, from the Taliban to the generals of the

former Northern Alliance to the close relatives of President Karzai, on a shared platform of hostility towards NATO.

NATO, on which we rain curses daily and which we do our best with war cries to drive from its bases in Central Asia, is far from creeping up on Russia through Georgia and Ukraine. Right now, with its last, failing strength, it is protecting the southern borders of Russia's Commonwealth from the advance of Islamic radicals.

In the context of Iraq's failure, evident Pakistan capitulation to and collusion with the Taliban and growing Western casualties, liberal Western public opinion, both in Europe and in North America, will demand the withdrawal of NATO troops from Afghanistan, and the Russian political elite will experience its last profound moment of satisfaction. Having left Afghanistan, NATO as a military and political institution will cease to exist.

The Islamic radicals, however, inspired by another historic victory, will move to unite with their brothers in the faith in Kyrgyzia, Tadjikistan, and Dagestan. They will foster a rebellion in the Fergana Valley and other hotspots where the ground has already been prepared for the noble ideals of the Islamic revolution.

This advance of the sons of Allah will be halted on the approaches to Kazakhstan-not by Moscow, but by Beijing. Russia's great strategic ally in the Shanghai Co-operation Organization cannot and will not allow the Islamic radicals to swallow Kazakhstan, which in the future is to be China's principal supplier of energy resources. Having crushed the Islamists decisively, China will go on to establish a military and political protectorate over the entire region of what used to be Soviet Central Asia. After this, the geopolitical fate of Siberia and the Russian Far East will be sealed.

When you say "the guy ultimately responsible for getting us
into Iraq", do you mean:

a) The Sock Puppet himself?

b) Cheney?

c) Wolfowitz?

d) Perle?

e) all of the above

"""

I wonder about the capacity of the cells in the battery pack. It may be that they are getting old. One suggestion is to replace them with freshly charged 2300 mah AA rechargeable nimh cells This would let you keep the plastic container. The 2300 mah cells might have enough capacity to do the job. "Energizer" makes AA cells that are commonly available.

I apologize for cross posting, but I do not know the prime group for this reply.

When the truth is known, a lie is a deliberate attempt or a deliberate action to mislead.

A lie does not require an oath to become a lie. A lie is a LIE in all circumstances.

Hi

That is what I wanted to do. Unfortunately, the plastic container
seems to be moulded around the cells so I cannot remove it wothout
destroying it, and I wondered just exactly what was inside, ie, whether
what was inside would still be usable. I have found Panasonic cells
extremely good at retaining charge and misuse.

Eg

ve3... wrote:
> I wonder about the capacity of the cells in the battery pack. It may be

<snippage>

Though the turnover in the House of Reprehensibles looks impressive, the fact of the matter is that there is not now, just as there was not in the past election cycles, a clear "mandate" for change of any kind. The House and Senate are still fairly evenly split. The Senate, even if Virginia and Montana Senate races go to the Democrats, will be so evenly split that nothing will be accomplished without bipartisan support for a given issue. The House is definately a Democrat majority, but again, it's no mandate indicating that "America wants Democrat ideals". It means that roughly half plus a few here or there wanted the current bunch of bums/thieves/scoundrels out and replaced with ANYTHING new.

I have seen this forum awash with hatred and reviling for the past few years, with people from both ends of the political spectrum making endless ad hominem attacks on the others, villifying, demonizing, minimizing. This does not become any of you. The only way that we ever get anything significant done is if we work together on it. This doesn't mean "my way or the highway", as both the right and the left have been acting. It means compromise from both sides, working together on the things they all agree on, and discussing the things they can't, until they come up with a common ground that will work for both.

Gloating isn't pretty, no matter who's doing it, and serves only as an irritant and a wedge.

Yes I hear it, but I haven't been able to listen enough to know if there
is an improvement or if it's just changing season propagation.

For antenna's, generally bigger is better.

That's funny, the people in uniform doing the clean-up work over there
think we're winning, they can't understand why the democrats and the main
stream media say the things it says regarding Iraq.

Of course now that the democrats have taken over, we have lost Iraq. We
weren't defeated, we'll just cut & run.

Terrorist worldwide, rejoice. Democrats have handed you another victory!

That was a smart move for Rumsfeld. Why try to protect American and win
the wars when the democrats are going to do everything they can to prevent
it.

All along the democrats were more concerned about terrorist rights,
instead of terrorist deaths.

Hey Stupid,

The democrats are going to be the ones to drive us from Iraq, not the
terrorists, they're dying. Slowly but surely, they're dying. And
everytime we kill a terrorist, you libs act like you just lost a loved
one.

We, r2000swler, and I borrowed one from a friend in Loiusville, where
the poll
workers try to strangle voters, and while it is acceptable, it has
considerable
roll off below 500KHz and above ~25MHz. The WinRadio is also more
robust
and looke like it will survive for years in KYs nasty winters.

If you aren't into LF/NDB or want to listen above 25MHz the the RF
Junkie will
work fine. I have just discovered NDB and I am hooked!

The result of solving Maxwell's equations for the radiated field is
that the electric field strength in volts / meter can be used to
compute the power density in watts per square meter by means of the
simple equation

P = e^2 / (120*Pi)

120*Pi is the impedance of free space, as obtained from Maxwell's
equations.

Now that happens to be a pretty complete equation, and it can indeed
be used as it stands to figure out which power density, P, corresponds
to a particular r.m.s. electric field, e. You can also solve the
equation for "e" if you want to calculate the electric field when you
already know the power density. It is a steady-state solution, and it
excludes non-radiating fields (the so-called near field), but it is
good enough for most initial calculations.

So, no, one doesn't need additional equations, and one doesn't need
to worry about power division between the electric and magnetic
fields. That's already been included in the formula given above.

: none of which matter either

They only don't matter because you have the details wrong. If we
tried to get at the radiated field strength your way, we'd never get
an answer at all.

: what matters is the measurable filed strangth

If you can't estimate the field strength beforehand, then you CAN'T
possibly come up with a good initial station design. You'd have to
put something up and hope it works out. I suspect that's exactly what

Todd has done, and it is a very dangerous way to operate.

: to determine if Todd is legal or not you MUST prefrom the test and
: till that is done Innocent till found guility is ther Law

If the calculations suggest that Todd is very probably exceeding the legal electric field strenth (and they do), it is something that no sane station operator should ignore. Calculations are inexpensive: A certified field strength meter is not, and a NAL is even costlier.

If you need to turn up the volume like I always did at work then expect
20-25 hours. You'll know when its time to change batteries as it'll
just shut off instead of getting quieter.

Very good advice.

This is the best thing about the 7600GR!
>

A loop wiill help on MW, though it is quite sensitive on its own (but
no match for an RF-2200). Very selective with the synch so that'll
help.
>
> The SONY ICF SW7600GR does quite well on SW. I use mine with the

Definitely find an AN-LP1. Much better than using a wire on SW here.
Worth the money.
>

I really don't like the audio from its speaker at all, but if you are
using it at home you can indeed use a speaker system.
>
>Wayne

Wayne knows what he's talking about, all good stuff.

> >
> > Any quirks that I should be aware of also would be greatly appreciated.

This may not count as a quirk, but I found that the 7600GR makes a
terrible bedside radio. The tiny switches on the side need a firm push
to move and there are too many buttons to accidently hit when trying to
change memory frequencies, all of which require getting up to play with
the radio instead of relaxing with it. The Sleep Timer is nice,
though.

Source record: 97112

I've been reading about these and am intrigued.

These antennas are often mounted in a sloping configuration, but how steep can the angle be? I'm sure the steepness of the angle is going to effect the antenna's radiation pattern, but will how? Does it cause the antenna to become highly directional as the angle increases?

How do these antennas perform in relatively noisy environments? I've read that they're relatively slow to pick up local noise, but I'd like to hear about some people's first hand experiences with them.

Are these antennas inevitably eyesores to those philistines who don't appreciate the beauty of a good antenna? Is there a way to make them less conspicuous?

Thanks,

Steve

I think you are in an urban environment, which probably has a worse local noise spectrum than at Al's location. You also probably used an AC supply to power the antenna where Al is using a battery.

There is a good chance that if you stood on a ladder holding the radio
at the same location your reception would be about the same on the whip
although the levels would be lower without the active antenna
amplification.

Since the active antenna is an electrically small E mode active antenna
using a battery to drive it instead of a AC mains supply helped keep
the noise floor low so that using it was an actual improvement.

Note h'ever that the SW100, while small in itself, is a digitally
tuned radio, and thus eats batteries at least twice as fast as an old
fashioned analogue radio. If you factor in battery weight if a long
time away from chargers or shops, you might want to trade digital
tuning performance for analogue battery economy.

Or you could devise a battery charger running off a bicycle hub dynamo
:-)

The Sony SW100 is a general purpose receiver, which is pretty good at
FM as well as SW, MW, & LW.

Stay away from this radio. Quality control problems. With the AM switched to narrow, the thing is deaf except for a few locals. Sensitivity improves alot in the WIDE mode, but the tuning shifts... to tune 880kHz, I have to tune to 890kHz to center it

The FM is also bad... living near two 50kw'ers, the entire band is useless. The WX picked up the local station 20 miles east, but one of the 50kw'ers would bleed in if I moved the whip around.

Bass and Treble controls are reversed and the huge knob is not easy to work with (an UP/DOWN button would have been better).

Audio quality is OK. There is an AUX input jack. The diplay is nice, if not a little too bright (the backlight stays on with AC... it goes off after 5 seconds using batteries).

I got mine last Sat, it was the only one in the store.

Dynamite wire for an antenna? I never tried that one before,where do you buy the wire? Hey,I want to buy some old govt surplus portable Aircraft steel landing strips,seriously.I want to jack up three of my old vans in my back yard and put the strips down and let my vans sit on the strips.You know where I can buy some of those strips cheap? You know the kind of strips mean,they link together just like the ones we had/used in Vietnam.

Not a bad guess, but I actually powered it off an SLA battery. The problem wasn't noise though--or at least it didn't seem to be. I compared it to an LF-Engineering H-800, a Wellbrook loop and later a fairly short (roughly 30 ft) random wire attached to a matching transformer and fed with coax at a height of around 25 feet or so. All of these other antennas outperformed the mini-whip (though it was a close call with the H-800).

Ah well. I will keep the mini whip and no doubt have fun trying to figure out how to improve its performance.

Make no mistake, the odds of a terrorist mushroom cloud occurring over
a larger American city just improved this election due to the direction
of the Democrat party ideology now in control.

Hey Flubberman,

The USA and the "coalition of the duped" created the situation in Iraq
and all for no good reason! In case you haven't heard, the better part
of the 9/11 thugs were from Saudi Arabia not from frakkin' Iraq. In one

of the most stupid, most insane and most reprehensible acts, your now lame duck of a Presiduhhnt Bush decided to send in the troops. Putting an idiot like Bremer in charge and deciding not to use the remains of the Iraq army created a wonderful breeding ground for terrorists. You are getting your asses handed to you and you did it to yourselves. Putting a self-absorbed idiot like Rumsfeld as Secretary of Defense guaranteed failure. And failure is what you have! Apparently Rumsfeld didn't listen to Cheney when Cheney told him to "Get it right this time".

That little incursion managed to kill more innocent than guilty. Truly stellar!

Here's a joke for you:

Bush: Knock! Knock!
Rumsfeld: Who's there?
Bush: Iraq.
Rumsfeld: Iraq who?
Bush: Iraq my brains out to make you look good!

Valiants can be such a PITA. The Viking II was always much easier to
look after and operate. Yep, I know the Valiants have greater output.

Sloping the antenna is an attempt to cause it to be more broadband.
This is not much help on reception but allows the antenna to be used
over a wider range of frequencies on transmit due to a reduction in
VSWR.

The termination resistor causes the antenna to be lossy and helps with
the VSWR aspect on transmit but is no help on reception.

The matching section is also a wast of time on receive. You are better
off using a broadband transformer.

There is nothing great about this antenna for reception. You are better
off using a folded dipole.

I found the cure: put the rx350 on DC!! and everything is ok. The
internal psu is an bad one so the only solution to have no problems put
your rx50 on DC power instead AC; according to an technical man from
TenTec UK. They know this issue !!!

Cracked voluntarily self-immolates, in MID:
1159678991.838385.310840@m7g2000cwm.googlegroups.com

"When I told Abbie Hoffman that he was the first one who made me laugh
since Lenny Bruce died, Hoffman said, "Really? He was my god." The
combination of satirical irreverence and sense of justice that Bruce and
Hoffman shared was the real spirit behind the Yippies--a term I coined to
describe a phenomenon that already existed: an organic coalition of stoned
hippies and political activists who engaged in such actions as throwing
money on the floor of the New York Stock Exchange, then explaining to
reporters the meaning of that symbolism. Folksinger Phil Ochs summed it
up: "A demonstration should turn you on, not turn you off." So when
journalists link the Yippies with misleading bedfellows, at best it's
careless shorthand; at worst it's deliberate demonization. Osama bin Laden
wanted an aircraft to crash into the Pentagon. Abbie Hoffman merely wanted
to levitate it." -- Paul Krassner, http://tinyurl.com/ehu3v

???

I would disregard everything written above. The antenna is very
quiet for receive.

I found it to be 'quiet' because it really didn't receive very well.

I built two and chucked 'em both soon after.

I had a chance last night to see this baby in action.

Pretty good screen room, I couldn't pick it up in the parking lot on my
DX398.

http://www.casetechnology.com/implanter/rf.html

Of course the discription;"G1 13.56MHz RF Generator delivers up to 3000
Watts into a 50-W , non-reactive load. It uses a 3 phase, 208 Vac,
50/60 Hz power source, is water-cooled, and provides control signals
through a 25-pin analog/digital user port." is misleading. Under
typical use
only 50W are needed. Much more power is there if needed.

"...50-W, non-reactive load."

In this context, "W" means "ohms". (why not just say ohms? I have no
idea)

That doesn't necessarily mean that application requires more than 50
watts of power, but you can't tell from what's on that page.

The maximum this machine had ever used was around 30W.

A very contained field.

Somehow when I took Physics I never thought anyone would want to
"implant ions".

Killfiled by: directory; Anim8rfsk
"It's not nice to misrepresent Mother Nature."
http://www.lowgenius.net/kookway.htm
TEH WAY OF THE K00K
Never learn from your mistakes.
Always practice your mistakes; you may get them right.
Always pick on those smarter and tougher than you.
Always believe that only you know the TRVTH.
Never allow logic or reason get in the way of a good k00k.
When being overwhelmed by logic and reason: k00ksuit!
If you are going to be wrong, do it at the top of your lungs.
When caught in a lie: LIE!
When in doubt: Order the Crab Won Ton
Plagiarism is your friend. Use it.
Whenever contradicted; morph, start calling people names, and make false accusations. Include the children of your target in your allegations, even if they don't have any.
(06-Jun-05) When nobody else will listen, post to your own fan group.
(06-Jun-05) Obviously, since you have your own fan group, this must mean that you have fans. Post prolifically to your fan group - you wouldn't want to disappoint them!
(10-May-2005)Everyone reads usenet. Approval here means approval everywhere.
Post numerous blank posts, or posts containing only a message id.
Post numerous copy&paste web articles from crackerpot websites.
Never forget to call kookologists "k00ks."
If there are several, call them "sockpuppets" too
When all else fails, accuse various and sundry kookologists of e-mailing viruses to you. This is a sure-fire method of garnering sympathy and ensuring that the General Public will always see things your way. An especially effective sub-strategy here is to accuse them of infecting you with the 'Sasser' worm via e-mail.
Quote notorious scientists or writers - it makes it look as if they approve the drivel you are writing!
(9-Jul-05) Anytime your computer is infected with a virus, bogged down by spyware, attacked over your internet connection, or otherwise suffers from preventable problems, government agencies are responsible and are trying to silence you and are monitoring your computer files.
Ignore all traffic signs and feel free to trespass, you don't have to obey any rules.
Scare your enemies with lawsuits, police escorts and whines.
Always back up your empty (albeit noisy) threats with phony LARTs, false police reports, and harassing letters to the FBI and other gubbermint agencies.
Be vigilant in your redundancy. The more you repeat yourself, the more likely others will believe you!
If you can't find anyone as crazy as yourself to support you in the flamewars you start with the normal population, create sock puppets and

use anonymous remailers that shamelessly hang on every word you write.
(17-Mar-05) When dealing with law enforcement, remember that it is they who have the problem, not you. Be sure to inform them of this at every available opportunity, as they will surely appreciate your constructive criticism. Be sure to make them aware that YOU KNOW YOUR RIGHTS! ("The cops like that, when people know their rights. That way they don't have to read them to you on the way to the station." - George Carlin)
The more your fake personalities adulate you, the more respect you'll get!
When confronted with a reality that you don't like: Announce loudly that you are departing, never to return as long as there's an Internet. Come back in three or four days and claim you were drunk, hacked, abducted by alience, or forged. Alternately you can just not even mention your prior departure, and if anyone asks you about it, either ignore them or respond with something along the lines of "YOUR NOT THE BOSS OF ME! *PLONK*!" People really know you mean business then.
Always remain clueproof.
(20-Mar-05) Anyone who does not believe that you are the reincarnation of [$DEITY_OR_PROPHET] is obviously an infidel lacking in faith whose soul in in peril of everlasting damnation.
When responding to one line challenges, post paragraphs of rants and screed in response.
Incoherency is not a roadblock to poasting.
Neither is illiteracy.
Delusions poasted often enough become fact.
Claim you will destroy <insert newsfroup> for attacking you.
When spnaked, send cmsg for Fanboi newsfroup(s).
Find your Lame, Use your Lame, Be your Lame!
Post Edit when the TRVTH hurts.
Always sneck the offending newsfroups.
Always poast pictures of yourself so you can be admired in all your k00ky glory.
Always accuse others of the very acts you are guilty of.
Post lots of boasts about your high IQ and incredible talents.
(20-Mar-05) If you repeat a lie often enough, it becomes the truth. Anybody who fails to understand this is engaged in a deliberate campaign of misinformation and character assassination.
Always <plonk> somebody just before replying the plonkee!
The k00k considers itself the most intelligent person in any conversation, possibly on the planet. Other people are benighted and ignorant, and have been waiting their whole lives for the k00k to rescue them from intellectual darkness.
Write a self-published book and claim it a success. Bonus points for comparing it to "Mein Kampf" and/or the Bible.
Declare yourself equal to a deity of your choice.
Claim that you've come from other planets.
Claim thousands of past lives.
Frothing complaints carry far more weight when you send them from "legal@" some domain.
Nothing strikes terror into the hearts of your detractors more than

telling them that you're archiving their messages for possible use in the future.
Never forget that everyone else posting to Usenet is a paid disinformation agent looking to discredit you.
Usenet is governed by US law. If a poster in Romania killfiles you, he's obviously violating your 1st Amendment rights and can be sued.
Every news admin in the world hangs out in NANAU, and they're just dying to nuke the account of that meanyhead who just called you "fucknozzle". Drop 'em a line - that's what they're there for, after all.
AUK will be closed down. Just you wait and see.
They've nuked hundreds of accounts in the name of free speech and *yours* will be next.
The k00k will, without any trace of irony, lie, manipulate, impersonate, censor, and declare themselves powerful in ways ranging from the ability to have an account shut down to being God Herself, in order to convince people that they are not liars, manipulators, censors, or insane.
Abuse women while telling how many hundreds you've loved. Nevermind that you're one ugly motherfucker and that there were 30,000 femininas that thought you were a scumbag with bad teeth.
Remember that your ko0ky klaims are 'facts', and that 'facts' do not require proof.
Do not neglect to poast your responses to forums that the originator doesn't read. This will make the people in that forum very impressed with how you tear him to shreds without him being able to respond. They like it even better if you are off-topic for that forum.
Keep in mind that lack of evidence supporting your konspiracy theory actually _is_ evidence, of how effective the konspiracy is in hiding.
(06-Oct-05) When spanked, always retreat to the safety of the Ad Hominem.
(04-Aug-2005) When spanked mercilessly for days on end, proving with each poast just what an illiterate and ignorant fool you are, ALWAYS claim ownership of [person(s),froup(s)]. This works on so many levels. It inspires dread in your opponents that they will no longer be able to poast in their home froup and that they will eventually have to pay rent, to name just two.
Any problems with your poasts are the fault of the konspirators, who are trying to stop you from preventing the extinction of humanity.
Konspiracies that are able to subvert whole governments are always unable to silence konspiracy ko0ks.
The entire United States government is willing to spend millions of dollars for the sole purpose of harassing you.
Hollywood is making movies based on your personal life.
Do not consult psychiatrists or other mental health professionals. They are part of the konspiracy, and will sedate you and lock you away and keep you drugged if you tell them the truth.
Numerology and Astrology are respectable sciences and are useful for proving your case.
Everyone is Tim Hill, or David Green, or...
There is a fine line between trolling and kookery. Find that line and cross it repeatedly. When you are killfiled and/or LARTed for net.abuse

as a result, claim victory. If you lose multiple accounts, this merely proves that you are indeed a world-class troll, with a black-belt in manipulation.
If you respond to every post someone else makes, they're obsessed. If they respond to less than 1% of your posts, they're even more obsessed.
Publishing people's real names, addresses, and phone numbers when there's no other way for you to come out of a flamewar with any dignity is cool, and proves that you are a master of secret internet information stores, and absolutely not to be fucked with.
Everyone is out to get you. You can put a stop to this by telling everyone that they're out to get you at every available opportunity.
You are the only sane one.
Those that give you a hard time about morally bankrupt things you yourself admit to are just persecutioners of the new inquisition.
Yelling in all caps and cursing at your detractors is debate. Your detractors laughing at you with sarcastic remarks is obvious anger and jealousy.
If doing something results in the loss of your account, legal hassles, or blunt trauma injury, do it again. It always works better the second time.
Asterisks, lots and lots of Asterisks.
Poking holes in kookscreed is stalking, and is a felony.
K00ks LOVE to "connect the dots". They are, of course, dots that only the k00k can see.

You mean 2008. By that time we will be overrun with illegal aliens, but no matter, as Al-queda, after celebrating our elections, is now formulating plans for the biggest terror attacks yet, knowing Congress will have no guts to do anything about them.

If you need 4X4, better work it now, because the first thing the Iranians will do is nuke Israel.

cuhulin,

You may wish to ignore me here, but I did some math and came up with a startling statistic re Chuck Harder.
CH has been off the air continuously since October 18 ... as of yesterday, that's 22 straight days - over three weeks.
The longest previous period of silence from CH was two weeks. And that goes back to at least 1991, when I first heard the 400-lb. populist government-basher.
This is also the first time CH was off the air for an extended period after a sudden, unexpected event. The last time that happened was about a year ago when he injured his hand; he was off for only a day, however.
If what I think has happened to CH actually did happen, I'm sorry. I know he meant a lot to you, but I also know there's a bunch of radio talk show hosts out there just like him - Bo Gritz comes to mind. And, unlike me (and CH), Gritz served his country with honor and distinction.
Indeed, I think I recall your mentioning Bo Gritz in some of your posts here.
Please understand: I am not happy at all over this - assuming my theories about CH's fate are correct. I am relieved, but that is not the same thing as being joyous. Indeed, I'm gonna kinda miss the guy.
I will admit that he opened my eyes to issues such as crime, poverty (both rural and urban), national sovereignty, manufacturing, alternative technology (medicine, energy, space, etc.), and property rights. For that, I am grateful.
All this said, I might be way off base here. I might tune him in this afternoon and he'll be back on and be his old chipper self.
I guess I'll find out.

There isn't a penny's worth of difference between the dems and so-called repubs.There ARE some (I am Conservative Independent) Real Republicans out there though.The dems and repubs should stop bickering with each other and sit down and work out a reasonable,practible plan to get the War over with.That isn't going to happen anytime soon.Shooting and bombing people isn't going to solve anything,it never has before.What to do? I don't know.I am not a Military Strategist.The Sunni's and Kurds and Shiite's will never get along with each other.Oviously,the bush cable doesn't have so much as one iota of one tenth of one percent of a clue of what to do.The dems and so-called repubs should bring in some real old timers Military Strategist people and some real old timers Diplomatic people and work out something.

Nope! I mean 2009!!! The next president takes office in January 2009.

Now, congress and guts. The Socialist Party of the USA [AKA Democrats] will fund, directly or indirectly, Al-Quada NOT to attack us. If we are attacked they will threaten sanctions. If the sanctions threat doesn't work they will debate the existence of Al-Quada at the UN. If that doesn't work, then Al Gore will hug some trees. :-)

PEACE at ANY PRICE is called appeasement. We all know where that led in the 1930s.

The war on terror will run well into the mid 21st century. You better believe it!

After some correspondence with Charles Counselman, W1HIS, I have been made aware of serious short comings in my testing procedure. Charles pointed out that I could not make accurate enough to insure that what I was
measuring was in fact TI and not common mode effect due to micro imbalances
in my equipment.

Upon further thought and reflection, the fact that placing a number of ferrite beads
along coax stops the "ingress" suggests that Charles is correct and that it is
common mode effects I am measuring.

>From some simple tests to check the balance of my BALUNs, I am convinced that
I have errors of at least 15%. Even my trusty R390's balanced input is far from a
"perfect" balance over the 5000KHz to 30MHz frequency range.

Charles Counselman's research into common mode effects and how to reduce
it are a God send to my receiving pursuits.
<www.yccc.org/Articles/W1HIS/CommonModeChokesW1HIS2006Apr06.pdf >
I am grateful for his help in understanding where I went wrong. And I am sorry
for any confussion I may have caused.

For a very inexpensive aid in RFI/EMI reduction, check out
<http://www.hosfelt.com/>,
scroll down to filters and take a look at the CURTIS, Mfg.# -
F1600CA03, 3A filters.
These have been a great help in stomping RFI before it gets started

www.devilfinder.com Scorpions and Snakes along Route 66

Not much you can do about them,except try and stay away from them.It gets cold in desert areas at night and snakes like to find a warm place to get into.Take a snake bite kit with you.Now,if you was traveling by horseback,you wouldn't have to worry too much about snakes.You will probally see some Route 66 reproduction signs for sale in those tourist traps and stores.One of those signs would look good mounted on a wall in your home.

Oh? You think his strategy has been working well up until now with the
Republicans controlling the White House and both houses of Congress? If
you think the war is going well, I'd hate to see what bad is.

Finally the prez has made a statement we can believe. He said "I am a uniter, not a divider.

Thanks to his wonderful performance for the last six years, he HAS become a uniter.

He did indeed -unite- the vast majority of the voters of this great nation to hand him the biggest political ass-whuppin' that's been given out in years.

Heck of a job, Georgie!

Slow Idiot:

I appeal to you. Perhaps you cannot grasp what we are seeing from your words, let me attempt a better explanation to those presented to you in the past:

Have you ever seen someone in a public place who has something on his face? Have you ever made a motion to convey this to him/her? Did you perhaps see a puzzled look upon that persons face? Did you come to realize they just didn't get it? Did you see the revelation of what you were trying to convey to them suddenly hit home in their mind? Didn't you find they were quickly able to correct the condition and make things right and proper? Didn't you find them a bit embarrassed and thankful to you for helping them?

Or, for yet another example, have you ever attempted to explain a new concept to another individual? Did you ever have that experience where the person failed to get the concept, became confused, and interpreted the data you were attempting to convey them into a totally different concept, or were unable to form any concept in their mind at all? Then, perhaps with further explanation and examples offered from you, they finally were able to grasp the true and real concept. Perhaps then you noticed they were a bit embarrassed from taking so long and appearing so dense? They they apologized for taxing your patience and expending your time and thanked you?

Did you ever consider the fact that the above may be occurring, and is indeed my intention, when I am attempting to convey to you the simple fact that, "U R an idiot?"

Do you realize all we wish is for you to recognize this truth and allow that knowledge to correct your present behavior?

Warmest regards,
thanks for your time,
JS

What sort of radio would one need to determine to the tenth of a kHz what frequency a transmitter is on? I imagine one with a graphic display... so you can pinpoint the highest point of the bell curve. Or at least a functional S-meter like on the Kenwood R-1000? (http://www.rigpix.com/kenwood/r1000.htm) It seems that with a standard portable receiver (like my DE1103), it's nearly impossible to pinpoint the frequency of most stations with any more precision than 2-3 kHz, based only on the purity of the sound (the S meter on these is fairly useless.)

What's the least-expensive receiver in this category? I'd love to get deeper into monitoring of utility stations, though perhaps living in a townhouse with nowhere to place an antenna will be a limiting factor.

The elections were a victory for the political center. Twenty-percent of the self-described conservatives who voted in the mid-term elections voted for Democrats. Forty-seven percent of the voters over all were moderates.

James Webb who won a Democratic Senate seat in Virginia is a stand-up military veteran, a conservative who became disaffected with the way the war has been fought in Iraq. He will not be a comfort to the Ned Lamont-Cindy Sheehan crowd on the party's leftwing.

For America this can be a healthy result if it means a coming together on the war against the Islamic jihad. Patriotic Democrats who are critics of the war but defenders of their country will have to differentiate themselves from their anti-American left by shouldering the responsibilities of defense as a governing party.

But will this happen? That remains to be seen.

Typo and/or bad font conversion, I suspect. The letter omega of the opposite case from the one we use (I don't remember if it's upper or lower) looks like a "w", only rounded. It's used in physics for angular velocity.

Hams shouldn't have a problem hearing Omega, but SWL's with table top
receivers and indoor antennas might.

We need to keep pointing out their evil. Democrats throw BS out and
ignorant people believe it.

There's a radio show, the host has a person ask simple political questions
to voters on the street. Most of the people are democrats, it's a Blue
state.

It's sad the number of voters that can't tell you the name of the
vice-president, or other simple questions. Informed voters votes are
getting cancel out by retard votes.

Slow Idiot:

Let me then try but one more example, a bit different perhaps will cause the revelation:

Remember from your history classes, there was a time when most if not all the worlds peoples believed the world was flat and, that if one were to set sail in a ship and venture too far, one would fall off the planet (disk?) But yet, now we look back at these peoples and see the blindness their foolishness and fears caused? We laugh at such childish intellect.

Can you make a connection between the above and your own fear--that maniac, illogical, simplistic, all consuming and quaint fear of life without morse code which holds you in blind bondage? Face your fear and be free man!

Regards,
JS

A president who keeps his fingers crossed behind his back when he signs
legislation he has every intention of ignoring doesn't really need a
'Veto pen', does he? Or have you been living under a rock? Me, I'm one
of those conservatives who thinks the checks and balances intended in the
constitution are still relevant. Apparently, you don't. Quite sad
[though in keeping with most of your other posts if I'm not mistaken].

I'm amazed at how many people I read put down the T2FD after the great
experiences I've had with it. Maybe those who knock it already have a
better low-noise antenna system in place.

I've never lived in a house where I could erect a 200 foot Doty
longwire a good distance from any noise source. My RF Systems T2FD is

probably the next best thing. My first house was in a Philly suburb, close-in neighbors and lots of RFI around but none getting into my receiver. Pulled in a lot of low powered, weak but clean signals from all around the world. I'm still amazed at some of the stations I've heard with it. My second house was much better RFI-wise but reception was every bit as good in my first, proving to me that it was indeed the antenna keeping the man-made noise out.

They are reputed to have low gain compared to other antennas, but the total absence of interfering noise more than makes up for it. Try listening to a radio in a noisy room, you need volume (gain) to compensate for the enviornment. In a quiet room, you can turn the volume (gain) down because its not neccessary, and also much more relaxing and easier to listen to.

Invest in good coax, as there's no point in a low noise antenna without a good shield coax.

My RF Systems antenna is 47 feet long, not too easy to hide but not a monster if you have a good location to run it. One ham operator in my town had a B&W T2FD over 90 feet long and I don't know how many times I walked by his house before I noticed it.

The length determines the optimum frequency range. This one I have is designed for 3.5-35 MHz. I am planning on modifying it to 35 feet long and take off 6 inches in height to make it fit my current yard, as right now I'm really in a tight spot! That'd put the optimum low frequency at 4.75 MHz. They receive below the low frequency of course but performance seems to drop off a bit.

I work with the military. Every US Army officer I have met despises
Rumsfeld. He has refused to listen to them from the very begining and fired
any general who tried to tell him he was wrong.

I disregard everything Dave writes. If he could pay attention, which unfortunately he can't he would recognize that the T2FD is basically a folded dipole with modifications so it will load up on transmit. Those modifications are a waste of time on receive and the reasons given are the rational unlike the advice given by the short attention span guy.

As DxAce found out it will not pick up the signal levels his current fairly long horizontal wires will with or without the T2FD modifications.

Don't buy that cheap Chinese-made Grundig piece-of-crap FR200 - if you read the reviews on eham.net and Amazon, you will see that it has crappy reception and the crank tends to fall off ! Go Grundig !

I wouldn't spend too much on a SW receiver, simply because SWL is on
the decline and DRM is looming of the horizon, which will make your
analog receiver useless. I am in the same dilemma with the possibility
of IBOC being approved for nighttime AM. Actually, I would suggest
getting some magazines and having a good-old-time with yourself in the
tent.

Assuming the station is AM, you can put your radio in sideband and move
the VFO until no tone is heard (zero beat) Then your are tuned to the
center frequency, which can be read directly from the radio.

A Wellbrook loop works fine in a house, though it's expensive.

What Sony does is they drain the batteries down to something like 0.6V,
then cut off the radio operation so that the battery retains the
memory. This puts a strain on rechargable batteries that are not
supposed to be drained below 0.9V.

No, it will not happen because your premiss is incorrect. There is
nothing I have heard since the war in Afghanistan and Iraq that the
Democrats have spoken that I consider "healthy" for the country. The
Demo's have at best sent a mixed messages on the war effort and have
been very negative on legislation for the countries homeland defense.

The people behind the Islamic jihad are cheering the election results.

I use both the in-line module and a repacked hear it speaker and they are simply spectacular performers and I wouldn't do any serious listening without them. they are the best thing since the sync in the satellit 800.

Actually, the idea behind the slope is to make it more
omnidirectional. The ideal slope is something like 30 degrees, but
there's no hard-and-fast rule on this. Set it up as best you can.

>
> How do these antennas perform in relatively noisy environments? I've
> read that they're relatively slow to pick up local noise, but I'd like
> to hear about some people's first hand experiences with them.

I absolutely love mine. Or loved -- it came down and was heavily
damaged in a windstorm, so I've been stuck using an end-fed wire
instead. It seems to be far less sensitive to near-field noise than
the longwire, and yet had nearly the same signal strength from most
directions. The longwire is 400 feet long and has an extensive
grounding and radial network, so it's not exactly a slouch in the
receive department... but the T2FD was a better overall performer. I
just have to rebuild it now.

>
> Are these antennas inevitably eyesores to those philistines who don't
> appreciate the beauty of a good antenna? Is there a way to make them
> less conspicuous?

Mine was quite visible, and I thought of it as an eyesore, but my
neighbors didn't even notice it. It is heavy, visible, and provides a
lot of wind loading with all the spacers it needs. I live in a *very*
high wind area and mine would always come down. I ended up with a
counterweight system to allow it to get blown out of shape by quite a
bit and then return to normal when the wind died down... but that may
not be necessary where you live.

I don't know of a good way to make them less conspicuous unless you
want to play around with using very high strength material with a dark
color for the spacers -- something that doesn't have to be too thick.
Mine used PVC spacers and was ugly, but I live in the boonies and
could get away with it.

Sorry, Telemon, but I disagree with you here. A stopped clock is
right twice a day, and so it is with Dave here.

Yes, the resistor is to avoid standing waves and turn it into a more
travelling wave antenna, much like such terrible receive antennas like
the Beverage and the Rhombic. (*sarcasm*)

My personal experience with wires and a T2FD is that the T2FD was
overall the better antenna with the wires having only occasional
advantages and some frequencies AND directions. The wires, BTW, have
extensive ground networks and about 20 ground radials.

For those not familiar with this antenna, this page is a good
jumping-off point for information (be sure to follow some of the
related links):

http://www.hard-core-dx.com/nordicdx/antenna/wire/t2fd.html

The late Joe Carr was an unabashed fan of this antenna, and he
certainly was a respected antenna authority for receive antennas with
a number of books under his belt, at least one of which was a
technically oriented book.

Regards,

Oh what a GREAT GREAT idea !!! And I'm so sorry I don't have much
competence to do it either.
Prerequisites should be, IMHO :
- no "automatic" inscription posssible (ie you have to go through a
moderator before you can post)
- and some degree of moderation possible in order to eradicate the
commercial trash and useless political humdrum.
I DO resent all the bastards who will use just ANY chance they get, be
it on a site devoted to oriental cooking or goldfish breeding, to
inflict their monomaniac shit on innocent people's heads.

There will be no impeachment or any other hand slapping. When will you wake up and realize there is "not a dime's worth of difference between the two parties". The same jew bankers control them all, and in most cases they don't even get into office unless they are compromised. Took me many years to wake up, you will one day.

Some problems with your suggestion:

1) There isn't enough on-topic discussion to make a new newsgroup viable.

2) Politics is part and parcel of the SWL experience.

3) Some of the most knowledgeable SWL's in this forum, and the ones that have the most to contribute, are also some of the biggest wasters of space/bandwidth.

4) I seriously doubt anyone wants to take the time to moderate a new newsgroup. It takes a lot of work and attention to detail.

According to info on one of the websites, the DSP technology is the same in all the products. It seems that those that like them are able to find a setting (seems to be 4, 5, or 6 of the 1-8 available) and then just leave it there pretty much full time. BHI makes all the GAP DSP units.

A link to the GAP DSP stuff:
http://www.gapantenna.com/hearit.htm

Universal Radio carries their speaker and the in line module, but I don't find the new NASWA reviewed unit there yet.

You're in "Da Nile" ...
you know that river that Bushy thinks is in Libya?

I am SOOO happy my government is no longer in the hands of Troglodites, Neanderthals and pedophiles. Stay the course, indeed: straight to hell.

Long Live Good Government

Republicans can lick their wounds and enjoy all the money they've collected from Abramoff and friends. Head on down to Cancun. They can continue to enjoy their Spa Resort lifestyle.

In the meantime, we regular folks have a lot of work to do to restore government and end Bush's Folly in Iraq.

Don't forget to look at John Bryant's pdf showing another way to build
a
an effective common mode choke for receiving applications. Bryant's
torroid will over heat with as little as 10W on Tx!

<http://www.dxing.info/equipment/coax_leadin_bryant.pdf>

I have found that the most effective way to reduce your QTH noise level
is:
Step 1: Use a portable SW receiver, I use a DX398, with a simple loop
to check every circuit, and every device in your home and outbuildings.
Be certain to check everything. Doorbell, Smoke alarm, water heater,
PIR lights, coldcathode florescents lamps, telephone devices, TVs, VCRs
DVD/CD players, audio cassette decks(I had a pioneer that had a nasty
spur on ~5.1 @ S9), battery chargers, well you get the idea. Check
every
thing. A lot of the RF noise, in every case I have worked with, comes
from
within or very close to your home.
Step2:After finding and logging the noise, start fighting it. The
Curtis RFI
filters I mentioned are easily made into "things" to go between the AC
mains
and the device. They use PC style IEC power cord for inputs, so it will
be
useful to gather at least one per filter. For those devices with it
will take two
cords per filter, one for the AC in and another that you simply cut the
male
end off and solder to the filter's outputs. Other devices will need the
IEC input
cord and either have the device hard wired to the filter output, or the
use of a
suitable female connector.

I found it helpful to add a 0.1uF 1KV disk cap across the filter's output. I
used liquid tape to unsulate the filters hot end, and in most cases I used
large diameter heatshrink to protect the whole filter assembly. Regular
electrical tape would work, and the really industrious can build the filters
into mini-boxes. For our HiFi/"Home Theatre" center I built my own fitlered
power "strip" with 10 RFI filters in one metal box with 1 heavy AC input
cord that I fan out to each filter input. I use some 1" square females because
I had a chasies punch. I got fancy and added some relays to allow the power
to be remoted. Most modern devices don'e have real power switches as something
is always left alive, so by really turning everything off I reduce the off state noise
and as important, reduce the chances of AC line spikes damaging something.

For Wall Wart, I try to pick RF quite units to begin with, then add ferrite on the
output, and in extreme cases I crack the case open and bypass the diodes
with 1000pF/0.0001uF caps. As Telemon pointed out, it would be more effective
to design and build a snubber for that specific circuit, but I have found the 1000pF
to almost always work very well.

Be sure to check the phone line at the NID/demarcation box. A friend had
nasty RFI coming down the phone line. With more DLS being added all the
time, I check mine once a week or anytime I hear a new constant RFI source.
Ferrite will keep it out of your home.

Use a real RF ground and do not rely on the house hold electrical ground.
Use good quality coax.
If you are using a "wire" antenna, be certain a matching transformer.
If you are using a non-dipole acitve antenna you will almost certainly have
to use a lot more ferrite then you first would think. Active dipoles are
much more imune, but still need some common mode filtering.

!!ALL of the active non-dipoles that I have played with require a very good
ground at the base of the antenna.!! Good means at least a 4' ground

rod into moist soil. 8' is better, but awkward to move. I plan on using a 4' until I find the quitest spot then switch to an 8' rod.

Sorry for the length of this, but I thought you mind find it useful.

Terry

First the republicans went into an orgy of finger pointing to find
someone other than themselves to blame for their trouncing at the
polls. Now they engage in historical revisionism to shift the blame
for the senseless invasion of Iraq and to a lesser extent Afghanistan.
George Bush can take credit for creating many more potential Osama's
with this botched up invasion.

That's what I meant by Devoldere/Bryant, but I wasn't clear enough...
Devoldere's book (ARRL Low Band DXing) is where Bryant & Nelson got the
info from originally.

Not too long for the info given! I am working on these exact things
courtesy of information passed to me by your friend Will. You didn't
know you were helping somebody in Syracuse, NY, but you have been.
Will has been kind enough to send me a lot of details on how you showed
him your "noise audit" procedure and ways to kill the noise. I just
received 20 of the Curtis filters from Hosfelt.
You helped Will and a bunch has "trickeled down" to me. Thank you very
much.

Right on, sistah. AGC is in disarray. What it needs is a strong forceful leader with just the right mixture of charisma and ruthlessness. One who can strike the right balance between the iron fist and the velvet glove. At present such leadership is, as you so brilliantly point out, sorely missing. But, take heart, there is hope. As we all know, Dear Leader Kim Jong-il, the son of the Great Leader Kim Il-sung, is an avid Hollywood fan. So I am sure with some gentle persuasion he can be convinced to provide that strong leadership that AGC desperately needs. We need to set up a mission to travel to Pyongyang and make the proposal to him. And I think you are just the person to head up that mission. Your many world travels and your great achievements and titles prove that you are the right person for the job. Just put together a delegation and let Gregory Morrow know the details so he can make the travel arrangements. He has contacts at Air Koryo that can get you a good deal.

All Hail our Dear Leader!

1147. WANTED: LOWE HF-150 - definition remote protocol

"fifty-cents"

Communist Chinese online commentators recruited by various Communist state agencies are responsible for guiding Internet users toward the authority-endorsed opinions on important issues. They are referred to as the "Internet political workers," and are paid half a yuan (US$0.08) per message they write. Internet users refer to these commentators-in-disguise as "fifty-cents."

>
>

That's the crux of the matter! It really is a pain just running the
simplest of forums. The best idea would be to run a private news
server such as that at news.grc.com but as you say someone has to
have the time, ability and keenness to do it.

In the meantime the kill file rules :)

Glad to have helped. As people have helped me over the years,
I try to pass my bits of useful knowledge on to those who can
use them.

An often overlooked source of ferrite material is computer "stuff".

Keyboards, and mouses often have small ferrite beads inside.

VGA monitors often have big ferrite beads on the cable at the HD15
and right inside the monitor. They also often have other ferrite beads
inside and the better ones they have pretty good single stage RFI
filters on the power lead.

The switch mode power supplies have at least one, and often several,
ferrite toroids.

Even junk like VCRs and DVD players often have ferrite on the AC mains
and the PS unit often has ferrite cores.

Dead light dimmers are also good sources of ferrite torroids.

I have made it a point to scavenge every piece of ferrite I can lay my
hands on.

As W1HIS points out transmitting requires the selection of the correct
ferrite. But for receiving we want extra lossy ferrite. The lossier the
better.
Lossy ferrite wastes power by absorbing it and getting hot. And if your
receive ferrite gets hot you are too darn close to a MW power house!

Even iron dust cores do a suitable job of suppressing common mode
on coax, power lines and telephone lines.

And don't be saddened when you find the noise reduction process is
multi step. The first pass will get the big RFI sources, each succesive
pass will reduce the next level of RFI.

Another trick is to find some GE MOVs and disassemble them and add a 1000pF cap across the hot to neutral and maybe hot to ground. And to add a 1000pF across the light switches. This last step will stop, or greatly
reduce the "pop" as lights are turned on or off. On unexpected advantage
of adding MOVs across every circuit was the reduction of damage from nearby lightning strikes.

You might find it usefull to make a sketch of your home showing every outlet, switch and light fixture. Number them. Don't forget the smoke alarm and door bell. Then number your circuit breakers and make a chart showing which outlet is controlled by which breaker. Very handy when non RFI troubles pop up.

Terry

And for things like PC's,that already use the IEC sockets,you could
(should!) replace them with the type that have the built in filters.

PC's are horribly noisy beasts. And all the SMPS's used everywhere don't
help either..anyone actually use a scope to look at their 120V waveform
lately? I'll bet it looks nasty.
Beware of those nasty light-dimmers too..Those suckers can spew noise
for blocks,and spread noise through your entire house's wiring!

(I once had a "glitch" in a signal on my O'scope,couldn't figure it
out..it was noise from a light dimmer in the bedroom,on the other end of
the house,on a different circuit even..It's supposedly a "low EMI/RFI"
dimmer also. PFfft.)

Ferrite,Filters,and bypass caps for everyone!

And those nasty "Phantom Loads" ie: something that's powered on,even
though the button on the front says "off"..
Nowadays "Standby" has replaced "off".
And put the "wall warts" on a switched-strip too,turn them off when you
don't need them.Save a bit on the power bill too while you're at it.

>

Another trick I've used on the phone line is to earth-ground all the
unused conductors in the cable.
They wired our house with Cat-5,and we had 2 phone lines.
So we had 2 pairs used,and 2 pairs unused..I grounded the unused pairs
at the junction box outside the house,and that killed a bunch of noise
and crosstalk between the lines. The 56K modem would connect at faster
speeds also.

>

Speaking of grounds,go around your house with a wrench and
screwdriver,tighten the ground wire connections at the service
box,ground rod,etc. Those connections can become corroded,and noisy.

If there are any light-poles around with transformers on them,go tighten
the ground connections on those up too. Those can spew noise for
blocks,or even miles.
(or have the utility come do it,but that might take a month.)

I'd check with people on repeaters you can hear and ask them. Someone
should know unless they're also clueless no-coders. If all else fails,
you can take your HTX 202 back to Radio Shack and exchange blank stares
with the clerk.

Yes there is a difference between the parties. Here's what you get with
the democrats:

Defeat in Iraq,
Higher taxes,
Much Much larger government,
Renewed attacks on morality, religion, free speech and gun rights,
Higher inflation and unemployment,
terrorist attacks on our own shores again,
a loss in private property rights,
thousands of childen murdered by being sucked from the womb with a
vacuum....

Danny,
I can moderate it, but for every on topic radio post there would have to
be a support Bush defend America post too. Ain't no point in talking about
radio's if you're dying after the democrats and French let terrorists try
to kill us.

And you'll all have to learn morse code too.

Actually Bush, Cheney, Rumsfeld, Powell and Rice can take equal shares
of the blame for spreading the lies to justify the invasion. A joint
exit would be just fine.

I have high regard for Joe Carr and if anyone has a need they should buy
one of his books.

I'm not surprised your experience is good with a T2FD, it's a good design.

There is a purpose behind the T2FD design and it is for transmit and receive. For people wanting to use it only for receive the additions to a basic folded dipole design so it will load well on transmit over a range of frequencies are not needed and will not help on receive.

For receive only you are much better off using a BALUN of the right transformation depending on the basic shape of the folded dipole you construct.

Yes, thanks FM.

What I can't understand is why veterans don't automatically have veteran's day off. Make sense? I told my boss I thought we should get the day off. When I am in charge No veteran will have to work on veteran's day.

My TTFD works well only above 7mc because of the size. It isn't as quiet as I would like, or thought it would be, because it is in the attic. I mostly use my 160m dipole for swl. I am sticking up a 200' long wire next week at the back corner of my property across the river. I'll probably stick a 2m 1/4 wave in the attic and scrap the TTFD. It was a worthwhile experiment and would probably do very well if it were bigger, tilted more, and away from the house.

Wow. Interesting and strange.
A company I worked for many years ago was
doing ion implantation of semiconductors.
I didn't realize that so much HF power was
involved.

The strange part is that that info is hosted by
a company that makes shipping cases. ?

> > effect the antenna's radiation pattern, but will how? Does it cause the
> > antenna to become highly directional as the angle increases?

- Actually, the idea behind the slope is to make it more
omnidirectional.

That is one of the the reasons often cited for Sloping the Wire
Antenna Element : The Inverted "V" being another example.

- The ideal slope is something like 30 degrees,
- but there's no hard-and-fast rule on this.

Yes 30 Degrees works well for most Sloping Receiving Antennas.
Horizontal (Flat) Wire = 100% Horizontal Dimension Area of Radiation.
Vertcal (Upright) Wire = 100% Vertical Dimension Area of Radiation.
45 Degree Sloping Wire = 50% Horizontal and 50% Vertical
Dimension Area of Radiation.
30 Degree Sloping Wire = 87% Horizontal Dimension and
50% Vertical Dimension Areas of Radiation.
- - - Roughly speaking.
The 30 Degree Sloping Wire Antenna Element to some
degree can be though of as the same space equalent as
an Inverted "L" Antenna which would make up the other
Two Sides of a Triangle created by the Sloping Side.
* 30 Ft Sloper Antenna would take up the same space as
a 15 Ft Vertical by 26 Ft Horizontal Inverted "L" Antenna.
Note - This Inverted "L" would be 41 Ft long (+11 Ft) and
have 37% more Wire-in-the-Air.
* 52 Ft Sloper Antenna would take up the same space as
a 26 Ft Vertical by 45 Ft Horizontal Inverted "L" Antenna
Note - This Inverted "L" would be 71 Ft long (+19 Ft) and
have 37% more Wire-in-the-Air.

- - - For some it simply comes down to the fact that the
Sloping Wire Antenna may be eaiser to Rig then the
Inverted "L" Wire Antenna.

Radio Shack - "You've got questions , we've got blank stares". It
seems, as if there is always one idiot clerk and one pushy asshole -
our store, we have this red-headed asshole, who likes to talk-down,
and sell the most expensive of what you want. I am so glad, that the HD
Radio Cartel chose this loser retail chain, as its Big HD Radio Rollout
!

Thanks again!

In your discussions with Charles Counselman, has he added anything yet
to his document? He had some blank sections that were to come later,
just wondering if he mentioned anything.

Usually the no-code techs have a better idea as to how echolink and IRLP
work than most of the old-timers, because it is the only way that they can
access "long distance" radio. Most of the old-timers don't consider it to
be "real" radio and as such, are often stuck in their ways and slow to
accept the new form of communication on the service.
It is similar to many of the other forms that were incorporated into amateur
radio and were slow to be accepted, such as SSB, SSTV, even ATV. I don't
think any of these are any less ham radio than CW is ham radio.

We covered many topics, but it would be hard to extract anything to
post here.
He does intend to post info on his search antenna. A simple 20 turn
loop wound
on a pill bottle will suffice to get you started.

Is your Email valid? I will ask Charles if it is OK to forward you his
B-field noise
sensing diagram.

Depending on how serious, or demented, you are, you might benifit from
rereading
my prior posts on RF hunts. The 20 turn loop is good for finding noisy
devices. A
smaller loop made from a salvaged 100uH axial ferrite inductor is great
for sniffing
around inside a device to find the exact noise source. I built mine in
a old
Sharpie dry marker case. While I added BNC females connectors to all my
probes
because I was in the process of trading for a spectrum anylzer and
wanted to
be able to use my probes with that test gear, a cheaper and more
effective option for
most people would be to use ~3' of RG174 terminated in the coorect
connector for
your noise sniffing receiver. I choose to use a DX398 because I have
one and becuase
it it reasonbly well shielded and does a good job as a sniffer.

Maybe 99% of devices radiate RFI over a very wide frequency range. Digital noise
tends to be very broadband. Every so often you will find a device that produces a
strong signal on a specific frequency and does not radiate general RFI.

One common frequency is 3.58MHz, US color refference burst. I had one early Apex
DVD that I never could quiten down enough to live with. I suppose I ought to dig through
my notes and list the more common "CPU' frequencies. As NTSC goes away, and
TV horizontal moves away from 15.73426KHz, (from a grass valley "NTSC Studio
Timing:") the harmonics that we are used to at ~15.73KHz increments will vanish.
ATSC can be a can of snakes. (http://www.atsc.org/standards.html) Butfrom what I
have seen so far ATSC will bigger VHF/UHF RFI issue.

Plasma big screens have their own nasty noise signature. LCDs are cold cathode
florescent illumintated and the drive oscillators tend to be in the 35~50KHz range
and are fairly well shielded and (most) don't radiate too badly.Perhaps the best thing
for modern SWLs is the move from over the air TV to cable and satellite. Older tube
sets had very poor internal shielding and radiated sweep and color burst back out
the antenna and that 300 ohm ribbon lead made a pretty effective antenna.

Good hunting

Terry

I am both serious and demented, and very proud of it ;-)
Actually, because Will had referred so much to what you had taught him, I saved that info plus I searched this group for posts on noise, grounding, etc., so you can assume that if you posted it here I have probably read it. I have a Word document that started out in outline form to collect radio info that I cut and paste info from the web and messages into. It is getting rather large, around 60 pages or so, but very helpful. I find that info that was confusing two mos ago is now clear as I read it again after further learning. I need to figure out how to expand and collapse sections in Word pretty soon!

I am a retired/disabled engineer with a good mind limited a bit by various physical things, so physical work has to be hired out or proceeds slowly.

Radio is fascinating to me. I was interseted as a kid, and at intervals later, but family and too much work kept me from having much time. Now I have it. Although an electrical engineer, I spent my career at a steel mill, on things like 15 KV and 480V power distribution, large DC motors and generators, relay logic, and later solid state drives and computer stuff, but really not at the component level. Later years were mostly managing engineering where I spent more time on planning and budgets than on technical things. Learning about this "stuff" is a refreshing change.

I believe anything Mr. Counselman has written would be interesting...

I'm not so sure I'm convinced by that, simply because of the amount of
material I've read on the T2FD. Yes, it was designed as a transmit
antenna, and yes, the resistor is vital to that role, but like in a
rhombic or Beverage, it still plays an important role in reception.

>
> For receive only you are much better off using a BALUN of the right

Unfortunately, I've no experience modelling the antenna, or I would do
so to see if that's correct. Do you have a model to back up this
assertion? I'm interested in seeing this result.

1228. Floating museum INTREPID still serves today

Date: 2006-11-11 18:01:49 UTC
From: radioman390 <radioman390@cs.com>
Message-ID: <1163268109.419861.50620@m73g2000cwd.googlegroups.com>
Source record: 97268

The A/C carrier Intrepid could not be towed from its berth in NYC
because of mud fouling the props. The Navy will step in and get it to
deeper water so it can go into drydock for a 2-year refurb.

In one of the stories was this:
It now serves as a memorial to the armed services, a tourist attraction
that draws hundreds of thousands of people a year. It is also equipped
to become an emergency operation center for city and federal
authorities. The FBI used it as an operation center after the 2001
terrorist attacks."

Nice to know its still serving.

Cebic has some interesting feedpoint info on the terminated folded
dipole at http://www.cebik.com/gup/groundup.html

Also, I'm guessing the signal loss he mentions might be why some find
the antenna to be "quiet."

Source record: 97273

i cant vouch for the T2FD at shortwave frequencies but i built one cut for vhf and it was a rocket! it was red hot when compared to all of my other scanner antennas, including a fairly expensive name brand ground plane antenna (whose name escapes me at this moment). as far as one persons statement goes that for receive a simple unterminated dipole is the same or superior to the terminated one, if that is true then it would simplify the antenna considerably. it does seem logical that the terminating resistor would attenuate or reduce at least some received signal. however at rf frequencies some strange factors arise that are unknown to me and logic doesnt always serve well when it comes to antennas. for instance as a teenager i had one of those antique all metal box springs for my bed. it didnt calculate out that the springs would load up at all but they were the best hf receive antenna that i have ever had in my life. the bottom line is this, T2FD is a GREAT antenna! maybe plain TFD is as good? TRY ONE! (tilt is for omni pattern, sometimes this is good, sometimes not so good!) you will find circumstances that arise where the one antenna receives when the other hears nothing. there is no perfect antenna, several variations to choose from and compare between is the swl ideal. BUILD THAT DAMN ANTENNA! and the others too! and most of all, post your results!

I went through the same problem a while back for PWBR 2006 on the other side of the state. I found that the Barnes and Nobles I called didn't even carry it(!), but Borders had it on the shelf. If they haven't gotten copies of 2007 in yet, you might be stuck mailordering it.

I have two listening stations, one I use the in line module and I vary the setting slightly on occasion but mostly on 4. and I keep in in most of the time even on music
the other station has a hear it speaker that I rebuilt into a project box with a better speaker and it is more versatile and easy to use however I had to pick a setting and chose 5, however I can easily switch it in and out of circuit but usually keep it in.
these items are essential to my listening because of noise in my area and these are the only things that make a difference

Here is a search result ar a St. Louis bookstore website. The search
engine looks like it is run by some wholesaler and customized for
various non-chain bookstores to permit them to compete with the big
boys.I don't know if they will actually have it or just be able to
order it.

> reasonably electrically quiet?
>
> Thanks again, Bob

Even with wall warts that appear to be identical, the RFI varies a
great deal.
I go to the local good will store once every couple of weeks with my
trusty
DX398 and check out their constantly changing stock for quite ones.
Stay away from switch mode wall warts. They are very light weight and
are RFI demons.

I try to keep a selection on hand of the more common voltages and try
to
limit my purchases to those that are fastened with screws.

At home I have modifed nearly everything in the radio room to run from
+12V so I
only have to worry about the one big supply. It also makes operation
during power
outages easier as I have several GellCells on constant float ready to
take over
when the grid goes down.

I will try to assemble/edit down a list of usefull links and email, or
get Will to
email, them to you. The r2000swl/swler accounts are dead. Too much hate

filled spam.

What type receiver are you using?
What type antenna(s)....
What is your special interest...

It is hard to overestimate how much a good ground can improve every
situation.
"Good" is difficult to define, but in my mind it is much more then a
single
8' ground rod or a cold water pipe. A triad of three 8' ground rods
arranged in
a equalateral 12" triangle, interconnected by #8 solid copper wire is a
good

start. An alternative can be made with one 8' rod, and ~20' of soft copper
tubing buried at lease a foot. The use of balanced antennas makes the
ground less critical. I am not a big fan of loops, but I have found that active,
broadband dipoles, in the right places can reduce the need of a good ground
nearly completly. And while I don't care much for loops, many first class
DXers swear by them. Good, well balanced loops don't require much in the
way of a ground.

r2000swler@hotmail.com wrote:
> What type receiver are you using?
I have an Icom R75 and an Eton E1 and E5. Going to use the E5 for "sniffing". I had a Drake R8 I used years ago when I was recovering from hip replacement surgery, but I sold that one time when time & $ were scarce. If I get the noise under control, I may try to scheme up a way to get an R8B, but don't know for sure. I liked the R8 a lot except for carousel controls, crappy feet (broke one the first week I had it, but epoxy repair lasted as long as I had it) and underwhelming sync derector. Hence the R8B interest. So many toys, so little time and $!

> What type antenna(s)....
Am just starting on that. Have an indoor loop that is useless with noise, so I'm not doing a lot of listening, just learning. We recently moved into a "condo type" single level home with a homeowners association and antenna restrictions. We are still unpacking the basement and I have yet to find my soldering iron and some other stuff. Just getting shelves set up so boxes can be unpacked. I figure active antennas are the only real option, and again that's why I have to get the noise out.

I have looked at RF Systems, LF Engineering, DX Engineering, Wellbrook, Dressler....

I've narrowed it down some. Ordered a PA0RDT miniwhip, cause I can hide it anywhere and if I choke the heck out of it maybe it will work some. Will order ferrite toroids and LMR-100 (better shielded RG 174) maybe this week. I've looked real hard at the AMRAD and at Dallas Lankford's latest writings, but I'm no builder. yet, anyway :-). I found a guy that builds the AMRAD unit. He has improved the design a bit like clamping the heat sink to the Crystalonics unit. We have to talk more, but I think I'll have him make me something. I've asked him about Dallas' designs, but he has been travelling and it will be a week or so to get it talked out I guess.

> What is your special interest...

AM, tropical bands, and general shortwave.

> It is hard to overestimate how much a good ground can improve every
> situation.

I will hire someone to put a couple of 8 ft. ground rods near our deck, and another one near our service entrance. The service panel is on one side of the basement, and it connects to the incoming water line which

of course is at the opposite side of the basement. I thought I'd have two rods at the deck connected by copper line similar to what Will did and carry it (copper line) around the side to the ground rod near the service entrance and a #2 or maybe 00 into the basement bonded to the ground wire at the panel. That should improve the service ground too. If we just do a slit like cable company does, I should get no heat from the association, but the line probably won't be but a few inches deep. I'm doing some work for the association, so hopefully have some good will...

> I am not a big fan of loops, but I have found

Noted.

> way of a ground.

I think active verticals or dipoles are more acceptable (mounted on or near deck railing) than a loop visually. I doubt I could finese a loop past the association. In a pinch, the AMRADs could mount 45 deg on railing and be small flag poles.

This has gotten long, but thanks so much for your time.

I got this radio last Monday and, contrary to many of the posts, I have
really enjoyed the radio. I have gotten really good reception on the
MW. I live in a very rural area and in a metal building and still
pick up solid reception from WOAI which is about 400 miles south of me.
Maybe I got the "good one".

All I can say is that I am happy with this model at least for the time
being.

I guessed the 12-150 was a repackaged Grundig S350, SRIII, or the original high-performance radio that RS used to carry. I had that piece-of-crap S350, now returned to RS, and weighing in at just one pound, as the 12-150, I should have known better (but, it had a pretty face). Really sick of all the hype and cheap Chinese-made receivers. I have a $25 RS PLL AM/FM 12-898 (now discontined) that performs as well as my S350 did. If the 12-150 had a handle similar to the S350, it too would reek of cheap imitation leather ! Good decision to take that cheap piece of shit back to RS !

Kurt Vonnegut said that Armistice Day was sacred, Veterans Day not.

On the eleventh hour (CET) of the eleventh day of the eleventh month farm boys from Barvaria stopped killing plumber's apprentices from Yorkshire and the war to end all wars was over.

In Britain and Canada it is Remembrance Day and they wear poppies in their lapels to remember what happened in Flanders field. (by the way there is a Flanders Field VFW post near Shea stadium.)

In Oceania they celebrate ANZAC Day in late April because First Lord of the Admiralty Winston Churchill sent their sons to slaughter on the beaches of Gallipoli and Australia and New Zealand found their nationhood.

(Isn't it curious that FDR and Churchill both headed the Navy in WW I and both headed the government in WW II?)

Heard at the Shack on the Bayou in southeast Texas:

0140, November 12 UTC
350 kHz
"GDT"

The keying sounds kind of sloppy, but I'm pretty sure it's "GDT".

It's not in any reference I can find.

Has anybody heard it?

Thank you,
Mike Knowlton

So I think I did something wrong, I check your email and copy
RadioShack.com Order Center/helpdesk
from your email, add www. and of course, there is no such page.
Ok, so I try just www.radioshack.com and look for Order Center/helpdesk
I don't find Order Center/helpdesk anywhere on the page.
After much searching I gave up.
I located an 800 # and called it, After pushing all the right buttons, hey

guess what? I get a busy signal!
The next call, I'm very quiet, I don't say anything to all the prompts,
finally a live person answered and I get switched to someone that
helps me. You don't carry the repair part I needed, but I did get an answer,
it did take two emails and about 45 minutes, but I got an answer.

Your Valued Customer,
Mike Knowlton

For bang for the buck the North Country Active antenna works pretty
well.
According to Yodar from RHFs Yahoo antenna group they will assemble
it for you. It is small enough to hide and will work much better then
the
PA0RDT. In my opinnion, based on the tests that I have made, the
PA0RDT
simply doesn't have enough antenna to overcomm the internal noise in
the
active electronics. The North country would be my first choice if I
couldn't
get a Lankford, or it's near clone the AMRAD. The Real Deal LankFord is
significantly better then the AmRad. I have both. The North Country,
when
2 are connected for and active dipole similar to Dallas' summing is

almost
a great antenna. Biggest weakness comes from MW stations too close
bleeding
through. CBers close by can be a problem also.

The PA0RDT might work well enough for serious consideration with a
longer
antenna element.(and serious ferrite for common mode control and a very
good
ground) And for those who have used a PA0RDT and love it great. But I
base
my opinions on what I experience. The Wellbrook is highly praised and I
was
extremly unimpressed with it's performance. Right or Wrong I call it
like I see it.

One variation I am going to try and build of Dallas' active dipole is
to build it
like a VHF coaxial dipole. The lower element will be an outer sleeve
over a
center support member. It would be very easy to hide in plain sight,
and with
some care in routing the coax, you might get away with calling it a
bird feeder.
Hard to put into words, but I ought to be very doable.

The R8B is a SWEET receiver. I got in trade for some special advice
that saved
a former SWL a bundle of money on his custom designed home theater
system
where he was going to get ripped off for several K of wasted money for
a sloppy
design with inferrior equipement. 95% of the time anything I hear on
the R8B I
can hear on my R2000. But that other 5% of the time is heaven!

Terry

Thanks, I'm going to be looking at it soon.

> Also, I'm guessing the signal loss he mentions might be why some find
> the antenna to be "quiet."

When I compare it against my 400 foot wire with a ground, matching network, radials, etc., I find that the S/N ratio is far better on the T2FD. In fact, usually, the signal level is indistinguishable on receivers with accurate S meters.

There are exceptions, of course -- the T2FD doesn't do as well below 2 MHz, but then it wasn't designed to. Above there, the T2FD is the better all 'round player. If I had to have only one of my two antennas, there simply would be no competition.

I said I don't want retards following up to my posts. Can't you read
either? What part of "Retards don't follow-up" don't you understand?

Sheeeesh

/
That is obviously self-explanatory. Apparently Mark doesn't consider himself
to be a "retard", despite popular opinion.

True, but unfortunately, what you see above isn't "ID theft", but
froggery. Froggery is fully legal. Also, that's more than likely Wabbit.

Source record: 97436

The ABC domestic shortwave service can be heard from about 1000-UTC to local sunrise (USA-east) on 2310 and 2325. Signal strength is weak but readable. It may require a low RF noise environment to hear them. These frequencies are from Alice Springs and Tenant Creek (Australia) respectively. They are the first two entries in the 2007 'Passport' Blue Pages. The programing is not the same as the overseas service of Radio Australia.

F Y I - The eBay Seller OrlandoComputer would seem . . .
to have Two Almost 'new' Drake R8Bs on eBay ?

Refurb Drake R8B Comm Receiver Factory Serviced w/ warr
Shipped from Drake, serviced and calibrated 90 day warr

eBay Item Number : 230050529802

eBay Item Number : 230050540561

The Seller OrlandoComputer claims :
* Here is how this works.
* I've made arrangements with Bill Frost, the Service Manager at Drake.

* Once your specific unit is paid for, I'll ship it to Drake,
* where they will perform the factory service and calibration
on your receiver AT MY EXPENSE.
* Once done, the unit will be shipped to you straight from Drake,
along with your statement of calibration ,
* and a 90 DAY FACTORY WARRANTY.
* Please note, these units work perfectly as they are.
* I'm spending thousands extra for YOUR peace of mind.
(and that sweet 90 day warranty!)
* The original plastic on the LED lenses were all replaced
with a new factory replacement part.

Question : Are all these claims believable ?
- - - Or simply to good to be true ?

such-a-deal - maybe - and then again may be not ~ RHF

+++++++
Yet more evidence that CW is a nostalgia mode, not used in current
state of the art communications.

I think you are right about low RF noise environment. I can easily
hear the carrier squeal from these two on SSB, but my noise level on
those frequencies is near top rung, and that, as they say, is that.

I'm getting a woman's voice in Spanish at around 7681 khz

07:59 UTC (GMT)

Same repetition of numbers.

mike

Seems like high price to me, but it could be because of the refurbishing costs at Drake. Is it the Real Deal? The truth of the matter could be settled easily enough by emailing Drake's Bill Frost.

The lack of a red velvet curtain immediately convinces me of the legitimacy. That and the fact that the words 'ham estate sale' and 'cleansed' never appear anywhere in the script are another good sign.

We already DO have an 'America hater' in the White House, and his name
is 'Shrub'.

He already HAS nearly destroyed the country and the Constitution. The
Democrats are the country's only hope for a return to sanity, and the
vast majority of the nation's voters understood that.

Some needs to point out the use of an invalid TLD means he can't
complain even is someone reproduced his "handle". You see technically
he has no right to use *.aprs.

So anyone can use stupidwankerMark@kb9rqz.aprs and there is Zero he
can do about it... Because *.aprs doesn't really exist.

This will do little to dissuade Mork from making his accusations.
After all, a technicality here and there means little to Mark, especially
when he is confronted with his errors.
Mark is omniscient, he knows all, sees all. At least from his Usenet roost
in Michigan..

One has to question a guy like Mork, a person whose virtual life revolves
around Usenet. Who else do you know who has made Usenet his virtual Home?
Who else but Mark posts 100, 200 or more comments per any given day?
Mark Morgan lacks a Home Life, which is painfully obvious to us Usenet
attendees. The guy "ain't all there."

See Bob Officer's reply to me for further enlightenment. It was not "forgery", it was *froggery*, so-named because you are not using a replyable address, and he is clearly not you. Since you are obviously not being a KKKathy Mosesian-esque boaster, WRT your sex life, the homo/biphobes are waxing froth over your continued presence in their midst *as an out bisexual*, and nothing more. Your GK win is incidental to that. However, your own objections to the x-poasting into your rec.radio.* froups are equally as k00ky as their objections to you. AUK doesn't do gaybashing, we(tinw) poke k00ks. Any alleged "kookologist" who uses gay lames outside of poking k00ks runs the risk of being nominated for a Busted Urinal, as Michael Baldwin Bruce was, a year or so ago.

"Immorality: The morality of those who are having a better time." -- H. L. Mencken

"Consider that language a moment. 'Purposefully and materially supported hostilities against the United States' is in the eye of the beholder, and this administration has proven itself to be astonishingly impatient with criticism of any kind. The broad powers given to Bush by this legislation allow him to capture, indefinitely detain, and refuse a hearing to any American citizen who speaks out against Iraq or any other part of the so-called 'War on Terror.'

"If you write a letter to the editor attacking Bush, you could be deemed as purposefully and materially supporting hostilities against the United States. If you organize or join a public demonstration against Iraq, or against the administration, the same designation could befall you. One dark-comedy aspect of the legislation is that senators or House members who publicly disagree with Bush, criticize him, or organize investigations into his dealings could be placed under the same designation. In effect, Congress just gave Bush the power to lock them up." -- William Rivers Pitt

"It has become clear in recent months that a critical mass of the American people have seen through the lies of the Bush administration; with the president's polls at an historic low, growing resistance to the war Iraq, and the Democrats likely to take back the Congress in mid-term elections, the Bush administration is on the ropes. And so it is particularly worrying that President Bush has seen fit, at this juncture to, in effect, declare himself dictator." -- Frank Morales

I think it's OKT at Yoakum, Tx.
Morse code for GDT would be --. -.. -...;
The last character in the sound file you posted is just a '-' .

See: http://www.airnav.com/navaids/ and search for 350.

Grrrrr,

Meant to say the first character sounded like ---
in the sound file. Of course the last one is a - for T.
That wouldn't help to differentiate between GDT
and OKT.

Regards,
John

I'd wonder how it would compare to an ordinary non-folded,
non-terminated dipole, although that might not be a valid comparison,
since a dipole is typically designed for a single frequency. Oh,
well...

We might finally be able to breathe? Lock yourself in your garage for a short while with you car idling, you won't come out. Picture yourself streaming down the highway where uncounted cars have just preceded you, and are just preceding you, do you see the virtual "river" of toxin you are traveling in; do you see it drifting towards your neighborhood?

I do NOT wish to stop driving, I only wish to stop dying to do so... without doubt we are in Iraq because of oil, no matter it reflects a type of insanity to be there?

Still, now we ARE there...

JS

1332. Longwave stations strong this morning

Newsgroup: rec.radio.shortwave
Date: 2006-11-12 15:12:59 UTC

...the point of attacking Iraq was to keep the oil in the ground.
Imagine how much you'd be paying at the pump if Saddam was still
running the country and Iraqi oil was on the market.? Attacking Iraq
and keeping Iraqi oil off the market was part of the plan formulated
in the energy summit Cheney doesn't want anyone to know about...

Get yourself a copy of WRTH and then you will know what these stations are.
Likely candidates are:
153 Bechar, algeria 1000 kw
180 Pelati, turkey 1000 kw
189 gufuskela, Iceland 300 kw

Have fun, good luck and keep DXing

Hi Shepherd:

Count it a blessing that you live in a rural location. The reasons
I say this is because I forgot to mention a particular quirk of the
SONY ICF SW7600GR. It, like most dididtal radios, has less than perfect
image rejection. I live in the inner city with numerous MW stations
within a mile or two of me. I get ghost images of these stations which
pop up in various places on the dial. Most radios choke on these strong
local signals though. Oddly, the best radio I have at rejecting images
is...don't laugh...a GE SR III. It, by the way, is my most sensitive
set and I would pit it against any radio costing twice as much for
overall performance. The sad thing about the GE SR III sets is the poor
quality control issues. If you can find a good one, it's a keeper.

But, I'm happy you are pleased with your SONY. I like mine too and
it's a great set for its size and price.

Yeah, its a shame that they all do not have the splendid military service as displayed by Rush Limbaugh (none) and Sean Hannity (also none), Karl Rove (also none) or our fearless VP, Dick Cheney (no service, but did bag an old lawyer friend on a hunting trip).

But what good is military service any more? The military gave up CW years ago, and nobody in the military practices or knows it any more. Just a bunch of CBers riding around in Humvees, right SC?

John - a longwave DXer associate of mine said they were all in eastern Russia because that is the only propagation path that is still completely in darkness at 1300 UTC. I would highly doubt that I could hear the ones you mentioned when it is daytime there due to typical LW propagation. I could be wrong, however.

Maybe it's webtv that won't allow you. Here's an excerpt from the Reuters story that the retards couldn't find (it's been all over the Sunday cable talkathons too):

"... even more said they were concerned about some of the actions a Democratic Congress might take, including 78 percent who were somewhat or very concerned that it would seek too hasty a withdrawal of troops from Iraq.

"Another 69 percent said they were concerned that the new Congress would keep the administration "from doing what is necessary to combat terrorism," and two-thirds said they were concerned it would spend too much time investigating the administration and Republican scandals."

You cannot condem a man just because he made a fool of himself over a
woman.
History, US society, and who knows, even your own family is replete
with examples of intelligent, successful men who became idiots when it
came to women and this in no way detracts from their value as
productive rational members of sociiety. As far as Art is concerned, if
it makes him happy to be happy, let him be happy.

Thanks for reminding me of the North Country! I had seen Yodar's note about them building him one, but had forgotten about it. I think I'd prefer the AMRAD or Dallas' design if the builder can do, but it's another option and only a little over $100 at that. While poking around the North Country site after reading your message, I came across this page in their tech section:

http://www.northcountryradio.com/Articles/actant3.htm

It is a clear, concise explanation of how and why to use a "Bryant type choke" and a seperate ground rod on an active antenna to knock down noise on the shield. The only critical comment I would have is they never actually call the noise common mode noise. You could save some typing by referring someone there :-)

> One variation I am going to try and build of Dallas' active dipole is

> Hard to put into words, but I ought to be very doable.

My problem is that since the Homeowners Association does all lawn and driveway maintenance, free standing things that require any extra effort to mow or trim around are frowned upon. Bird feeders need to be attached to home or deck.
As time goes on, and trees grow a bit, something in a tree with buried coax may be possible.

> The R8B is a SWEET receiver. 95% of the time anything I hear on
> the R8B I
> can hear on my R2000. But that other 5% of the time is heaven!

Yeah, right now it's on my "future budget list"..... How do you rate
its' synchronous detector vs what you have seen?

Free software will be issued by the University of Toronto next month to enable home computers to bypass censorship walls put in place by repressive governments and to make the computer invisible to monitors. This would be of interest to anyone with email contacts in any of these countries. This includes the US and Canada. The software is very sophisticated and the implementation uses nodes and trusted gatekeepers. The program is discussed in the Nov 13 issue of Macleans "Citizen hacktivist:." p.129/130. For further details go to
<http://psiphon.civisec.org>
and
<http:www.psiphon@citzenlab.org>

Although I couldn't find the article online, there is another article that might be of interest in the National Affairs section: " They Really, Really like Us." It contains surveys of world opinion including the US. Scroll down National Affairs and click "MORE" and look for the survey.
<http://www.Macleans.ca>

1381. Collins, Drake etc to Ft. Wayne

It looks like I'm going to the Ft. Wayne hamfest, will be there Nov 17 and
Nov 18 till about 1 or 2 PM.
I plan on bringing the following if there's any interest:
Collins 30S-1 $1600.00
Collins 32V3 $1600.00 spare final and matching Astatic T-3 mike
Collins 30L-1 $600.00 Round 2 spare finals
Collins KWM2 Round $600.00
Collins 651S-1 $1100.00
Drake L75 $1000.00 One 3-500Z with internal supply 160 thru 10
Central Electronics 100V $600.00
Cubic R-3030 dual communications receiver VLF HF $1600.00
ITT Mackay Marine R 3021A VLF HF $600.00
Hallicrafters SX 62A $200.00
Hallicrafters S-40B very clean $125.00
All items in above average condition, very little wiggle room on price as
they're going to eBay if not sold or traded.
I'll be driving I 44 Tulsa to St Loius and perhaps a bit beyond afternoon
Nov 16 and on Nov 17 driving I 70 to Indianapolis and I 69 to Ft Wayne
arrving early Friday afternoon. I might be able to stop along the way
depending on where and the time.
I'd also consider a trade on good acoustic dreadnought guitar from Martin
HD 28, Taylor 810 or 910 or Gibson or a good older 5 string banjo.
Let me know
Hank wd5jfr

Radio shack has ceased to be an electronics store long ago.
It is now just another redundant home electronics and telephone store.
I am amazed that anyone buys anything in there anyway.
If you need a telephone or a DVD player or similar you can
get the same item or better at WalMart for half the price they ask.
The people who staff it from local management to the pimply-faced
teenager wouldn't know WTF a resistor is, let alone a shortwave radio.
Heck, they have enough trouble looking up a replacement battery
for a cordless phone which are grossly overpriced as well.

In three years I see them declaring Bankruptcy and dissappearing
from the USA retail scene. Good riddence to as their recent management
all but killed off their most dedicated customer base years ago.

It's 03:45 now and they're playing a great old song..."Walking in the
Rain" I believe it's called. Great signal.

I don't model antennas because as don't see the need. A folded dipole is
well understood.

Very good observation. The supplies that are linear have transformers,
which have some weight to them are heaver than the more efficient
switching but RF noisy type.

"When I told Abbie Hoffman that he was the first one who made me laugh since Lenny Bruce died, Hoffman said, "Really? He was my god." The combination of satirical irreverence and sense of justice that Bruce and Hoffman shared was the real spirit behind the Yippies--a term I coined to describe a phenomenon that already existed: an organic coalition of stoned hippies and political activists who engaged in such actions as throwing money on the floor of the New York Stock Exchange, then explaining to reporters the meaning of that symbolism. Folksinger Phil Ochs summed it up: "A demonstration should turn you on, not turn you off." So when journalists link the Yippies with misleading bedfellows, at best it's careless shorthand; at worst it's deliberate demonization. Osama bin Laden wanted an aircraft to crash into the Pentagon. Abbie Hoffman merely wanted to levitate it." -- Paul Krassner, http://tinyurl.com/ehu3v

> cheap piece of shit back to RS !

I have an Eton- Grundig S350DL and am quite happy with it. I also recently purchased the RS 12-150 and am pleased with it also.

The reception is good in both and the sound is quite good.

For MW sensitivity I would give the edge to the 350DL and sound to the 12-150, but each serve my needs.

As for the size and weight of the 12-150 I know that it is listed as weighing only 15oz on the Radio Shack web site, but the one I have weighs 4lbs 11oz. without batteries and measures 9" w x 12 1/2" w x 4" d.

1422. Kommunist China sub secretly stalked U.S. fleet

Newsgroup: rec.radio.shortwave
Date: 2006-11-13 16:16:33 UTC
From: Republican <Rep@rnc.org>
Message-ID: <12lh6ipifb8eu0d@corp.supernews.com>
Source record: 97560

Kommunist China sub secretly stalked U.S. fleet

According to the defense officials, the Chinese Song-class diesel-powered attack submarine shadowed the Kitty Hawk undetected and surfaced within five miles of the carrier Oct. 26.

According to the officials, the submarine is equipped with Russian-made wake-homing torpedoes and anti-ship cruise missiles.

The incident is a setback for the aggressive U.S.-China military exchange program being promoted by Adm. Fallon, who has made several visits to China in recent months in an attempt to develop closer ties.

However, critics of the program in the Pentagon say China has not reciprocated and continues to deny U.S. military visitors access to key facilities, including a Beijing command center. In contrast, Chinese military visitors have been invited to military exercises and sensitive U.S. facilities.

Additionally, military intelligence officials said ADM. FALLON HAS RESTRICTED U.S. INTELLIGENCE-GATHERING ACTVITIES AGAINST CHINA, fearing that disclosure of the activities would upset relations with Beijing.

The restrictions are hindering efforts to know more about China's military buildup, the officials said.

"This is a harbinger of a stronger Chinese reaction to America's military presence in East Asia," said Richard Fisher, a Chinese military specialist with the International Assessment and Strategy Center, who called the submarine incident alarming.

"Given the long range of new Chinese sub-launched anti-ship missiles and those purchased from Russia, this incident is very serious," he said. "It will likely happen again, only because Chinese submarine captains of 40 to 50 new modern submarines entering their navy will want to test their mettle against the 7th Fleet."

> ...
>
http://www.globalsecurity.org/intell/library/news/2006/intell-061109-rianovosti01.htm
>

A few weeks ago, Amy Ridenour http://newsbusters.org/node/8070 decried the Washington Post obituary writers for writing a bitter obituary for ex-Congresswoman Helen Chenoweth, a "militia-friendly" and "extremist" conservative from Idaho who arrived in Washington with Newt Gingrich's new majority in 1994. She noted a communist spy from Vietnam drew a kinder obituary. That happened again Friday with the death of "charming" and "avuncular" East German spymaster Markus Wolf.

http://www.washingtonpost.com/wp-dyn/content/article/2006/11/09/AR2006110901967.html

The lower the life form , the higher Neo-Kommie Liberals heap the praise.

Coming soon...

Abu Musab al-Zarqawi - "an avuncular, people person who knew that you can't make an omlet without chopping off Infidel's heads. He was also a charming family man with a dzen or so wives and numerous concubines. His friend and confidant Moqtada al-Sadr says may he rest in pieces."

Mao Tse-Tung (note Hillary's collars)- "an avuncular, people person who knew that you can't make an omlet without murdering 100 million. He was also a great cook, world-class poker player, and a collector of early Americana."

Josef Stalin - "an avuncular, people person who knew that you can't make an omlet without murdering 50 million. He loved the opera, the ballet, and his original dream was to emigrate to the US and become a cowboy in the Wild West."

Ronald Reagan - "his avuncular persona was all an act. In private Reagan was rumoured to have personally murdered dozens on his Californian Ranch. Also personally started AIDS to punish Barbra Streisand."

NEVER,NEVER trust a liberal

"The Black Book of Communism" is a definitive book on not only the obvious but the obscure, of this most perverse social disease.

There are too many similarities, in America and elsewhere, today, which mirror Communism's groundwork: this being, the media's and the Democrat's utilization and dissemination of the "BIG-LIE" to meet their end, which, of course, is absolute power.

The Socialist-Democracies worldwide are suffering from this political schism. It is important for America not to slip into this malaise. so far, the loathsome Dems and their media have won the battle not the war. It is going to be a long hard slog.

"Socialism is the philosophy of failure, the creed of ignorance and the gospel of envy." -Sir Winston Churchill, British statesman (1874-1965)

1457. American Red Cross Tells ARRL It Wont Stop Credit Checks On Ham and CB Volunteers

Newsgroup: rec.radio.shortwave
Date: 2006-11-13 19:04:43 UTC
From: policy-ham <hamop_62@hotmail.com>
Message-ID: <1163444683.403237.35750@k70g2000cwa.googlegroups.com>
Source record: 97597
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.cb

NEWINGTON, CT, Nov 10, 2006 -- The American Red Cross (ARC) has attempted to clarify its policy to require background checks of its employees and volunteers, at least as far as the policy applies to possible credit checks. After the ARC announced the policy in July through regional and local chapters, Amateur Radio Emergency Service (ARES) members who support Red Cross disaster relief and recovery efforts began expressing concerns to ARRL. In some past incidents -- most notably the 2001 World Trade Center terror attacks and the 2005 Hurricane Katrina response -- ARES volunteers have had to badge in as Red Cross volunteers. In a statement to the ARRL November 9, Laura Howe, the ARC's director of response communication and marketing, stressed that, while background check applicants must give permission to conduct a credit check, the ARC has no intention of conducting them across the board.

"The Red Cross realizes some volunteers may have concerns about authorizing a credit check. Those concerns are understandable," Howe said. "But please rest assured that credit checks are only run in rare instances and are not a part of the routine minimum basic check the Red Cross performs on employees or volunteers."

Howe told the League that the 2005 hurricane season exposed her organization's weakness in the area of background checks, "as evidenced by publicized examples of fraud and waste." The "standard minimum check," she said, verifies the applicant's Social Security number and a search of the National Criminal File for the past seven years.

"While the Red Cross will never run a credit check on the vast majority of its employees and volunteers," she asserted, "it is important that this standard language is included in the consent form to protect our clients, volunteers and employees." Volunteers with questions about whether a chapter might need to delve further into an applicant's background should check with the unit administrator, she said.

The ARC has contracted with MyBackgroundCheck.com LLC (MBC) in Anderson, California, to handle the on-line background checks. Prospective volunteers visit a secure Web site, click on the ARC logo and submit name, address, Social Security number (or other acceptable government ID), telephone number, and date of birth. MBC notifies the applicant's local Red Cross chapter whether or not the individual passed the background check, but it does not share any personal data.

In a statement October 24, ARRL President Joel Harrison, W5ZN, urged ARES and other ham radio volunteers to tread cautiously and read very carefully what they are giving MBC permission to collect on behalf of the Red Cross, especially given the wide net being cast. Howe acknowledged that by signing the consent form, applicants do give MBC permission to "conduct a credit check or other investigation into an individual's background." ARES members are not obliged to submit to a background check, however; the choice to do so is a personal one.

Several ARES leaders maintain that they and their volunteers represent ARES when supporting the ARC as a served agency. "Our issue is not the background checking, but the fact ARC considers ARES members ARC volunteers," one ARRL Section Emergency Coordinator told ARRL Headquarters. An ARES District Emergency Coordinator suggested the ARC policy is too arbitrary. "The unfortunate thing is that if a member decides not to submit to this check, then that will hamper our ability to serve the Red Cross in an emergency," he said.

ARRL Field and Educational Services Manager Dave Patton, NN1N -- whose department supports and oversees the ARRL Field Organization -- believes the Red Cross stands to lose a fair number of volunteers because of the requirement -- and not necessarily just ARES volunteers. One national Red Cross official who asked not to be identified said the organization fears it's seeing "the beginning of a hemorrhage of hams" from supporting ARC operations.

The Statement of Understanding (SoU) between the ARC and the ARRL does not address the issue of background checks. It also is ambiguous on the subject of whether ARES volunteers automatically become ARC volunteers when supporting Red Cross operations and subject to a background check. The bottom line: The requirement extends to whomever the Red Cross says it does. While some Red Cross chapters will allow ARES member participation without requiring that they register as Red Cross volunteers, others will not. One West Coast Red Cross chapter official said the ARC considers ARES members as "non-registered volunteers" and, as such, they were not required to submit to background checks. In other locales, the same volunteers staff ARES and Red Cross organizations. The ARRL-ARC SoU is up for review in 2007.

The ARC's new policy "is a positive action," Howe told ARRL, and aimed at raising public confidence and trust in the organization's volunteers and workers. "The Red Cross certainly values its employees and volunteers, and our background check process is not intended to be a burden to those who play a vital role in our relief efforts," she said. "We believe that in order to maintain the trust of the American people and provide them with the best quality service, all Red Cross employees and volunteers must undergo background checks according to standards being implemented across the entire organization."

So what? This stuff happens all the time. I remember the Queenfish (SSN 651 - now in pieces spread across WA state) pulling into Pearl with her sail all covered up because she scraped the screw on a Soviet. The Kitty Hawk makes so much prop noise that a sub could be a few hundred miles away and still stalk it. Hell you could probably get a visual on a the Kitty Hawk at 500miles. If a sub hangs in her baffles (150-210 degrees relative) she wont hear it.

What's the difference between an end-fed dipole and a random wire?

Is an end-fed dipole really 'balanced'? If so, how is this balance achieved, and does the balanced nature of an end-fed dipole mean it doesn't require an rf ground the way a random wire would?

Thank you for your time.

I was at a presentation recently about the history of radio, and one of the presenters was from a company called Flex-Radio which produces a "blackbox" that you can hook to your computer, and receive shortwave radio. I looked up the cost, and it was around $1500. I was wondering if there was a "blackbox" that you could hook to your computer to receive just AM and FM, which might be priced in the fifty dollar range. I searched on the interent, but what I found was somewhat comfusing to someone who is not an expert.

Thanks

Tom

AM I'm not sure. FM yes and TV.

PCI computer cards or USB adapter can do such things.

Such as :
http://sewelldirect.com/tvtunervideocapturefmradiopci.asp
http://www.radioandtelly.co.uk/onyourpc.html
(links provided for the example ONLY).

Man are you wrong about the prices. The Boston Accoustics HD radio they
are selling for $399.00 I can get one at an electronics store on line
for $224 with a $100 plus cut and a $75
rebate, making the final price $224. Man what a rip-off. Their prices
come no where near to
prices you can get at the large electronic discount houses. But you
have to search for these bargains, and they're are worth. I agree with
the guy who said their salesman know nothing about electronics. They
give you a strange look when you ask them simple basic questions.
So long Radio Shack!

1486. COTHEN: Should I Be Able To Hear ?

Newsgroup: rec.radio.shortwave
Date: 2006-11-14 00:35:13 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <pI6dnVDjXrTdksTYnZ2dnUVZ_uydnZ2d@comcast.com>
Source record: 97626

Hello:

Should I be able to hear the COTHEN network conversations of the Coast Guard, or are they encoded, or do you need some ALE capable equipment to pick up ?

Would a normal, USB HF capable receiver do it ?

Thanks,
Bob

1487. My copy of Passport...

Newsgroup: rec.radio.shortwave
Date: 2006-11-14 00:48:04 UTC
From: Steve <sdaniel13@speakeasy.net>
Message-ID: <1163465283.972653.9840@f16g2000cwb.googlegroups.com>
Source record: 97627

Just got here today in pristine condition.

Interesting that they give the RF Systems outdoor passive vertical antenna a lukewarm 2 and 7/8 stars. I never used it, but have heard good things about it. They were more enthusiastic about the DX-One Pro (3 and 1/2 stars).

Surprised that the Eavesdropper trap dipole got 4 and 1/8 stars, though I've never used one and have no reason to believe that its praise isn't deserved.

At one point Passport says "5 stars is best for any type of antenna, but in reality even the best of compact antennas don't yet merit more than four stars when compared against long passive antennas" (p. 214). This sounds reasonable to me, though I'm not entirely sure what counts as a "long passive" and "compact". Is the Wellbrook ALA-100 (which received 4 and 1/2 stars) compact? It certainly can be compact, depending on how you set it up, but the incarnation of the ALA-100 tested by Passport was 40 ft in circumference. Would the ALA-100, thus construed, rank behind the 43 ft Eavesdropper dipole in terms of overall performance, or does the Eavesdropper not qualify as a "long passive" antenna?

No point in being persnickety, I guess, but I think it would be best to apply a single grading scheme to all antennas, be they long, compact, active or passive.

Steve

I don't need to. That's why we have President Bush. Now I should learned
arabic have if I had known Bill Clintoon and the democrats weren't going
to do anything about the terrorists before Bush got in.

That's the problem with democrats, they hate America, so they don't care
if terrorists attack us. Democrats would rather attack the Bible.

"Hello Antenna-Lovers,
How do dual-band antennas work? I bought a COMET
"SSB-7" antenna for my mobile radio. It worked great for a year or more
and then,trouble. I don't know "HOW" to trouble-shoot it.
Where on the antenna can I check for "continuity" or somewhere I can
look to find a "fault" of sorts.
It costs a bit more than a lower gain antenna. How can I trouble-shoot
it ?"

Just go get another one at Radio Shack.

Tnx, 73, Good luck in the contest.

No way to know how accurate the story is, as it was published by the
Kommunist Moonie Times.

But really, if they did, what is the problem?

Take a look at Radio Shark from Griffin Technology.

It is a radio that plugs into a USB port and allows you to listen to and record AM and FM radio stations. It also will record automatically if you leave your computer on.

I have found the software a little buggy, but otherwise useful.

Norm Lehfeldt

++++++++++
President Bush knows no code, in Arabic or any other language. In
fact, he has trouble with the prerequisite for CW, the alphabet.

How could you have faith in some bozo who never even learned the code
and yet claims to be the Commander in Chief?? Shouldn't he be sitting
on the floor?

>
> Thank you for your time.

The "di" in Dipole means two as in elements. A dipole has two 1/4 wave elements where a passing EM wave induces an opposing voltage or potential at its output terminals where the two elements meet.

The way an random wire works with a output terminal on one end of a (1) wire element is that it has to work against a counter poise or ground. As such the best potential at its output terminal is when it is a 1/4 wave electrically to a passing EM wave where the dipole would be electrically at 1/2 wave.

Now that you understand this you can understand that 1/2 wave random wire is a waste of time and that a end-fed dipole random wire makes no sense. Yes you can find it out there on the web. Plenty of confused people in the world.

They do use a single grading scheme to all antennas but you do have to
pay attention to the class of antenna so that you compare apples to
apples. The active antennas might range 0-3 where the full size passive
might be 2-5 so when comparing different active antennas you would want
a 3 and if you want the best passive antenna you want a 5.

But it's not a simple folded dipole.

Somewhere I may have modelling data on the T2FD, but I have more
pressing things to do today.

But whatever -- I don't know why you feel the need to beat on the
thing so much. The bottom line, for /me/, is that it works and works
well. In /my/ situation, it far outperforms a well-designed end-fed
wire.

So my advice to the original poster is, go ahead and try it. For that
matter, try slinky-dipoles, end-fed wires, whatever. See what works
for you, and give it a run.

The original poster can play games like using the resistor, opening
that end of the dipole, shorting that end of the dipole, whatever.
Let him decide what works best for him.

Let us take a look at the 2M 1/4 vertical on my car roof.
It is end fed, and while it is only half of the antenna, the metal
roof is the other "half".

A vertical HF antenna can be built with, dah, a vertical electrical 1/4
wave over
either very conductive, think salt water marsh, or an array of raidals.
The more the
better up to around 190 or so, Contrary to popular ham myth 16 radials
is barely
enough. 32 is better with 64 and moer starting to get there.

Of course it is posible to cheat and use an antenna tuner or "match
box" and
load nearly anthing. Of course just because you managed to get a 1.5:1
doesn't mean
you RF is really going anywhere.

For field day, an anual event held every June where hams take to the
field and pretend
it is an emregency and operate from improvised (and other) antennas. I
used to be
very active with 80M and 40M CW QRP and found out real fast that end
fed dipoles,
or end fed anythings worked much worse then true dipoles.

However I did operate with a 20M 1/4 wave vertical mounted on a large metal roof that
was simply killer.

An end fed horizontal single side of a dipole will be, generally, way less effecient
then a true dipole. By runing a counterpoise below the half of the dipole can, but not
always, improve performance.

And unless one is only interested in receiving one frequency, located in one direction,
such as WWV on say 10MHz, any sort of dipole is very likely to be way less then
ideal for general SWL work. In my life I have installed several dedicated WWV, WWVB systems, this was befroe GPS became as common and cheap as it now is, and while
logic suggested a dipole would have been a good idea, the fact that I was trying to
receive 2.5, 5, 10, 15, and once 20MHz meant a dipole's pattern would fragment,
for lack of a more discriptive word. To do the job right required mulitple dipoles,
and I found there was no easy way to combine dipoles without the varrious odd patterns combining for some really odd peaks and nulls. this required switches to choose between the 4 dipoles and 4 feedlines.
In the last situaiton I ended up going with an active (single ended) antenna. If I had to do it again I would almost certainly go with a active dipole.
Other SWLs have found loops to be an effective choice.

I think every new SWL gets hung up on dipoles, failing to grasp that for 99% of their
listening, dipoles would not be a good choice. Think about it. A dipoles best stength
is it biggest weakness. The built in peak and null. Peak broadside to the dipole,
null off the ends. But how do you rotate a true 80M dipole? So do you errect one for each
target station? That peak in one direction will be a null in another and just as likely to
be a null for the direction you want as a peak. In my situation I jump from frequency to
frequency, And the targets wil be at nearly all points of the compass. Very hard to
build a steerable, broad band dipole. A horizontal active dipole can be rotated, or a
pair of vertical dipoles can be combined in a Phaser to create an synthetic rotatable
antenna that gives the ability to peak and null. But we are getting very complex here,
and quite a leap from any "reasonable" antenna. While quite a leap, it

is what I plan
to have completed by Thanksgiving.

The average SWL will be well served with an antenna like the one DxAce
uses.

<http://www.iserv.net/~n8kdv/pics.htm>

Simple, inexpensive and will last for years. As their skill sets and
needs evolve, then
it would be reasonable to ponder more complex antenna. It is way too
easy to get lost
in searching for the "perfect" antenna before gaining enough experience
to understand
why perfection isn't needed.

Terry

> --
>
> Bart

When it comes to radiation patterns it is hard to calculate what is
really gonig on ,
and even harder to make meaningful measurements. Ground reflection,
amoung
many other things, makes a lot difference. Whne I was much yougner, and
I
expected to be able to make meaningfull measurements, I wasted several
weekends
by trying to measure the real pattern from a 20M dipole at about 30'
elevation and
a 20M vertical on a large grounded metal roof. I nver got results that
made any sense.

Your observation about power lines is correct. "Nearby" wires can
produce

pattern distortion beyond the abiltiy to calculate. One nice thing
about 6M
and up is the ease with which you can make readings that knid of relate
to
reality.

My 1/4 has a 6dB lobe toward the front because I drive a hatch back
Civic
and ther is moer surface metal toward the front. Of course the lobe
isn't
exactly straight ahead, but canted about 15 degrees to the right for an

unknow reason. The NEC modeling program prediction and measurements
in an open field agree to a impressive degree. And by using the remote
S-meter
in a local repeater and having it repeat the level as I drive a tight
circle confirmed
the theory and my measurements. But I still can't explain the lobe's
offset. The
antenna is centered to within a few mm. I thoguht maybe wiper blades so
I removed
them, then I thought BCB radio antenna so I removed it. No change.

Sadly at HF reality and theory have almost nothing in common. The nice
peaks
and nulls of a 10MHz horizontal dipole are seldom as distinct as the
graphs
shown in text books.

If it works then it is good regradless of what theory might say. Some
of my
first DX HAM contacts were on really bad, not effeceint, random
antennas,
When I started using "correct" antennas, dipoles for the most part, my
ratio
of heard and worked versus heard and not worked increased dramaticaly.
But
I still have a wide range match box with my QRP rig just in case I
can't errect
a real antenna. I once worked Scotland runing 5W CW on 80M into a
random,
~~100', wire wraped along a rail fence.

Hi, Frank - being in Tucson, are you relatively remote from most
domestic AM stations? Does that preselector help a lot?

I would love to listen to LW, but being near several blowtorches simply
does not help, for many reasons...

If you are looking for a "software defined" AM/FM radio than the answer is absolutely not.

The Flex-Radio is "software defined" and in a nutshell means it is constantly being improved and is upgradable with software.

Defenses on subs to be reviewed...

...defense officials said the submarine surfacing was a provocative action
by the Chinese military, which has placed a high priority on practicing
anti-aircraft-carrier operations against U.S. carriers and warships in
preparation for a possible future conflict over Taiwan.
...
The submarine encounter also took U.S. intelligence agencies by surprise
because of years of analyses that continue to portray a benign China, said a
defense official.

"Our China analysts appeared to be stunned that China would shadow a U.S.
carrier as far away as Okinawa," the defense official said.
...
The Japan-based Kitty Hawk and associated warships are the only Asia-based
battle group and would be the first to respond to a crisis concerning
Taiwan, which China has threatened with force in the past.

The encounter also was unusual because Chinese submarines normally do not
operate in deep waters, both officials said.

"From our standpoint, ... it shows that they continue to develop blue-water
capabilities," the Navy official said.
...
Adm. Roughead told reporters in Beijing yesterday that he hopes to better
understand the intentions behind China's naval buildup during his weeklong
visit.

"When asked if the PLA navy is a threat, I've been on the record as saying
no," the four-star admiral said, referring to Chinese forces, the People's
Liberation Army. "But I really would like to know what the intent is in some

of the developments that I see in the PLA navy."

Adm. Roughead is in China as the U.S. and Chinese militaries conduct a joint search-and-rescue operation exercise.

The visit is part of an ambitious program being promoted by the commander of U.S. forces in the Pacific, Adm. William J. Fallon, to develop closer ties with the Chinese military.

The program has been plagued by a lack of reciprocity on the part of China's military, which continues to refuse U.S. military visitors to key military facilities or to observe military exercise. By contrast, the U.S. military has given Chinese military visitors access to sensitive U.S. facilities and military exercises.

Also, China is continuing to block U.S. military officials from visiting a secret underground command center in Beijing known as the Western Hills.

Adm. Roughead is scheduled to meet Chinese navy commander Vice Admiral Wu Shengli and the commander of the South China Sea Fleet. Those talks could shed light on China's aggressive naval buildup.

"Clearly, the growth in the capacity and capability of the navy since I've first been exposed to it in the '90s, the ability to go into the blue water is very, very clear," he said. "I look forward to having discussions about what the vision is and perhaps what some of the operating doctrine might be."

William Tripplett, a former Senate Foreign Relations Committee staff specialist on China, said the failure to track the submarine was alarming.

"China's tracking of the Kitty Hawk, undetected by U.S. Navy anti-submarine warfare assets, is a shocking development," he said.

Good point! An excellent example of the above is
Trinity Broadcasting Network or "TBN" as it is called.
Right now it's their 'pledge week' where they have the
unmitigated gaul to ask for people to send them $100
or $200 or $500 or $1000 because "Jesus wants you to
sow your seed faith gift and receive a FINANCIAL BLESSING
in return...." What a load of vine-ripened horse shi+ !

You have to admit however that TBN does know how to rake in
the cash from all those people living in trailer parks all across
America! I mean they got the overweight sweaty black preacher
man, the tall & good looking white guy in the $700 suit, the
short blond haired 'golden boy' preacher who is concerned
about America and finally the fat bitch in the OUTRAGEOUS
HAIRDOO complete with mascara that runs down her face
when she cries the blues 'about the chill-drens'.

Couple all of this with a blues band and a sound stage backdrop
that looks like the inside lobby of a New Orleans Whorehouse
1 block off of Bourbon St and you got all the makings of a TRUE
GENUINE AMERICAN WHITE TRASH moneymaking machine
for Jay-zeeeeus!! (Praize da Laaawwwwwddddddd Y'all!!)

--> AND ALL WE GOT ON SHORTWAVE IS FREAKIN BROTHER STAIR !

I mean folks....I could just shit a brick. :)

yawn... sounds like the rhetoric that makes Iran our "enemy." The
Chinese don't need to have a future conflict over Taiwan. The US, led
by fruitcakes and thieves is busy destroying itself.

The Chinese could drive lemmings like you to your knees and make you
beg for mercy by currency or trade manipulations.

The US is busy selling itself off to Spain, the Netherlands, the
British royalty, the hated A-rabs and the evil Chinese. Why would they
want to hurt their property or the quasi-slaves who are making them
powerful and rich?

The probable meaning of it is that Jesus' brother Sun Myung Moon or his
pal George or the rest of the slime want some more cash. Maybe we
better pass a trillion dollar bill so they can buy up countries and the
Chinese laugh their ass off at the lemmings who are so easily led.

Watch out for the terrorists!

I've been hearing them from Western NY during the evenings on my Sangean DT-200V, some nights with a signal so good it almost sounds local. I listened to their election coverage (ridings in Winnipeg and Manitoba environs) a few weeks back and sent them a snail mail report the next day. I never noticed them on the dial until the beginning of this Fall. All of a sudden they just appeared one night and I couldn't believe my ears. I wonder if they changed their antenna pattern. It's not true DXing, but 1200+ miles on a pocket radio is kind of satisfying.

Communist Chinese online commentators recruited by various Communist state agencies are responsible for guiding Internet users toward the authority-endorsed opinions on important issues. They are referred to as the "Internet political workers," and are paid half a yuan (US$0.08) per message they write. Internet users refer to these commentators-in-disguise as "fifty-cents."

Inventor of the Web fears for its future

Sir Tim Berners-Lee, developer of the Internet's World Wide Web, is concerned about his invention being misused. He told the BBC that he was concerned the technology could be used to spread misinformation and "undemocratic forces." Berners-Lee said he feared that if the Internet was left to develop unchecked, "bad things" could happen.

>
>Thank you for your time.

There is such a thing as an end-fed Zepp; it's a half-wave wire with a
balanced feedline like 300 or 450-ohm ladderline.

These end fed Zepps were popular with the old Zeppelin airship radio
operators. Only one side of the balanced feedline is connected to the
antenna.

Look around the web for a diagram of one.

They don't require a ground, and an antenna tuner can be used for a
wider range of frequencies.

A random wire does require a counterpoise or ground if you're
transmitting, but when I had one up, it didn't seem to have much
effect on reception.

Bruce - I'm on a 1 acre lot in the desert about 6 miles from downtown Tucson and I have 2 AM stations within 2 miles of me. At night the power drops and they don't create any problems. I do get some LW intermod interference during the day but the preselector helps. I'm using an old Grove TUN3 passive preselector with a few mods and a Ralph Burhans design LW preamp between the preselect and receiver. It seems to work quite well. I'm trying to figure out how to lay out a 1/2 mile long wire into the local wash but I would have to cross someone else's property! If you have a 100 foot or longer wire, hook a series resonant tuner composed of a 365 pf varicap and a 5 to 10 millihenry choke in series with the antenna and the receiver. It will do wonders for impdeance matching and intermod.

Hello,

I bought this new Radio Shack 12-150 and was very disappointed with
AM performance. The GE super radio is way better on AM. You can't tune
in 1 kHz steps and there is some back ground noise. I own a GE Super
radio, a Sony ICF-7600GR, and a CC Radio, they are much better
concerning AM sensitivity and selectivity. I took this radio back,
don't waste your time purchasing it!

I also see poor AM sensitivity. FM is reasonable. The sound is good.

The tuning knob implementation is poor.

____
Hail Eris!
Demon Prince of Absurdity

"And no, I did not have sex with my son. But if I did I certainly
wouldn't tell you. Something so beautiful and precious should be kept
private." -- Kathy L. Mosesian, or possibly not really her, confesses
she may be a liar and committer of incest with her own son, in MID:
<cfcd3f4660694e3afeaadaa2723e9ab1@msgid.frell.theremailer.net>

The reporter asked Colin Powell (or George Bush), "What proof do you
have that Iraq has weapons of mass destruction?"
He replied, "We kept the receipts." -- Bill Hicks

"They thought I was fair game. I was an instrument of purpose to achieve
their desires and not 100 percent real and ALSO that they had me by the
short curlies because I thought that the world revolved around them and
therefore I think that I am fair game and rightly so. If they want to
play dirty, I get to too. It's not a one-way street. I will use the
physcial strength that I have over them, my superior 5'7-3/4" height
advantage, the boxing moves I paid to learn, the suprise of pussyfooting

up to them with their back to me in a public place 18 1/2 years after the fact and thus not only do will they not know that I am but a pica's distance away from them, but that I even exist on earth." -- Chris Tsao is secretly John Wentzky's psychic twin. MID: <1161246083.152300.195760@m73g2000cwd.googlegroups.com>

Looney Maroon nominee for August 2006 Johnny D Wentzky foamed:
"You never asked someone who goes into areas of the internet that are only for adults who has an underage id somehow or another if they are a cop posing as an underage person online?
I guess lots of people just don't watch dateline or read stories much. Why don;t you go to pervertedjustice,com and see what they do. They are awash in their self-proclaimed glory after they lied to membners of the public.
They are awash in their self-proclaimed glory after they posed as an underage person and agreed to do all sorts of sex acts wioth adult males, and they are adults posing as teenager themselves. They make themsleves into liars by falsely impersonating underage persons and by not fuilfilling the words they tell the victims online in their chats. Why don't you read it where they tell these victims of their deceit about how they have been with grown men and such? Why don't you read it where they say, "That would be cool." after someone makes an advance towards an adult who is posing as a teenager? And, where they agree to meet the person, etc.
Lost control, didn't you?
Is that why you feel as if you need to lie so much now? I see where lots of these false impersonation games are not sticking. They feel as if they can lie and then order the victims to get counseling in the gayblade, governmental, pro-choice tax leech counseling centers. They are doing nothing more than usury and fraud in many cases." -- Wentzky almost comes out of the closet as a pedo/ephebophile in MID: <H%%Eg.28916$Uq1.22411@bignews6.bellsouth.net>

President Bush controls the bombs, he doesn't need to know CW. He hears
where the terrorists are and then wipes them out or captures them.

It really pisses the democrats off when he does that. After the new year,
President Bush will have a war on two fronts, terrorists abroad and a
terrorist democrat majority in congress.

I haven't been able to hear omega one the last couple days when I had time
to listen, and I should have been able to hear it. Your antenna must be
sending the RF a different direction other than west. Even if propagation
is poor I'm usually able to tell if you're transmitting.

So we need CW to make sure that things are not dumbed down, but you
support someone in charge so dumb that he never learned CW when he
could have done so in the military?

You accept some no-coder making all the life decisions for SC?

You are confused. Go sit on the floor until you have it figured out.

Both radios only weigh on pound and are cheap pieces of shit !

1596. Radio Sonder Grense

Newsgroup: rec.radio.shortwave
Date: 2006-11-15 03:13:07 UTC
From: Charles C <dispos@fastmail.fm>
Message-ID: <eje0k4$284$1@news04.infoave.net>
Source record: 97786

I'm picking up Radio Sonder Grense, South Africa, on 3320kHz. I first tuned them about 2:30 UTC (11/15) and it is now 3:00 and I'm still getting a decent signal. They played some interesting sounding pop music and at 3:00 rolled into what sounds like a news broadcast. language sounds germanic. It is 3:08 now and they are playing Footloose in English. haha

The voltage is maximum at the center of a half wave dipole and zero at
the end. Is this enough of a further explanation for you?

alt.usenet.kooks - Pierre Salinger Memorial Hook, Line & Sinker:
September 2005 and April 2006

"K-Man's particular genius, however, lies not merely in his humour,
but his ability to make posters who had previously seemed reasonably
well-balanced turn into foaming, frothing, death threat-uttering
maniacs" - Snarky, Demon Lord of Confusion

"If the truth be known, the only reason Osama is still on the loose is
because he himself hasn't fallen victim to the K-Man." - Wog George

Thou dread prince of plackets. Thou dost over ween in all

The Conference of Bishops in the United States have announced a new
policy on preaching to gay and lesbian Catholics: It's okay to be gay
as long as you remain celibate. Then again, that's really not so
different from their policy towards everyone else. Basically, having
sex is a sin no matter what...so what's the difference if it's gay or
straight?

(The best part is I get to play Bishop, Priest **and** Altar Boy all in
one night!)

Hmm. That looks interesting. I've heard of ALE
but not COTHEN. I've google it and programmed
the frequencies into my receiver. I'll be monitoring
them over time.
It looks like the signals are not clear voice but
something should be audible with a normal USB
capable HF receiver.

You have to UNZIP it, to reveal five normal text files which can be read
by almost any word processor program.

If you have to use Windows, get something like this:

http://members.ozemail.com.au/~nulifetv/freezip/

Lots of choices...do a Google search on UNZIP

"Immorality: The morality of those who are having a better time." -- H.
L. Mencken

"Consider that language a moment. 'Purposefully and materially
supported hostilities against the United States' is in the eye of the
beholder, and this administration has proven itself to be astonishingly
impatient with criticism of any kind. The broad powers given to Bush by
this legislation allow him to capture, indefinitely detain, and refuse a
hearing to any American citizen who speaks out against Iraq or any other
part of the so-called 'War on Terror.'

"If you write a letter to the editor attacking Bush, you could be deemed as purposefully and materially supporting hostilities against the United States. If you organize or join a public demonstration against Iraq, or against the administration, the same designation could befall you. One dark-comedy aspect of the legislation is that senators or House members who publicly disagree with Bush, criticize him, or organize investigations into his dealings could be placed under the same designation. In effect, Congress just gave Bush the power to lock them up." -- William Rivers Pitt

"It has become clear in recent months that a critical mass of the American people have seen through the lies of the Bush administration; with the president's polls at an historic low, growing resistance to the war Iraq, and the Democrats likely to take back the Congress in mid-term elections, the Bush administration is on the ropes. And so it is particularly worrying that President Bush has seen fit, at this juncture to, in effect, declare himself dictator." -- Frank Morales
http://www.uruknet.biz/?p=m27769&hd=0&size=1&l=e&fark

"No man in History, including JESUS CHRIST, has directly revealed to the World the SATANIC WEAPON used to enslave mankind -- INTELLECTUAL THOUGHT!!" -- Ray Karczewski repeatedly proves his words in every post he makes

1614. Amateur Radio Emergency Service (ARES) Members -&- Credit Checks ?

So... What does a Credit Check ? ? ?
Have to do with your ability to Operate a Radio as an
Amateur Radio Emergency Service (ARES) Member ?
- - - Are People with Bad Credit / Poor Credit to be
denied the right to Volunteer in Times of Emergency ?
For Radio Amateur "Volunteers' - Souldn't a Valid Amateur
Radio License along with a Driver's License (or State ID Card)
and Social Security Card be the only Requirements ? ? ?

For that matter : What does a Credit Check ? ? ?
Have to do with any Pre-Employment requirement ?
- - - Are People with Bad Credit / Poor Credit
to be denied the right to simply have Jobs ?
For Job Seakers in America (the USofA) - Souldn't a Valid
Driver's License (or State ID Card) and a Social Security Card
be the only Document Requirements to Get-a-Job ? ? ?

can I get a radio check ~ RHF

- A dipole, as used by most SWLs, is unbalanced
- and has no CMR.

David can you expand on this comment ?

* Dipole is Un-Balanced {As used by most SWLs}

* Has no CMR.

David what is CMR ?

So, besides my posts, is the only other thing you have to look forward to
on a regular basis Bingo night?

SC

My friend, with your posts serving as a base
line,
who could ask for more ? Actually, I can't use my mobile HF rig since
I gave up my driver's license because of infirmity, so I am restricted to
a 2-meter net once a week, and SWL-ing when the local noise level
permits, so please keep up the good (?) work. k35454.

Are CBA, CBW and CBU the last 50 kw MW CBCers? Many years ago, when
radio drama was almost gone from the U.S. I used to listen to CBL or
CBM at 11 PM eastern after Shep on WOR.

CBK-540, Regina
CBU-690, Vancouver (DA)
CBX-740, Edmonton (DA)
CJBC-860, Toronto (French)
CBW-990, Winnipeg (actually only 46kw at night...)
CBR-1010, Calgary (DA)
CBA-1070, Moncton (has applied to move to FM)

There used to be some (CBO/CBOF on 910/1250 in Ottawa, for two) on
regional frequencies - I didn't check but I *think* they're all gone now.

Today out the blue I received in excellent condition a brand new free complimentary copy of Passport to Worldband Radio 2007.
Seems like their Jane Evans got wind of the fact that my original copy got dropped from the Boeing at 30,000 ft when it passed over Montagu - mwa Afrika's idea of speeding up airmail deliveries. Sadly it was graunched beyond belief and was difficult to read.

So a big bouquet to Jane and Passport for this friendly and unexpected customer service, much appreciated here.

I cannot understand why the many queries that come into this newsgroup don't buy themselves a copy of Passport, as for twenty bucks it is a bible of useful information for radio hobbyists, especially newness. It's got everything worth looking at from the fifty buck radio's and simple antenna's right up to excellent reviews of the heavyweight $4k serious tabletops. An outstanding buy and good value for what you get, written by highly experienced professionals.

Who appointed the judge that's sending Abramoff to jail so as to make it more difficult to interview him?
http://gatewaypundit.blogspot.com/2006/11/abramoff-offers-testimony-on-6-8.html

Al Qaeda, Iran, Hugo Chavez, N.Y. Times Celebrate Democrat Victory
http://www.humanevents.com/article.php?id=18042

Thanks largely to the left and the left wing media, al Qaeda senses we are losing the war on terror.
http://www.jamestown.org/terrorism/news/article.php?articleid=2370205

Democrats: Time to pay the piper - It will be a heavy price too.

After toppling the long-dominant Republicans in a hard-fought election, the Democratic Party's incoming congressional leaders have immediately found themselves in another difficult struggle - with their own supporters.

Some of the very activists who helped propel the Democrats to a majority in the House and Senate last week are claiming credit for the victories and demanding what they consider their due: a set of ambitious - and politically provocative - actions on gun control, abortion, national security and other issues that party leaders fear could alienate moderate voters and leave Democrats vulnerable to GOP attacks as big spenders or soft on terrorism.

Lobbyists for the American Civil Liberties Union, for example,
http://www.discoverthenetwork.com/groupProfile.asp?grpid=6145
are all but counting on Democrats to repeal the most controversial provisions of the Patriot Act, the anti-terrorist law pushed by the White House that some critics call unconstitutional. They also want to end President Bush's domestic wiretapping program.

"We are not going to let them off the hook," said Caroline Fredrickson, the ACLU's legislative director, of the newly empowered Democratic leaders in Congress. "We will hold their feet to the fire and use all the tools we can to mobilize our members."

Eli Pariser,
http://www.discoverthenetwork.com/individualProfile.asp?indid=2138
executive director of the political action committee associated with the
liberal [Communist] activist group MoveOn.org,
http://www.discoverthenetwork.com/groupProfile.asp?grpid=6201
warned that Democratic leaders would be ill-advised to ignore the party's
base.

"A huge number of people were involved in putting them over the top,"
Pariser said. "There's a huge group of people engaged and energized and
ready to support Pelosi and company when they boldly lead - and to hold them
to account if they stray."

A few weeks ago I called Progress Energy to report the malfunctioning streetlight in front of my house which cycles on and off all day and night effectively eliminating any sw listening. They said they'd repair it in three days, and when it hadn't been a couple of weeks later, I called again and was told their records indicated its repair. I assured them that the problem persisted, and after insuring they had the correct pole number, was told another request would be submitted for the light's repair. Well, it's been another week, and no luck. Any advice on reconciling this problem?

Pop open the base and unscrew the fuses that are in there?

The street lamps in New York have pigtail lampholders spliced in
there....with fuses. I guess removing those would disable the lamp.

So. Watch the PBS Frontline documenary, "The Marketing of Cool"
and you'll see that it's standard practice in the US, too. In this
case a PR firm set up an Internet boiler room where they paid
people to read "Internet Chat Rooms" and set the tone for a marketing
campaign to sell 7-Up soft drinks to the Hip Hop demographic. If they
did that for a campaign that had a budget of somewhere in the 10s of
Millions of dollars, imagine what the RNC is doing with it's billions.

I'm pretty damn sure that when things get political, there are operatives
for some Republican party affilate (think tank, PR firm) that try to "Set
the Tone" of the discussion here on Usenet. I've made some posting that
garnered some "you're lying, shut up" responses from anonymous untraceable
posters, that were in direct opposition with facts that later came out.
My best example was some responses I got from a posting after watching
the demolition of the statue of Saddam Hussein in Firdos Square*.

So, Mr. Dog, how much do they pay you?

(*In the live video I noticed a little arguement between a small group
of people at the plinth of the statue. There was an Iraqi flag fastened
to the base, but upside down. One of the group took the flag down,
turned it right side up and put it up again. My conclusion was that
those people were not Iraqis, didn't know how to fly that countrys flag,
and the whole thing was a setup. And six months later, that's what
came out in the press. Some Army Captain had paid for the demonstration,
which was just a Psy-Op ON THE AMERICAN PEOPLE).

No such luck. This particular lamp is a high pressure sodium type. No obvious means of disabling it, plus I'm sure that though they've mostly ignored me to this point, the power company would likely raise much hell if I screwed with their equipment.

Al-Qaeda/Neo-Kommie Doctrine for International Political Warfare

http://www.jamestown.org/terrorism/news/article.php?articleid=2370189

None of the foregoing events fall within the traditional definition of "diplomatic" successes, and obviously none is, in and of itself, a war-winner for al-Qaeda and its allies. Still, each of them clearly advances the goals of the doctrine for international political warfare that bin Laden established for al-Qaeda: the erosion of popular support for the war on terrorism among the populations of U.S. allies, and the gradual isolation of the United States. Al-Qaeda's leaders and those of the groups allied to or inspired by it will see this doctrine as making an effective contribution to their war effort. That view will be augmented if the party controlling both houses of the U.S. Congress changes because of the results of the mid-term elections on November 7, 2006

Fenton Communications: proudly shilling for Marxist guerrillas, radical environmentalists, and Cindy Sheehan.

Throughout the 1980s, Fenton Communications represented a number of Marxist governments and their supporters. Most prominent of these was the Sandinista regime in Nicaragua, which the firm defended against foreign criticism while casting its internal opponents -- the Contra guerrillas -- as "death squads." Using similar tactics, FC conducted publicity campaigns on behalf of Grenada's Marxist dictator Maurice Bishop, and El Salvador's Marxist-Leninist guerrilla organization, the FMLN ("Former Top Salvadoran Military Colonel and Intelligence Chief Reveals Inner Workings of Death Squads," reads a representative Fenton press release from the era.) Fenton Communications also championed the cause of Jennifer Harbury, a far-left attorney and activist who charged that her husband, a Marxist guerrilla in Guatemala, had been killed with the complicity of the CIA.

In Africa, Fenton signed on to represent Angola's MPLA regime, a Soviet puppet state. When anti-MPLA rebel leader Jonas Savimibi visited the United States in mid-1980s, Fenton, working for the Angolan government, placed ads in the New York Times and other leading newspapers denouncing him as "South Africa's secret agent." Overall, in the years between 1982 and 1993, Fenton Communications reportedly took in more than $3 million by representing leftist regimes, while David Fenton acknowledged earning $100,000 annually for three years from contracts with the Sandinista authorities.

Much more:

The "AM" stations moved to the FM band some years back in some major
municipalities. Actually, I thought it would have included more on that
list of yours.

The amusing thing is that here in Montreal, when CBC AM (now renamed
"CBC Radio One" moved to FM, there were complaints about reception problems
in some areas, so they took over another frequency for a secondary
transmitter. So much for the vaunted "better coverage" that they moved to
FM in the first place for. Meanwhile, I can get a non-local CBC Radio One
station on yet another frequency.

As a general rule that makes sense to do something like that in
advance. That way anyone who needs an ID has one when the next 9-11
happens. We need to have some sense that the good guys are coming
through the door rather than the baddies.

>

Should do it across the board because we unfortunately do not know one
another.

>
> Howe told the League that the 2005 hurricane season exposed her

> check," she said, verifies the applicant's Social Security number and a
> search of the National Criminal File for the past seven years.

Absolute nonsense. A background check would not solve the problems of
waste, fraud and abuse in the slightest. The biggest single problem
was that the states of Louisana and Mississippi as well as the federal
government did not have the structure set up in advance to manage a
disaster of the proportion of Katrina. Doing background checks of

volunteers would not have had any effect on the waste problem. Having
the process set up to vet contractors who would help in the emergency
services and rebuilding afforts would have helped minimize the wqaste
farud and abuse problems. But in a disaster of this magnitude there
will be people who make it through any vetting process because the push
is on to respond. And since we are talking about volunteer radio
communicators what possible impact would they have on spending
excesses.

That's a gutless response. Do it 100% and get on with the real work.
Or do away with the requirement.

>

I agree. One should consider this requirement very carefully because I
would be concerned that Red Cross may not have the information security
systems set up to control such confidential data.

You think that would work? I can hear that thing all the way down to 30kHz and up to 60mHz, and it's impossible to null out because it's so close. I think if I was a ham, the added clout could probably get this done more quickly. I guess the only option I have is to make more noise.

Yeah, I had a similarly quick response to a noise complaint back in Raleigh, in fact within the same day. Perhaps it'd be to my benefit to mention that it's an interference issue, as I merely reported the light as faulty. I just think it's odd that I've been told the light would be fixed, in fact, that it had been fixed. I don't know if there's just a misunderstanding, or if these guys are simply incompetent. After having lived in Wilmington for two years, I'd presume it was the latter, but who knows.

As much as that would please me, I'm sure after my incessant complaints it wouldn't take them long determining who was to blame. I've just contacted them for hopefully the final time, mentioning the degradation of my radio communications due to interference, which will hopefully be construed to my benefit. We'll see.

The page is another Frontpagemag disinformation page. How many times does your Commie leader have to get caught fabricating BS, before you figure it out. Horowitz hates free speech, hates just about everything about America.

Over and over he gets caught just making shit up, but he never stops whining about "the left." Of course if you use the term in its classical sense, Horowitz is a radical leftist. The dolts and lemmings who slurp up this poison can't seem to figure that out.

Good to see you defending terrorism though, which is what that little whine-a-thon about the Sandinistas was.

RHF, either astonishingly retarded or completely dishonest. I say the latter.

Its hard to believe that anyone still believes Karl Rove's
disinformation campaign that Al Gore said he invented the internet.
Just about anyone who breathes knows he didn't say that.

But the biggest irony is that Berners-Lee was one of the people who
came to the defense of Gore's statement, calling it accurate.

Report this to the FCC. If you know an amateur in your neighborhood get
them to complain to the FCC thus sic ing Riley Hollingsworth on them.
At least that part of the FCC is willing to threaten and then fine them
for interfering with radio communications.

This is perhaps the best reason to get a ham license. While I hold an
extra
class, I may use it twice a year during bad weather events. But it
gives you
some clout when dealing with the cable, telephone and power companies.
As station licensed by the FCC you get some minimal level of help from
the
FCC toward solving noise issues.

Plus in my case with the noisy power meter I think my offer to see what

10000AM would do to it helped the chief engineer arrive at the correct
choice. Because I am certain I would have smoked that sucker and kept
somking it until they fiexed it. If you ar lucky and can find who makes
the
light you may be able to find a service or installation manual on line
that
mentions part 15 and your are home free. They hate to have the rules
tossed in their face.

Another option might be, if it is a regular street light on a fragile
aluminim
pole, to get a red neck friend to knock it over about 3:00AM. Easy, way
too

easy to do. Don't ask. Lets just say a Honda CB350 can knock a street light pole down and suffer minimal, as in hard to find, damage.

Some day if I get my nerve up I might post my imaginary RFI stories patterned after the BOFH. None of it is true but it is fun to think about.

Terry
